American FIELD SEED BERRY'S

CONSOLIDATED WITH

COMBINATION 1953 CATALOG AND SEED GUIDE

MERGING AMERICA'S TWO GREATEST SEED HOUSES

CONSOLIDATION ANNOUNCEMENT FOR BETTER SERVICE— GREATER VALUES TO CUSTOMERS OF BOTH COMPANIES

• The Berry Seed Company is proud to announce that the American Field Seed Company of Chicago has joined forces with it. The savings in operating expenses will be substantial and they will be passed on to customers of both companies. The Chicago retail store is operating as usual at 2929 West 43rd Street but mail order offices will be in Clarinda, Iowa, only. Eastern mail order shipments can be made from Streator, Illinois or Marion, Ohio. Address all mail order correspondence to Clarinda, Iowa, only.

BERRY SEED CO. Clarinda, Iowa

BETTER STANDS-STRONGER

ARE REPORTED BY THOUSANDS OF FARMERS FROM ALL OVER THE NATION WHO PLANTED

THE MOST ECONOMICAL SEED YOU CAN SOW

You buy seed because you want a growing crop. To get that the seed must produce strong growing plants. The more the better. No matter how nice your seed looks or how high its germination test is you lose your crop if the seeds don't produce plants.

Our tests and the experience of thousands of farmers show 15% to 150% more plants from Gro-Coated Brand seed than seed not so protected. This applies to all legumes and grass seed, sorghums and corn. Any seed that will produce such results is more economical to use because heavier stands mean more profit for you. The superiority of such seed is self evident.

EXTRA CROP INSURANCE Tremendous Increases in Stands

There are a number of factors that have their effect on getting stands of grass and clover. Seed bed preparation, depth of covering, quality of seed, drouth, etc., have a bearing on results. However, all those things may be ideal, you can sow the best seed and still have a failure. The cause of this is explained below. Disease and rot organisms that are on the seed cause the failure. These are generally most active if you have a period of cold wet weather after seeding. We can't control the weather but we can check these diseases. That is exactly what is done when seeds get Gro-Coat protection. That is why you get better stands.

Gro-Coated Best Yet

I think your Gro-Coated seed is the best thing yet. I had a lot of Alfalfa and Clover in my Oats straw this year, and I attribute the faster growth to the Gro-Coated seed.

Clyde Beaulieu, Holcombe, Wisc.

Gro-Coated Seed Is Stronger

The crop from Gro-Coated seed grew more vigorously and didn't die in hot weather. I think the treated seed is stronger seed.

Ethel Carr, Greenfield, Iowa.

First Good Seeding

This is the first time I have ever had a good seeding in a heavy crop of Wheat. It made 42 bu. per acre. I believe the Gro-Coating of the seed caused the crop to come through. C. Woodward, Tecumseh, Mich.

No Rain But Good Stand

We sowed Gro-Coated Alfalfa seed. It came and produced a very good stand. Alfalfa seed sowed under similar conditions before made no stand.

M. D. Slaymaker, Warsaw, Ind.

Gro-Coated Seed More Vigorous

Gro-Coated seed not only gets you a better stand, but grows faster and looks more vigorous and thrifty.

J. O. Bartels, Blythedale, Mo.

Gro-Coated Best Ever Had

Gro-Coated Red Clover and Grass Mixture seed produced an excellent stand. The best I ever had. I sure want it again if I can get it.

Bailey Farms, Marietta, New York.

Gro-Coated Amazes Neighbors

My neighbors wanted to know what I did to get such a good stand and why my Alfalfa looked so much thrifter than theirs. I told them that it was Gro-Coated.

Paul Will, Murphysboro, Ills.

Gro-Coated Clover—First Stand in 4 Yrs.

This was the first stand of Clover I got 4 years in a row. Lots of people here never got a stand of Clover this year, but mine grew vigorously. I will insist upon Gro-Coated seed in the future.

Arthur B. Graham, Pawnee City, Nebr.

Gro-Coated Seed From Now On

Last spring I sowed Gro-Coated seed and certainly have a wonderful stand. It has grown very rapidly. From now on I will sow nothing but Gro-Coated seed.

Fred Thompson, DeGraff, Ohio.

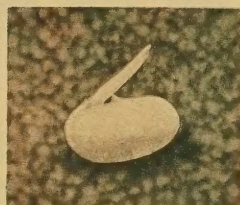

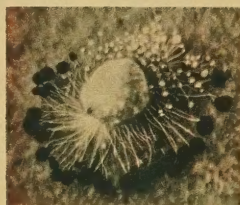

Gro-Coated Is Insurance

Your Gro-Coated cost very little. We think it is insurance in a farmer's seeding. Our Gro-Coated Alfalfa grew much faster than non-Gro-Coated seed. The plants have more pep and vigor.

S. C. & C. L. White, Bigelow, Mo.

WHY SEEDINGS FAIL

A highly magnified actual photograph showing disease organisms destroying seeds in the process of germination. This does not happen to Gro-Coated Brand seed. The seed on the right is Gro-Coated and entirely free of disease.

What Happens to Seed After Sowing

These seed killing organisms are fungi. They generally enter the seed while it is germinating. Many seeds have little cracks or breaks in the seed coat caused during harvesting. The disease enters through these cracks or through the opening in seeds at the place where they were attached to the plant. They live off seed like a tiny mushroom until the seed exhausts its life. The seed then dies and rots.

This can and does happen to the highest germinating seed. While we protect our seeds we cannot increase the germination of the seed. It is impossible to make a dead seed live but we can give the live seeds a better chance of making a living plant. That means thicker stands. That's what you are after. Why take chances with high priced seed when you can get Gro-Coated brand seed at little or no extra cost per acre.

Healthy Seeds Make Stronger Plants

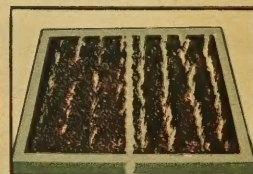

Every farmer knows that a healthy young pig makes fast growth. It's expensive to make a big hog out of a runt. That's true of all animals. It is also true of plants. Some diseased seeds may not die but produce poor plants. We have reports from thousands of farmers who say not only did they get better stands from Gro-Coated brand seed but that the plants seemed to grow faster. Some reported the plants came up quicker. All of those things added together mean better profits to the farmer who sows such seed. That is why ordinary seeds are more expensive to sow. You take more risk when you use them. Some farmers sow less Gro-Coated Brand seed per acre but the best way is to make a normal seeding and figure on getting thicker stands.

EXPERIMENT STATION TREATED

Iowa State Experiment Station in the December 1951 issue of their magazine "FARM SCIENCE" state that, "losses from many plant diseases can be avoided by always planting treated seed for better stands of healthier plants." They apply this to grasses and legumes as well as corn and small grain.

The Colorado Station reported they got highly significant increases in stands of grass and Alfalfa.

BEWARE of IMITATIONS

Since we pioneered Gro-Coated brand seed others are beginning to realize that a new era in seed preparation is here. There will be imitators but only Berry and certain other seed houses are licensed to sell the genuine Gro-Coated Brand seed. It will pay you to insist upon getting the GENUINE GRO-COATED Brand. It is different from other "Seed Treatments."

This Gro-Coat protection is more than an ordinary chemical protection. A combination of fungicides are used. It is based on a private formula which we consider the most effective yet developed. It provides almost perfect control of the seed rotting organisms. It does not injure the seed in any way. In fact our test shows that Gro-Coated Brand seed carried over two years will have higher germination than the same lot of seed carried over without that protection.

In addition we incorporate a root growth stimulant into our treatment which is designed to increase root growth. A big healthy root system should help all plants. See picture of corn root development on page 7.

OUR PRICES ARE ALL FOR GRO-COATED BRAND SEED

This exclusive seed protectant is now very well proven. It has been grown on tens of thousands of farms in the nation. Reports that have come to us are 99% in praise of results they got. We feel that it would be a disservice to our customers if we did not sell this kind of seed and this kind only.

It costs money to apply this protection. It means an extra handling, the material we use is expensive. There are many added costs. Naturally we add it to our price. Remember that, when you compare prices for even with Gro-Coat Brand protection our prices are often lower. Our direct-to-you policy made that possible. At most the extra cost of sowing Gro-Coat Brand seed will not exceed 15c to 25c per acre on most crops. You'll find this to be the wisest seed money you ever spent. It is not only the extra insurance you have on saving your investment in seed. More important is the crop you expect to get from that seed. That is why our customers say "I want nothing but Gro-Coated seed in the future."

You wouldn't think of planting corn that had not been chemically protected. Now you can get this protection and more on all grass and clover seeds. These seeds cost you more per acre to sow than the cost of planting seed corn. Why take chances?

Gro-Coated Far Ahead

I got a wonderful stand of Alfalfa and Red Clover from Gro-Coated seed. My stand and growth is far ahead of my neighbors who used non-Gro-Coated seed.

Frank Sullivan, Salem, Ind.

Gro-Coated Clover Nicest Ever

I had a much better stand of your Gro-Coated seed, yet used 10% less seed. I had the nicest stand of Clover I have ever had, and will buy only Gro-Coated seed from now on.

P. T. Helfrich, Bucyrus, Ohio.

Sweet Clover Stand for First Time

On one of our farms we have never been able to grow Sweet Clover. Last spring we sowed Gro-Coated seed and had a fine stand. We only sowed 6 lbs. per acre.

John J. Stricker, Charleston, Mo.

Gro-Coated Alfalfa Best

In April I planted 8 acres of Gro-Coated Alfalfa seed. I have already taken off 3 crops and the 4th crop is about 10 inches high. It beats anything I ever saw.

J. C. Rice, McCook, Nebr.

Gro-Coated Alfalfa Thick and Fast

The Gro-Coated Alfalfa is as thick as it could stick on the ground and grew very fast. I think Gro-Coating is wonderful and it sure pays to get it on your seeds.

Carl Pelger, Beardstown, Ills.

Will Use Gro-Coated Only

I compared the results from Gro-Coated seed with non-Gro-Coated. The crop from Gro-Coated seed grew ranker and taller. I will use nothing else regardless of cost.

Tom Huyck, Edmore, Mich.

Gro-Coated Surpasses All

The Gro-Coated seed I purchased last spring surpassed anything I have ever tried both in stand and growth. I sowed some this fall, and now have a green carpet all over the field.

H. L. Van Sickle, Farmington, Mo.

Gro-Coated Alfalfa Better

I sowed Gro-Coated Alfalfa seed this spring and got an excellent stand. I consider it grew better than non-Gro-Coated seed. The Alfalfa is making a very thick growth.

Wilbur Bell, Cedar Rapids, Iowa.

Only Gro-Coated Seed From Now On

I sowed Gro-Coated Alfalfa seed at a lighter rate than usual and have a very nice stand. From now on my orders will be for Gro-Coated seed.

Frank J. Fischer, Wacoma, Minn.

Gro-Coated Far Superior

I sowed all kinds of Gro-Coated seeds last spring. Also sowed some non-Gro-Coated seed, but your Gro-Coated seed was far superior. We got better stands, quicker growth and heavier foliage.

Mrs. A. E. Cerveny, Prairie Grove, Ark.

Certified

NEMAHA SEED OATS

Has Outstanding Characteristics

This beautiful oat was developed through the combined efforts of the Iowa, Nebraska and Kansas Experiment stations working with the U. S. D. A. It is a selection of crossing Victoria-Richland with Morota-Bond. It requires much painstaking work to develop a new variety. Thousands of selections are made and discarded before one is found with the desirable characteristics and no serious defects.

The grain is big and meaty. You will be especially delighted with the beautiful appearance of our Gro-Coated seed oats. They receive an extremely heavy grading and are now all protected by a special Gro-Coat formula developed for seed oats. The straw of our Nemaha oats is very heavy and strongly resists lodging. They grow about as tall as Clintons and are about two to five days earlier in maturity. Generally the grain in color is light to a pinkish ivory or pinkish with a yellow cast. The hulls are very thin which means greater feeding value. You get plenty of straw. They stand up well, even when dead ripe.

The Nemaha oat is resistant to helminthosporium (Victoria) blight and to the common races of smut, crown and stem rust. It has proven to be an exceptionally heavy yielder of plump, high testing grain. This oat has tolerance for both races 45 and 57 rust. According to one report from one of the largest processors in the country it has a larger vitamin B1 content than any other oat. We guarantee our certified Nemaha oats, Gro-Coated Brand, to be the finest quality you can buy. The price you will find surprisingly low.

Non-Certified Gro-Coated Nemahas

Our non-certified, Gro-Coated, Nemahas are unsurpassed for quality. They were grown from varietally pure parent stock. They are cleaned and graded by five separate processes. They will be Gro-Coated by our new special Gro-Coat formula for oats. We guarantee our Gro-Coat Brand non-certified Nemahas to be superior to most certified Nemahas, being offered for sale today. See Item 169 on our price list.

State Certified Nemahas

Our State Certified Nemahas are grown on specially selected fields in both Nebraska and Illinois. Although the standards for state certification are a 99% purity, after our special processing we find that most of our lots of certified Nemahas come back from the state with tests as high as 99.90% pure and the germination quite frequently go from 95 to 99%. We offer you state Certified at its best. Of course our certified Nemahas will be protected by our new special Gro-Coat formula for oats. See Item 170 on our price list.

FOUNDATION SEED STOCK

For the Production
of Certified Seed

The new certification rules that are now being adopted in many states require that a seed grower who wants to produce certified seed stock must produce it from foundation seed. Foundation seed is kept extremely pure and carefully rogued so as to eliminate off types and thus keep the variety just as true to name as possible. Naturally it costs more to produce this foundation seed stock and its sale is more closely regulated. We have been fortunate in acquiring a limited amount of Nemaha foundation seed stock. That's a step above certified seed. If you want to produce certified seed be sure to buy this foundation stock. Because of the scarcity we think it best to limit the orders to 30 bushels, so if you wish some of this very finest seed stock, please order at once. See Item No. 168 on price list.

The Great New...

MISSOURI O-205

STATE CERTIFIED SEED

A Highly Recommended New Variety

You, no doubt, have read about this variety during the past year, and you will be hearing more about it as spring approaches.

The Mo. O-205 Oats were developed especially for areas where the Columbia oats had been largely grown. They have proven themselves adapted not only to that area but throughout the entire oat belt. This variety has been outstanding.

It was reported as the highest yielding variety in the U.S.D.A. nursery test in 13 states with a yield of 66.4 bushels per acre compared with 53.9 for Clinton. In Iowa tests, this variety produced 73 bushels per acre in central Iowa location as compared with 67 for Clinton, test weight run 3 pounds per bushel heavier. Maturity is a little earlier, the straw is slightly shorter, but only by about two or three inches. The finest characteristics of this Mo. O-205 oats, are the extremely high yielding ability, plus the heavy test weight. The grain is borne on a good stiff straw. It has resistance to crown rust, stem rust and Victoria blight. Perhaps one of the most important characteristics is its resistance to the new races of Crown rust and Stem rust which are now infesting some of the other well known varieties. We strongly recommend to you that you sow at least a portion of your acreage to this variety. If these new races of rust come into your area they can be thoroughly damaging and may give you a very substantial reduction in yield. Where you have Mo. O-205 Oats in your production you are assured of having some good seed oats available.

Our seed is certified stock. When a new variety first comes on the market, the demand is always the greatest for certified seed. That gives you complete assurance of varietal purity required by state certifying agencies, and also the good quality from the standpoint of germination. The Mo. O-205 oats therefore, that you will obtain from us will give you the finest quality available.

These seed oats are not as nice to look at as some of the other varieties of oats. The color is not quite as attractive. It is a sort of grayish-white. This is due to the Columbia parentage. For just strictly eye appeal an oat like the Nemaha, described above, or one of our Clintons, or Cherokee would look nicer. However, where you have a serious infestation of these new races of crown and stem rust, these other varieties are not as resistant or as tolerant to it. We therefore, urge the growing of this variety because you don't know how soon these diseases are going to hit your area. If that happens in your section you will thank us for urging you to sow these certified Mo. O-205 Oats.

This variety is still in extremely short supply. These oats have been selling through agents for prices ranging up to \$8.00 a bushel. Remember when a new variety of merit such as this is available Berry's will always have it at prices way below what most others are asking. This is not Gro-Coated Brand but Certified. Sacked 3 bushels per bag. Supply limited so please order at once. See Item 165 on price list.

Dear Sirs:

The Gro-Coated Hubam Sweet Clover grew to a height of 4 feet 3 inches when cut early in September and is making a new growth. Had wonderful germination.

Appleton, N. Y.

D. J. Mandelare

Gentlemen:

I have cut 11 acres of Honest John Alfalfa so far this year. I've cut about 20 tons from 2 cuttings and still have a third cutting to make later.

Palmer Hargrove

**Golden
Beauty**
BRAND

Berry's Special EXTRA HEAVY CLINTON OATS

**Guaranteed to Outyield any
other Clinton Seed Stock**

CLINTONS AT THEIR BEST

We have done a lot of experimenting with seed Oats. Through this experimenting, we have developed a special grading process. Insofar as we know no one else has ever used this method in exactly the same manner or degree that we have used. This method removes at least 30% of the Oats from the average seed harvested. This goes far beyond the requirements for cleaning certified seed. This special handling shows up in the crop to a very noticeable degree.

RESULTS OBTAINED

We sowed our Golden Beauty brand of Clintons next to certified Clintons and they looked like a different variety of Oats. The soil was the same, but the Golden Beauty brand stood about 6 inches higher in the field. Many farmers sowed those Oats and we have yet to hear from one who was not enthusiastic. Some of our most prominent farmers in this area who grow different varieties have told us our Golden Beauty brand Clintons were the best they had on their farm. Yield increases of 10 to 15 bu. per acre were reported.

In the official Story County Iowa yield contest, these Oats were first and about 15 bu. ahead of the second best which were Cherokee. Certified Clintons were third. Many farmers spoke to us early, to be sure of getting some more of this seed for next year. Very few dealers are set up to process Oats as we do our Golden Beauty brand. Those who have seen it grow figure they are money ahead by feeding their own crops and using this specially graded seed.

CHARACTERISTICS OF CLINTON

A number of different Hybrids have been developed in the past few years. For a consistent performance over the largest territory, we consider the Clintons still in the first rank. Produced up to 123.8 bu. per acre. Fine, meaty, thin hulled grains. Strong straw that stands up even after grain is dead ripe. Widely adapted to different soils and growing conditions. Highly disease resistant. Resistant smut, most traces of rust and perhaps most important of all, resistant to blight. That is what has caused such tremendous damage to many of the older varieties in the past few years. You can't afford to take chances. The extra profit in these Oats is a big thing.

MORE BUSHEL PER ACRE GUARANTEED

In preparing our Golden Beauty brand of Clinton Oats all of the small weak immature kernels are eliminated. You get the strongest largest grain. They are the kind that make vigorous big healthy plants. It is true that a pound of this extra stock does not contain as many grains as the small seeded kind. Therefore you should sow at a fairly good rate of around 2½ bu. per acre. We have seen what these Oats can do, and back up our belief in their superiority with this guarantee. "Sow Berry's Golden Beauty Brand Clintons next to any other Clintons. Keep a record of yields at harvest time. If our Golden Beauty do not outyield the other, we will refund you the difference between what you paid us for our Oats and the cost of our ordinary non certified Clintons." Therefore this brand will cost you no more than our ordinary Clintons unless they yield more per acre. You take no chance whatsoever on your extra investment. You have every assurance of getting much larger profit.

GOOD GERMINATING SEED SCARCE

A lot of the Oats that were harvested last summer are not too strong in germination. Don't take any chance on sowing seed that does not test high and strong in germination. Our seed oats are largely of our own contract growing. Every lot gets a very accurate test, so we know they will grow well. The extra money that you spend for better seed, will come back to you several times over in the way of increased yields. Compared to some seed that will be sown this spring, it will mean the difference between success and failure. It will pay you to demand Berry's Golden Beauty brand. See Item No. 174 on Price List. This seed is GRO-COATED.

OTHER CERTIFIED CLINTON SELECTIONS

CERTIFIED CLINTON RE-SELECT

The Clinton Re-Select Oats is a variety or strain that has been selected from the original Clinton production because it showed improvement over the old. It is recognized as a distinctly different variety and is certified under this new name, Clinton Re-Select. Other States also have made such selections and called them by different names, such as Clinton 11 and Clinton 59 which are also described on this page. They are very similar to the Clinton Re-Select, but in our opinion the Iowa Re-select is the best of the three.

OUTSTANDING ADVANTAGES

This variety ripens more evenly than the ordinary Clintons. It has straw that stands up even after the grain is dead ripe. The grain has thin hulls giving higher feeding value. This variety is adapted to Illinois, Ohio, Indiana, Minnesota and to all of the spring oat areas.

STATE CERTIFIED SEED

Our Iowa-Re-select are all State certified seed. But please keep this in mind that Berry's certified seed is superior in grade to regular certified seed on the market. To meet certification standards, seed must have high varietal purity, free of noxious weed seeds and of good strong germination. See Item No. 177 on Our Price List. The seed is GRO-COATED.

NON CERTIFIED CLINTON

We also have extra fine, heavy graded GRO-COATED Non Certified Clinton Oats at very attractive prices. See Item 178 on Price List.

CERTIFIED CLINTON 59

Different States have been working on the Clinton Oats to make some refinement especially in the way of more even maturity. They have endeavored to produce a better Oat plant selection, rather than through the special grading such as we use in our Golden Beauty brand of Clintons described at the top of the page. There is no question that this selection has brought with it improvement. The Clinton 59 is a selection that was made by the State of Indiana. The Clinton Re-Select described to the left was developed by the State of Iowa. The stock which we have is genuine certified Clinton 59 and is top quality, heavily graded, blue tag seed. See Item No. 175 on Price List.

CERTIFIED CLINTON 11, SELECTION 25

This is a selection out of a Re-selection and represents perhaps the greatest refinement in the variety. In Illinois where this work was done this variety has a tremendous popularity. It is so widely adapted that we can recommend it as a splendid selection for the spring oat section wherever Clintons are grown. We are indeed fortunate to have such a fine supply of State Certified seed this year, when good seed oats are really scarce. See item No. 176 on price list.

Dear Sir:
I can truthfully say that I don't believe I could possibly get better service or seed anywhere else. I would recommend Berry seed to anyone.
Very truly yours,
Clarence W. Graham

Devon, Kans.

Dear Sir:

I have bought all my grass from Berry's for the past 10 or 12 years. Have always been well satisfied. There is no question about saving money. I always receive my seed in due time, and in perfect shape.
Very truly yours,

Carroll, Ia.

Henry W. Engelen

Improved Quality-Heavier Grains-Bigger Yields

GRO-COATED[®] BRAND SEED OATS

INCREASES RESULTS

The sensational performance of Gro-Coated seed has been clearly established. Its value has been demonstrated on tens of thousands of farms. Seed oats, however, required a different formula than that used for Clover and grasses and corn. They have not been Gro-Coated before. Now we have developed a special Gro-Coat formula that also gives splendid results on oats. It gives a high measure of control on the fungi that may interfere with the germination of the oat and in the formation of the plant. It also helps to control some of the diseases to which the plant may later be subjected.

We therefore feel that this year our value in seed oats is greater than ever. Our seed stock is prepared by giving it a very heavy grading and putting it through several processes that make a product which is truly the very best that money can buy. Such seed oats will give far better results than the average kind of oats that are sown. In addition to this fundamental high quality, we give you this Gro-Coat protection, so that you get a combination of values that very definitely gives you greater assurance of satisfactory returns.

JAMES HULLESS OATS

This is the newest variety of Hulless Oats. It comes from South Dakota. It was obtained by crossing different varieties in order to get into one Oat the most desirable characteristics of other hulless oats. The Hulless Oat, you know, is all meat and it is higher in feeding value than other oats for that reason.

The James Hulless is a medium early, stiff strawed hulless oat. It has about the same maturity as the Clinton. It has resistance to lodging, leaf-rust, stem rust and is highly resistant to blight. It may be susceptible to a few races of rust like Clinton, but is the most disease resistant hulless oat.

Over a four year test in South Dakota, it showed an average test weight of 45 lbs. per bushel. In comparing yield, allowances have to be made for hulls. When adjustment was made for hulls, the yield of James over this four year period at Brookings, South Dakota, was 82 bushel per acre, compared to 75.4 for Clinton. At Highmore, it was 74.8 for James and 64.4 for Clinton. You will occasionally find a hulled oat in with these hulless oats. The heavy yields that are obtained from this variety more than compensate for this. It is one of the very finest of hulless oats that has ever been developed. Figure on sowing around 50 lbs. per acre. The seed is Certified and comes in 100 lb. bags. Tagged and sealed. Orders for amounts other than 100 lbs. will be shipped in bags without certified tags. See Item 179 on price list.

CHEROKEE ★ ANDREW

The High Quality Early Oat Has Resistance to Race 45 Crown Rust

This variety has exceptionally fine grain quality. It produces one of the nicest, plumpest grains of oats that you can buy. This is especially noteworthy for such an early variety. It will mature four to five days to as much as a week earlier than Clinton. The grain is an ivory color with sometimes a pinkish tinge. Because of its earliness it is a great favorite in sections of the south where they want an early maturing oat.

Because of its earliness is perhaps one reason why it shows resistance to the crown rust 45 which comes on a little late. To have an oat that matures before hot weather is in many seasons vitally important. It is our suggestion to our customers that they plant two varieties of oats because the variation in conditions may make a variation in your crop. We will guarantee you as fine a quality of Cherokee oats as you have ever seen. See Item 171 on our price list.

A yellow seeded oat with a fine yield record

This oat was developed by the Minnesota station. Has been grown over a wide area. Illinois, Iowa, Dakotas have all found it to be a very good oat. It is a good yielder. It has a stiff straw. It is slightly taller than the Clinton, and approximately the same maturity. This variety has some tolerance to race 45 crown rust and is resistant to race 7, but susceptible to race 8 of stem rust. This variety heads out quite early but the grain ripens somewhat more slowly than some other varieties.

This is especially a good selection on soil that is normal or below normal fertility because it puts out a taller straw. The grains are plump and yellow. They have a good weight per bushel and a low percentage of hulls. You will find it to be an excellent feeding oat as the blood lines of both the Bond and the Rainbow are excellent. The quality of our seed is tops. See Item 173 on our price list for quotations.

EARLY MATURING—BONDA—DISEASE RESISTANT

We have a big call for Bonda Oats. This is a variety that was developed by the Minnesota station. It is a cross between Bond and Anthony. It grows a taller straw than the Clinton, which is desirable under certain soil conditions. It is still a stiff strawed variety and the grain has a very heavy test weight. It grows somewhat taller than the Clinton. The kernels are white. In Indiana tests it showed about the same maturity as the Clintons and less lodging.

The straw height is about four inches taller, and it is just slightly under it in yield. It is a very acceptable and satisfactory variety. Unquestionably its performance in many areas is the reason why we have the demand for it. We, of course, give this seed the same heavy grading that all of our oats get and the same Gro-Coat treatment. For some extra fine quality Bonda oats, let us have your order. See Item No. 166 on price list.

Twenty Years of Satisfactory Dealings

Eaton, Ohio

Dear Sirs:

I have bought Berry Seeds for almost 20 years and have been more than satisfied. You have fine values and they are always at reasonable prices.

Sincerely yours,

Myron S. Burch.

Finds Seed Exactly as Advertised

Fulton, Ill.

Dear Sirs:

I have used your seed for a number of years and have always found it very satisfactory. We have always been able to depend on the seed being exactly as you have advertised it.

Very truly yours,

Robert W. Lockhart.

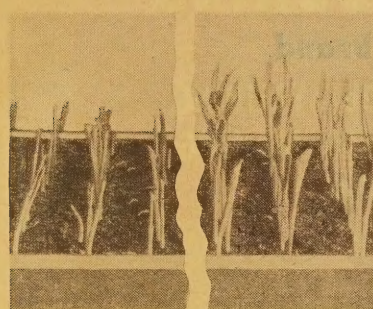

EVERY KERNEL OF BERRY CORN IS~

The Best Blood Lines

GRO-COATED[®] BRAND SEED CORN

Carefully Protected

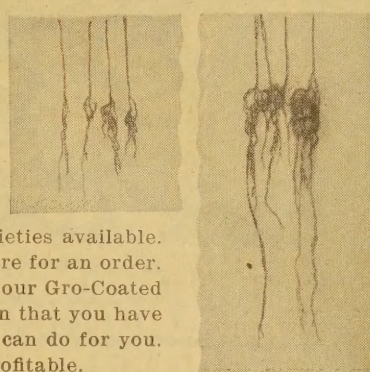

The real secret of our corn is the blood lines or the germ plasma that is used. It is by getting the right combination of the best blood lines that the maximum results can be obtained. Upon this depends the strength of the stalk, the depth of the root, the size of the ear, the depth of the grains, the feeding value, resistance to disease and to insects including corn borers. We strive in our work to obtain for our customers the very best combination. You read about many varieties of corn and there are many varieties available. We cannot sit down and talk with you and put on the pressure for an order. We do ask that for your own benefit that you plant some of our Gro-Coated Brand Hybrids in the different numbers next to the best corn that you have found so far. Let them prove on your own farm what they can do for you. We are certain you will find them highly satisfactory and profitable.

This shows the difference between the same variety of corn planted in the same soil on the same day in the same plot. The Gro-Coated Brand side came up quicker and grew faster.

Protected Against Unfavorable Weather

There is no way of telling when you plant your corn as to what kind of weather you may get after planting. It may turn wet and cold. Under such conditions disease organisms that tend to rot the seed become active. Seed Corn may have perfect germination and yet fail to come if these disease organisms destroy it. Berry's Gro-Coat protection gives you the very best of assurance that your seed is protected against these organisms, therefore it will stand much more unfavorable weather. In this way these high quality blood lines that you plant have the best possible assurance of making strong, vigorous, healthy, rapid-growing plants. It is the same protection that is given to all of our grass and clover seeds and the results have been sensational.

Farmers Report Quicker Germination, Faster Growth

Berry's Gro-Coat protection is more than a chemical coating. We incorporate into this treatment a root growth stimulator. This is designed to make a larger root growth, which in turn assures a more vigorous plant. A plant that gets off to a fast start is generally the most profitable plant, the same as a young pig or any other animal. Note the picture above. That was taken from two stalks of corn of the same size and variety. They were planted in the same soil, under identical conditions at the same time. Note that the larger roots coming from the Gro-Coated Brand plant were over twice as long and over three times as heavy. It had brace roots well formed and the secondary root system was well developed while on the other there were no brace roots and only the primary roots were there, the secondary roots just barely started. This has been another evidence of the care taken by Berry's in the preparation of seed corn to give you better results in your fields.

CORN

FOR Top Yields

ON Different SOILS

All Our Corn Is "GRO-COATED"

BERRY'S 800

A Top Quality Hybrid

One of the best in 120 day class

This great hybrid can be grown wherever U. S. 13 is adapted. It is a little earlier than that well known variety which makes it adapted to even a little wider area. It also holds its ears better, and that is becoming a more important factor in mechanical picking and corn borer damage. It gives you those "extra" quality features that are essential to a top grade hybrid.

This corn has a very high shelling percentage. It is a very fine feeding corn, too. It is one of those varieties that is always surprising in the way of the pounds of shelled corn. That's what counts most. For a good rugged corn that will go into your fields and do a job year in and year out, you will find Berry's 800 a splendid selection.

Gro-Coated Brand—Flat \$10.25 bu., Round \$7.75. 15c a bu. higher in Illinois or Ohio.

US 13

One of the older hybrids and a splendid one. It is a deep grain, has a fine feeding value, and easy to pick. There are many growers who produce U.S. 13 corn, but the yielding ability of the seed from these different growers can vary widely. We offer you U.S. 13 at its best. Yields are often increased 15 bu. per acre.

Gro-Coated Brand—Flat \$9.00 bu., Round \$6.50.

The Hybrid grown with Extra Inbreds

BERRY'S 813

Has recorded yields of 159.1 bu. per acre

Sensational yields have been obtained with this variety without fertilizer or extra heavy planting. This means it has to produce plenty of big heavy ears that are well filled. In producing this corn we use the regular 800 formula, described in the opposite column and add a certain percentage of another variety in the male line when we are producing the seed. This contains a later pollinator so that we are lengthening the pollinating period. This is an extra insurance feature that is a vital factor in years when hot weather burns pollen in the regular line. Customers tell us this 813 seems to have extra hybrid vigor. It is a single ear, deep grained, strong stalked hybrid. It has shown excellent resistance to chinch bugs and also a tolerance to corn borer. It is a 120 day type. We urge you to try it in connection with your other hybrids. It is something quite different because of this extra line.

Gro-Coated Brand—Flat \$10.25 bu., Round \$7.75. 15c a bu. higher in Illinois or Ohio.

You've Never Grown a Hybrid Like...

Berry's NEW "25" SERIES

Gro-Coated Brand

**COMBINING ALL THE OUTSTANDING
FEATURES THAT GO INTO MAKING
A FINE HYBRID**

The miracle of progress towards better hybrids never stops in the Berry organization. There is a constant search for improvement. The old time tested varieties are compared with the new. The old can be improved by making slight changes. New ones with different blood lines are thoroughly tested. They must show improvement under a variety of conditions to be accepted and incorporated into our line of hybrids.

THE 25 SERIES ARE AN ADVANCEMENT

It's been four years ago when we first produced these in a limited way. They have proven themselves to be distinctly superior. We have tried many others and could offer you many more varieties but none to equal these. We urge you to grow some of these, side by side, with the best you have found so far. We are confident you will find superiority in these truly great Hybrids.

"825"

A 115 to 120 Day Variety This corn produces a heavy crop on a strong, sturdy stalk. That's what most farmers want. The ear has a strong shank so that hangs on well. It will stand a lot of corn borer damage and resists ear droppage when the corn is mature. On the other hand, it is not difficult to pick so that you lose a lot of corn in the field through shelling. Many customers have told us that Berry's 825 corn has created an enormous interest on the part of their neighbors. That really means

something these days when there are many good hybrids. While it responds well to good soil fertility, it will do well even on lighter soils. We consider it is adapted to a wider range of soils and climate than most other hybrids in this maturity class. If you want a 115 to 120 day corn we urge you not to overlook this one because we believe it is tops in every respect. Use it for greater profit to you.

Gro-Coated Brand—Flat \$10.75 bu., Round \$7.50.

"625"

A 110 Day Variety This corn is five days earlier than the 825 but it is still a top yielding hybrid corn, even in the 120 day area. This variety can be grown from southern to north central Iowa across the nation, wherever similar conditions prevail. To the south of us like Missouri and other states farmers who want corn for early maturity or later planting will like 625. This variety has been giving good results all the years we have had it and this year it has been really sensational. Berry's 625 has stood up under wind conditions that have practically levelled neighboring fields. It

held its ears when there was a lot of droppage in the other varieties. It will stand a lot of dry weather. The grains have a good depth, the shelling percentage is high. In its maturity class we consider it the very best. Try some of it.

Gro-Coated Brand—Flat Grade \$12.00 bu., Round Grade—\$8.50

"425"

A 90 to 95 Day Type This is our earliest variety of corn. It is adapted to northern Iowa, southern Minnesota, Wisconsin, eastern South Dakota and northern Illinois, and areas having similar conditions. It makes a wonderful main crop variety in this area. Further south it has been highly popular where early feeding corn is wanted or when conditions required late planting. The plants are strong and sturdy. It has a broad leaf and makes a vigorous growth. In dry seasons it has

always produced more than anticipated. It has been excellent every year we have grown it. The strong ear shank prevents ear droppage. This is helpful when you have high winds or very dry corn. Enthusiastic reports come in even from southern states like Missouri, Kansas and Oklahoma. Be sure to try some of it if you need a corn of this maturity type. It is truly a great Hybrid.

Gro-Coated Brand—Flat Grade \$11.25 bu., Round \$8.00.

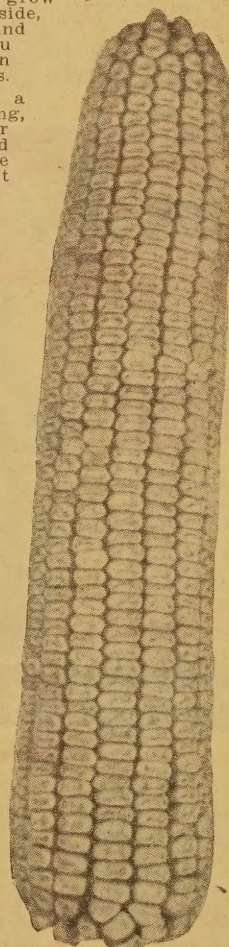

"935W"

SENSATIONAL WHITE CORN

We have not offered a White hybrid before because we had not found one that was satisfactory as to quality. In our 935W, however, we have a hybrid of excellent quality. It has big ears, deep grains, long stalks and has been a tremendous yielder. Kernels are wide, the grain is fine textured. It is excellent for milling purposes. It should be considered about a 125 day variety. We suggest it for Kansas, Missouri and other sections having similar climatic conditions. If you have been looking for a really top grade White hybrid, be sure to order our 935W.

Flat Grade \$12.00 bu.
Round Grade \$8.50 bu.

**"Gro-Coated"
Brand Seed
Gives Greater
Insurance of
Better Yields**

Dear Sir:

We have been using Berry's Seed on our farm exclusively and find no other seed like it. Your 813 is doing exceptionally well in spite of bad weather. Sincerely, Mitchell A. Dupoux.

Westville, Ill.

Gentlemen:

I find your seed exactly as represented and at a savings which means a lot at seed buying time. Your No. 813 Hybrid Corn was the best I ever raised.

Tulsa, Okla.

Yours very truly, Winston E. Fellers.

BERRY'S SEED CORN GIVES BEST ASSURANCE OF EXTRA PROFITS

BERRY'S 405

A Beautiful Big Yields
For Richer Soils
95-105

A heavy producing, early maturing hybrid, 95 to 105 day type. This comes next to our 425 for early maturity. It is a very remarkable variety; in that it has given such wonderful results over such a wide area all the way from Northern Iowa down into Oklahoma. We have had splendid reports on this Corn. For Northern Iowa it is a main crop, for the South, of course, for late planting or for early feeding Corn.

405 makes a nice leafy growth, has kernels of good depth and ear size very satisfactory for a Corn of this maturity. Its big feature is its big yield, that's where the extra profit bushels come in. It grows vigorously in the spring, and that's a big advantage. This 405 has outyielded later maturing varieties by quite a big margin. It does well on a wide range of soil. We consider this second to none in its maturity class. Of course, it is Gro-Coated Brand, which gives you extra protection when you have unfavorable weather after the Corn is planted. If this is the maturity range that you want, be sure and try the 405. We would like to see you grow some of this corn. In comparison with any other Hybrid of similar maturity its performance in the field will prove its value.

Flat Grade
\$11.50 Bu.

Round
\$9.00

4 IN 1

If you buy nothing else from us we believe you will find it highly to your interest to order one of these (4 in 1) seed corn specials.

We sincerely believe the varieties of Gro-Coated Hybrid sold in this catalog will make extra profits for most farms. Here at the cost of one bushel you can grow four different varieties. Each variety is in a bag by itself and then all placed in one bag. Thus you can prove for yourself which would be the best for your main crop the next year.

Friends We Have Something Better
Try These

3 COLLECTIONS

1. Hybrid offer A— $\frac{1}{4}$ bu., each of 615B, 405, 425, 625. These range from early to mid-season maturity.

2. Hybrid offer B— $\frac{1}{4}$ bu., each of 625, 825, 813, 800. This is mid-season to full season maturity.

3. Hybrid offer C— $\frac{1}{4}$ bu., each of 425, 625, 615B and 825. This ranges from the very earliest to the latest. An excellent selection to test for early and late planting and maturity.

Sold in bushel units only—4 in 1; 1 bu., \$11.50.

Be Sure to Specify Collection No.

BERRY'S 615-B

A Big 105 to 110 Day Corn
Adapted to Thin and Rich Soils

This is a splendid, heavy yielding Hybrid for one so early in maturity. It is earlier than 625 and just a little later than 405. It is more widely adapted than any other variety in this class. Early maturity adapts it to a wide range of climates. Farmers in northern and north central Iowa, and from Nebraska on east to Illinois, Indiana, Ohio, Pennsylvania, West Virginia, etc., will find this an excellent main crop variety. Farmers to the south of this area consider it one of the finest corns they can plant to get some early feeding corn, or where necessity compels late planting. Also in some areas its early maturity helps it escape hot, dry weather. We had one field near Clarinda that made dry corn of a yield of 110 bushel to the acre. It is somewhat similar to 939 but it makes a larger, better formed ear, holds its ears better and has superior husking qualities, as well as stronger stalks. For an all around purpose corn you will find this hard to equal. The 625 is superior in some respects, but also is just a little later. The ability of our 615 to grow under so many different conditions of soils and climate make it a dependable variety on which most any farmer can thoroughly rely.

Flat Grade

Round
\$8.25

A HYBRID PLANTING THAT OFTEN OUTYIELDS EVERY OTHER BERRY'S HYBRID BLENDS

The Reason for Making Blends

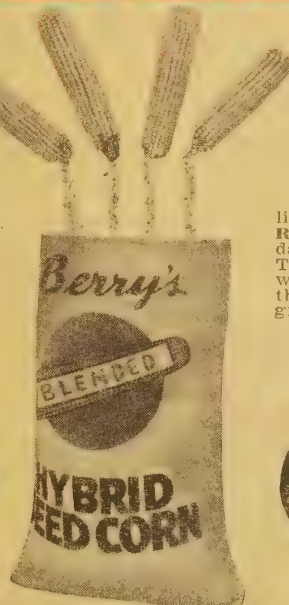

Most Hybrid corn varieties have a shorter pollinating period than the old open pollinated corn. The old open pollinated corn was a mixture of many varieties. In making Hybrid Corn, inbreeding eliminated these varieties so that the inbred was a single pure line of corn. In making a Hybrid, four of these inbreds are combined. However, the pollinating period of such a Hybrid is shorter. In event that hot weather hits when it is pollinating, a lot of the pollen will be killed which will result in poorly filled ears. The silk on the ears will remain receptive to pollen for quite a long period of time. Therefore, by prolonging the pollinating period we get greater assurance of well filled ears. Even though hot weather should kill the pollen off of one strain there is always the other one to still come along with pollen a few days later to fertilize the ears. Thus by using two or three varieties of Hybrids that mature about the same time, and yet have slightly different pollinating dates, we prolong the pollinating period.

Low Seed Cost—Big Yields

Berry's Hi-Yield Blends are made from the varieties that are listed in this catalog. We make our prices low as an added inducement to get you started in trying these Blends. The cost is less than half that many companies are asking for seed corn and we have priced it drastically below our regular prices. We believe

Round
Kernels

in Large Round

Thick
Flat
\$5.75 BU.

Comes in One
Size Only

Small
Flat
\$6.25 BU.

Four Grades of Blends—3 Maturity Ranges Regular Flat, \$7.50 bu.

This grade is the very best in size of grain. It has a little wider range of maturity than the other 3 grades. Regular Flat comes only in one maturity range 105 to 120 day. This gives a maximum length of pollinating period. This lot may contain an occasional off color kernel but will plant with a high degree of accuracy. You can buy this at a very deep cut price and a trial of it will prove its great value. Price Regular Flat, \$7.50 Bu.

Other Grades of Blends

We have three other grades of blends. Round which is fine accurately graded seed.

Thick Flat is made up of kernels too long for round and too thick for regular flat. Produces strong plants.

Small Flat graded as carefully as Regular Flat but consists of shorter kernels. This plants more acres per bushel.

The three grades mentioned above come in two maturity ranges. Medium is 100 to 110 days; Late 110 to 120 days. Please specify which kind of kernel grade you want and whether you want Medium or Late maturity. See price blocks for quotations.

High Quality Good Germinating Seed

Dear Sir:

I have bought Berry's Seeds for several years, and find them to be of high quality and good germination. They have been very satisfactory.

Sincerely, Alfred Erbe.

Altoona, Kan.

Splendid Yields—Well Satisfied

Dear Sir:

I am writing just a few lines to let you know how satisfied I was with your seed. I had a splendid yield this year.

Yours truly, Vernon S. Eley.

Harrod, Ohio.

SPRING GRAINS that are Popular **MONEY MAKERS**

SPELTZ

A Great Drought Resister

PRACTICALLY RUST AND SMUT PROOF

This picture shows what this remarkable grain looks like. It is really a type of wheat. It is very nutritious. The shucks cling to the two grains each carries. Grain is a little softer than most wheat. Makes wonderful ground feed. It yields well and is a very profitable crop under dry conditions. The grain is highly resistant against most races of rust and practically immune to smut.

Speltz is one of the oldest grains known to mankind. Apparently it was grown in prehistoric times. German-Russian immigrants introduced it into the United States. The Speltz we have is for spring seeding. It is grown from Canada to Texas. Iowa, Minnesota, Wisconsin, Michigan and states to the east are growing it as well as Western states where drought conditions are most apt to prevail.

Speltz is valuable as a nurse crop as it has very strong straw. It matures early. Sow $2\frac{1}{2}$ bu. per acre as early in the spring as possible. Cut before dead ripe. Thresh about like Oats. See Item No. 202 on our Pink Price List.

"GRO-COATED" FARM SEEDS PRODUCE BETTER CROPS

Spring BARLEY

KINDRED or L BARLEY

This variety of Barley is apparently about the best of the malting type Barleys. It is adapted over a wide area and receives a very fine endorsement from many sources. The Mid-West Barley Improvement Association has especially requested us to cooperate in selling this Kindred Barley. It is the No. 1 choice of the majority of maltsters and brewers. Illinois, Iowa, Minnesota, Wisconsin, North and South Dakota all recommend it. Kindred is a mid-season maturity. It has rough awns. It has very good resistance to stem rust. The variety seems to have given very satisfactory results under quite a variety of conditions. It brings, as a rule, the very best prices of all malting Barley on the market. The straw is not as strong as in some other varieties but that seems to be its only weakness and this is far overmatched by its other fine characteristics. It is a variety that receives most general recommendation from the greatest number of people. Therefore, to all of our customers wanting a good malting Barley, we would consider this a splendid selection. We have some very nice quality seed for you. See Item 191 on our price list.

MOORE

This is a high-yielding, stiff-strawed and disease-resistant variety of Barley. It is of hybrid origin. It is a wide, six-rowed, smooth-awned spring Barley. It has relatively thin hulls. The awns are rough at the top but break off very easy during thrashing or combining. The straw of Moore is thicker and stands up better than the average variety. The five-year test at Madison, Wisconsin, shows that it has outyielded the Wisconsin barless by 6%, Oderbrucker by 12% and other tests show it is 39% over Oderbrucker, 28% over Kindred. It yielded 57.2 bushels in Wisconsin test.

This Barley is no longer recommended for malting purposes but it still is a good feeding barley to grow in many areas. Under certain conditions the grain of this variety is a dull gray color and brewers and maltsters do not like this so well, therefore it may not bring the best price for a malting variety but it still is a good feed grain because it has a stiff straw, potentially a very high yielder under favorable conditions. Has resistance to stem rust, spot blotch, root rot and mildew. See Item 192 on price list for quotations.

MONTCALM

This is also one of the newer Barleys. It is a six-row, smooth-awned, spring Barley. The straw grows erect, it is fairly tall, the grain is of medium maturity. It ripens about two days ahead of the Wisconsin 38 and has about the same length straw. It has greater resistance to disease than most of the older varieties. It is this disease resistance in these new varieties that apparently is responsible for the increase in yields that are obtained. Montcalm is an accepted malting variety of Barley. This Barley seems adapted over a wide area, even in Central and Southern Iowa it outyielded many other top varieties. It also showed a two-pound heavier test weight per bushel. That in itself indicated the great value placed upon it by farmers who saw it growing. It is just as fine today. In these days of lower prices, increased production per acre is the only way to get more profits. It takes better seed to help you get these greater yields. Our heavy cleaned Montcalm Barley will help you get that job done. You will find such seed a wise and sound investment at our present low prices. SEE ITEM 190 ON LIST FOR QUOTATIONS.

For Best Results, Plant Only "GRO-COATED" Brand Seed

Good Seeds and Nursery Stock
Canon City, Colo.

Gentlemen:

I wish to state that Berry's Seeds are very good, not to mention your prompt shipping service. Also, your nursery stock is the best I ever used.

Very truly yours, Frank Dilley.

Two Generations Endorse Berry Seeds

Dear Sir:

Amoret, Mo.

I have planted Berry's Seeds for several years, and I have always been very pleased with the results. My father used your seeds when he was farming, and I know from experience that they are good.

Your customer, Walter K. Ewbank.

LEE

The SPRING WHEAT

WE RECOMMEND ABOVE ALL OTHERS
FOR YIELD AND QUALITY

A Variety in Big Demand First Time at Reasonable Prices Finest Quality Northern Seed

We are always looking, checking, testing new varieties of Grains as well as grasses and legumes. This research is being done for you. Berry customers have learned to depend on this book for guidance in their farming operations. For many years Mida has been our choice of all spring wheat varieties. It is still a good one. You can still get it from us. See description below. You will find it to outrank most other spring wheat varieties.

The reports we have on Lee Wheat, however, are such as to rank it materially better even than Mida and far ahead of all others.

The Iowa station reports Lee as being most resistant of spring varieties to leaf rust and states it is a high yielding variety that stands up well. The big demand there has been for Lee Wheat which proves that the variety is selling itself. Farmers have seen and heard about it and want it. It should please you too. That always happens when it proves itself superior. It is during this period of early development that growers can often sell their crops at premium prices for seed purposes.

A Top Quality Variety and Big Yields

Lee is a high quality Wheat. It has excellent milling qualities. It has consistently, in several comparative tests, outyielded Mida by 3 to 5 bushels per acre.

Lee is a medium, early maturing bearded variety which in some years is another decided advantage. It classifies as a hard red spring wheat. We have contracted for a good supply of seed. Thus we can assure you of getting the genuine article and in the best quality. Heavy weight, thoroughly clean high germination.

We are sometimes asked where spring wheat can be grown. That will vary according to season and how early you can get it in the ground. We have grown good yields of spring wheat in southern Iowa in years when it did not get too hot too early. Normally this is a little too far south for spring wheat, but from Central Iowa on north it should do O.K., especially if Northern grown seed is used and early seedings are made.

Our seed is Northern grown and will be shipped direct from Fargo No. Dakota or similar point. See Item No. 198 on Price List for quotations.

BUCKWHEAT

You can often turn acres that might be wasted into big profit makers with Buckwheat. Land that has been flooded can often give you a good return. Acres not otherwise used can be sown to it. It is a quick-growing grain crop. Matures in 10 to 12 weeks. Excellent catch crop. Sometimes sown after small grain so as to get two crops from the land. Good cover crop for orchards. Makes land mellow. Good for bee pasture.

One of the best crops for very poor soils. Responds to increased fertility. Does not like lime and should not be sown on very wet land. Can be grown most anywhere north of the cotton belt. Prefers cool weather, especially at blooming time, but is sensitive to frost. Prepare a good seed bed. Sow 3 to 4 pecks per acre. Yields up to 50 bu. per acre depending on conditions. See Item No. 203 on Price List. Postpaid 1 lb., 35c; 5 lbs., \$1.00.

RYE FOR EXTRA EARLY SPRING PASTURE

We are often asked, "What can we sow for real early hay or pasture?" We know of nothing better than Winter Rye. You can sow Winter Rye in the spring and get a lot of very fine pasture from it and it can be used for hay too. Winter Rye should not be sown in the spring for grain production but for a quick, fast growing, nutritious green growth. You will find it hard to beat Winter Rye. We use the Balbo type Rye, which can be safely pastured without tainting the flavor of milk of dairy cattle. See Item No. 200 on Price List.

Blue Ribbon from Berry's Seeds

Dear Sirs: Clear Lake, Wisc.
I got a blue ribbon at our fair on the Clinton Oats I got from you. They sure are swell and the best Oats I ever raised.

Yours truly,
Ole P. Korsbon.

MIDA

Next to Lee we believe this to be the best spring wheat for a wide area. It has outyielded well known varieties such as Pilot, Rival, Thatcher and Renown. It has a good stiff straw and is less subject to loss through shattering than most varieties. Mida has more resistance to most races of rust than these other kinds and has high resistance to leaf and stem rust and to stinking smut. The heads are bearded. Kernels are large, dark red and the grain has a heavy test weight. It has very satisfactory milling and baking qualities.

Any variety that has crowded out good kinds like Thatcher, proven superior to the Marquis and outyielded New Thatch is a top notcher. We do believe the Lee is a better Wheat and that it will make more profits for you. It is true Lee Wheat is still scarce and relatively high priced. If you wish to save on seeding costs and still get an excellent variety you will make no mistake in ordering our heavy re-cleaned northern grown Mida Spring Wheat.

See Item 199 on Pink Price List.

FIELD PEAS

This Crop should not be confused with Cowpeas. They are a warm weather crop and planted mostly in southern states. Our Field Peas are true peas. They are sometimes referred to as Canada Field Peas. They can and should be sown as early in the spring as possible. They like a cool growing season. If you need an early hay crop that is high in protein, sow a bushel of these peas with 2 bu. of Oats per acre. Peas are vine-like. The oats help hold them erect. Cut the crop for hay when Oats are in the dough stage. The production is heavy. The feed is fattening. Also good to cut and feed green. It is also a good crop to plow under for green manure. Inoculate your seed. See Item 189 on Price List. Seed supplies limited.

Always Boosts for Berry Seeds

Dear Sir: Moorehead, Ia.
For the past 25 years I have purchased all my field seed from you. I have always been perfectly satisfied. Your seeds are all anyone could ask for. That means perfect quality. I'll always boost for Berry's Seeds, both field and garden.
A satisfied customer, Lewis W. Shepard.

SWEET SUDAN GRASS

DELICIOUS, NUTRITIOUS AND ENORMOUSLY PRODUCTIVE

Gro-Coated Brand Helps Insure Best Results

Since Sweet Sudan Grass has come on the market it has gained very rapidly in public favor. In making Sweet Sudan the Common or Regular was crossed with Leoti which is a heavy yielding sweet, juicy sorghum. This crop had high resistance against disease and also shattering of seed. Sudan was finer stemmed and stools more freely. It makes wonderful hay but is not sweet. In making the cross the best of these two crops was put into one. It grows very much like ordinary Sudan. It stools even more freely and grows taller. The leaves are a little broader. It is a sensational yielder, and in reports that we have it has outyielded the Regular or Common Sudan by 30%.

**GRO-COATED
Brand Seed
costs no more
but may save
you hundreds of
dollars**

Item No. 231

A Very Palatable Fast Growing Crop for Pasture and Hay

You Plant this after the seed bed is warm as described below under How to Handle Sudan Grass. You can get two or three cuttings of hay in a year. It remains palatable over a long time and you do not have to cut it at any certain stage. Even if you let it stand for seed it makes good feed. It has a delicious flavor and because of its sweeter content, a higher feeding value. Notice the photograph at immediate left. The cow eats the Sweet Sudan down to the ground while it nibbles the tops of the Regular. Sweet Sudan is a little later in maturity than Regular Sudan. It maintains its high feeding value in pasture up until frost. It is a great heat and drouth resister. It gives you sweet, palatable juicy food when many grasses are becoming dormant because of heat. Pasture it after it gets around 10" high.

Seed Supplies Short—Demand Heavy

There will be a big need for Sudan Grass in areas that have been hit by drought. Big, heavy hay and pasture will be needed quick. We predict a tremendous demand for Sudan Grass seed. This will come in face of a short seed crop. Prices will probably advance sharply by seeding time. Order your seed early this year.

Small lots postpaid: 1 lb. 50c; 5 lbs. \$1.75; 10 lbs. \$3.00. See item 231 on price list.

Best Crop I ever Raised

I have the best crop I ever raised of Alfalfa. Clipped the crop after oat harvest. The 1st of September, it was knee high again. Used 3 pounds less seed per acre. I will insist on Gro-Coated seed.

A. Nevenschwander, Grabill, Ind.

Likes Gro-Coated Seed

I will want Gro-Coated Brand seeds in the future. They gave better stands and more vigorously growing plants. I will gladly pay the extra cost to get my Gro-Coated Brand.

J. S. Jarboe, Pratt, Iowa

100% Better Stand

I sowed Gro-Coated seed last year. It was the best seeding I had in my life. It is twice as thick as it needed to be, and was 2 feet high when I cut the wheat. It made 100% better stand. I wouldn't sow any more seed unless it was Gro-Coated Brand.

L. McWilliam, Deerfield, Minn.

REGULAR SUDAN FOR QUICK DROUGHT RESISTANT GRASS

A Fast Growing Crop That Is Widely Adapted

Sudan grass belongs to the Cane family, but it is finer stemmed and a free stooler. It grows from 4 to 7 feet high. It will yield 4 to 7 tons of cured hay per acre. It has good feeding value. Livestock is very fond of Sudan. The first hay crop can be cut about 60 days after seeding. Second and third crop 30 to 40 days apart. You can sow it around corn planting time or just a little after, which will indicate how quickly you could get a valuable feed crop. Sudan is one of the best drouth resisting grasses known. It stands a lot of heat. It supplies an abundance of fine pasture or hay during the dry months of summer when feed is often scarce. Since it yields so heavily you do not have to devote many acres to get a lot of feed from Sudan grass. It provides feed insurance, that is why every farm should have some of either the regular or Sweet Sudan.

Buy Your Seed Early This Year

You will get the best values early. Seed supplies are short. Because of the need for feed in drought areas, large acreages will be sown to this fast growing crop. The price shown on price list sent with catalog will be protected as long as possible. To Save Most, Buy Now. We guarantee you a saving on the Sudan Grass seed that you may purchase from us. The true basis of value is the quality that you receive. We know that you will be delighted with the character of stock that we have for you. Sudan Grass is quite easily hurt by cold weather after seeding. Our Gro-Coated Brand seed gives you much greater assurance of satisfactory stands.

2 and 3**

How to Handle Sudan Grass

Do not sow until corn planting time or after. Prepare a good seed bed like that for Corn. Drill in close rows or broadcast. Cover the seed about an inch deep. Sow 20 to 25 lbs. per acre. Begin pasturing it when it is about 10 inches high. It can be pastured until frost. Many consider it best not to pasture Sudan after frost as there is some danger of prussic acid developing in young dark green growth that may start after periods of extreme drought or after frost. Generally cut for hay when in bloom, but can be cut earlier or later. See item 230 on price list.

Price in small lots Postpaid: 1 lb. 50c; 5 lbs., \$1.75; 10 lbs., \$3.00.

Fine Seed—Money Saving Prices

Gentlemen: Annada, Mo.
I have been using your fine quality seed for a number of years and have found it O.K. at a money saving price.
Yours truly,
Frank Busch

Berry's Seeds Give Best Results

Dear Sir: Goodwins Ferry, Va.
I find that I get better results from Berry's seeds than with any of the other companies I've done business with. They are everything they are recommended to be and more. Very good quality at a reasonable price.
Sincerely, Eugene Doss

SOY BEANS

MONEY MAKING VARIETIES

HAWKEYE

This is a splendid variety as a main bean crop in areas like north central Iowa, northern Illinois, Indiana, Ohio, southern Michigan. It is also used in Nebraska and southeastern South Dakota. The stalks are strong. The pods are mostly three seeded. It has good length of straw which is lodging resistant. It is perhaps the most widely grown bean throughout Iowa. Farther south it is used for delayed planting where they want the crop off the land early so they could put it into wheat. Yields of over 40 bushels per acre have been recorded in official tests for this variety. We can recommend it to you very highly. See **Items 184 and 185** on our price list for quotations on this variety.

BLACKHAWK

This is our earliest soybean. It is a wonderful bean for areas like northern Iowa, southern Michigan, Minnesota and other similar climatic areas. It has outyielded other well known early varieties by a considerable percentage. It is a Mukden-Richland Cross. In some respects very similar to the Hawkeye but about a week earlier in maturity, two weeks earlier than the Lincoln and Adams. Michigan reports it bears its pods high above the ground for easy combining. Stands up well. High in yield. Seeds are quite large for an early variety. We especially recommend them as a main crop for northern Iowa and for delayed planting or early maturity farther south. They are a splendid bean for such an early one. See **Item Number 183** on our price list.

HAY BEANS

Hay soybeans are finer stemmed than the grain varieties that are described above. These grain varieties are sometimes used for hay. However, if you want it strictly for hay, buy the hay beans. Plant them at the rate of about a bushel and a half to the acre. We generally supply the Kingwa, a black bean, for hay purposes, although other varieties may be used. They will be good and the beans will be of the hay variety. See **Item 188** on the price list.

HAIRY VETCH

LIVES OVER ONE WINTER

This is also known as Winter Vetch because it is very hardy and will winter over in most any part of the U. S. The crop has as wide a range of use as Red Clover. Makes excellent hay. It furnishes pasture the first season when sown in the spring and makes a full hay crop the next year.

Winter Vetch is an excellent cover crop to use in orchards. It is a wonderful crop to plow under for green manure. The root system is very fibrous and it is a great nitrogen-gathering plant. You add a lot of humus as well as soil-building elements to the land. Winter or Hairy Vetch does especially well on sandy soils and is one of the most profitable crops to grow on such land. It can be grown successfully on any well-drained land. This Vetch is highly drought resistant and also quite resistant to Alkali. It will germinate well on soils too Alkaline for most legumes. You can sow in spring or fall. When fall sown, acts as a winter annual like wheat. Remains green late in the fall, starts early the next spring. Is often sown with winter grain to help support the crop which has somewhat weak stems for its heavy growth. Sow 20 lbs. per acre. Inoculate your seed. See **Item No. 68 on Price List**. Postpaid 1 lb., 45c; 5 lbs., \$1.75; 10 lbs., \$3.25. All Vetch Seed is Gro-Coated Brand.

Always Good Seeds for a Long Time

Dear Sirs: We have used Berry's Seeds for a long time and have always had good results. We are very satisfied.
Yours very truly,
Ernest Stanton.

Platteville, Wisc.

Ernest Stanton.

LINCOLN

This variety is about a week later than the Hawkeye and two weeks later than the Blackhawks. It is generally advisable to grow as late a variety as the season permits because generally a larger yield of beans is obtained. Lincoln is a very high yielding bean. It outyielded the Illini and Dunfield by 20 to 30%. Lincoln has a higher oil content and the quality of the oil is extra good. It and the Adams, described below, run about neck and neck in production. Lincoln has a good straw growth. We recommend this for areas having conditions like the southern two-thirds of Iowa and the northern half of Missouri. Lincoln holds its beans well for combining. Ohio, Indiana, Illinois, Missouri, Virginia, even Wisconsin and Michigan, give excellent reports on the Lincoln Beans. See **Items 181 and 182** on the price list.

ADAMS

This is a very popular variety with a high yield. Good tall straw, perhaps even more lodge resistant than the Lincoln and may mature a few days earlier. In comparison to Lincoln, several tests show it superior in yield and stands up better. It has more oil content and is higher in protein. The Lincoln is still a good soybean and doing a wonderful job, but the Adams shows that it has somewhat superior characteristics. This variety has been tested with the greatest of care and definitely proven itself as a high quality, top yielding soybean. The seed that we have for you in all of these varieties is thoroughly re-cleaned and every shipment guaranteed to satisfy. If you have never grown any of these Adams beans and you are in the area of its adaptation, we do urge you strongly to try some of them. See **Item 180** on the price list.

INOCULATE SOY BEANS

Be sure to inoculate soybeans for best possible yields. Prices for inoculation: 2 bu. size, 30c; 5 bu. size, 50c; 25 bu. size, \$2.25. Carton of six 5 bu. sizes \$2.95.

VETCH

SPRING VETCH

AN ANNUAL VARIETY

This Spring or common Vetch is not as hardy as Winter Vetch and should be sown only in the spring excepting in areas where temperatures zero. The seeds are much larger and the plant makes a coarser growth than Winter Vetch. Although it does not stand extreme cold it does prefer a cool-growing season. It can be grown as far south as regular field peas can be grown. This does not mean Cowpeas but the true peas. In fact, you can use this crop like Canada Field Peas. A good practice is to sow with oats and cut the two together for hay while the oats are still green.

Sow the crop early in the spring. It will stand pretty cool weather and some freezing, same as peas. Sow 40 to 50 lbs. per acre with a couple of bushel of oats. Vetch grows 3 to 5 feet high. Grows fast and yields are heavy. Makes excellent feed that is high in protein. The crop also may be used as a green manure crop and plowed under while in bloom. Then, you of course, get no crop but you will add a lot of humus and nitrogen to your soil. It is necessary that Vetch seed be inoculated. The cost is reasonable. See page 27 for information. Package of inoculation for 100 lbs. of Seed costs only 50c. See **Item No. 69 on Price List**. Postpaid 1 lb., 35c; 5 lbs., \$1.35; 10 lbs., \$2.25.

Marvelous Mixture—a Great Crop. (See Page 21)

Dear Sir: I bought 6 bu. of your "Marvelous Mixture" and the photo I have enclosed, will show a stand clear up to my armpits. It's a wonderful crop. Your seed has always been very satisfactory.

Yours very truly, A. E. Semsch.

A Heavy Producing Fast Growing Sweet Tasting Crop

ATLAS SORGO

Early Drouth Resistant; Very Palatable and Nutritious

This is one of the most sensational Forage Crops ever developed. It is an enormous producer. Yielded up to 18.7 tons per acre, under conditions where corn yielded only half as much. In dry seasons it has out produced corn in grain yields 3 to 1. Nebraska and other States report it the heaviest forage producer. From Nebraska, through Iowa and on East, down South to the Gulf it is a wonderful fodder crop. The juice of Atlas Sorgo is very sweet. That makes it highly palatable and it is a very nutritious feed. Cattle especially will leave most any kind of feed to get at Atlas Sorgo. They thrive on it. In extreme drouth years we have seen farmers bring their stock through the winter with nothing but Atlas Sorgo fed right out of the shock. It brought them through in excellent condition, fat and sleek in the spring, as though they had been fully corn fed. This crop also makes wonderful ensilage.

Highly Drouth Resistant

The average crop like corn for example, if it is severely injured by drouth it will stop growing. Atlas Sorgo on the other hand will start up again. In sections where drouth completely dried up corn, Atlas Sorgo remained green. The crop also seems highly resistant against grasshopper damage. Where one corn field was almost completely wiped out by grasshoppers, Atlas Sorgo was practically untouched. Grows 10 to 12 ft. tall. It has good strong stocks. It is very resistant against lodging. The seeds of Atlas Sorgo are white and very palatable. Plant 8-12 lbs. per acre at corn planting time or after. Rows 40 inches apart. Cut a little before frost. Shock to cure.

All of our Sorghums and Millet seeds are GRO-COATED BRAND. We find that these crops are greatly benefited by this process, especially in years when cold or wet weather follows planting. See Item 220 on Price List for quotations. Postpaid, 1 lb., 45c; 5 lbs., \$1.75; 10 lbs., \$3.00. Atlas Sorgo seed is in short supply this year. High germinating seed is very scarce. This is also in a measure true of Norkan and Millet. Prices are bound to advance toward spring. Be sure to order early.

NORKAN or Sometimes Referred to As Early Atlas

This crop very closely resembles Atlas Sorgo in the way it grows and in the type of grain it produces. It is, however, quite a bit earlier in maturity (about 10 days to 2 weeks earlier). That means, of course, it can be successfully grown much farther north than Atlas. In areas south of Central Iowa the Atlas would produce more tonnage as it makes a taller growth. However, areas having shorter seasons or for planting later in the season this Norkan is a good selection. While it will not make as tall a growth, the grain yields generally equals Atlas.

This crop is a cross of Atlas Sorgo with Early Sumac Cane. It is sweet stalked and very palatable as a fodder crop. Plant like Atlas. (See also NORGHUM on next page.)

We have some beautiful seed for you. See Item 221 on Price List. Small Lots, Postpaid, 1 lb., 40c; 5 lbs., \$1.50; 10 lbs., \$2.75.

Picture shows grain production of Atlas Sorgo. Makes wonderful feed stalks and all fed right from the shock.

MILLETS

Be sure to drop us a card if you mislay our Pink Price List.

German or Golden

This is that beautiful, heavy growing variety that makes such wonderful production. Its leafy growth may attain a height up to 4 and 5 ft. Yields as high as 4 tons per acre are reported and seed yields 25 to 40 bu. The feeding value of the hay is similar to that of other grass crops.

Millet seed should not be sown until after corn planting time. It wants warm soil and weather. Does not like cool weather. Since it is a fast growing crop it can be planted late. It will make a hay crop in around 50 to 65 days, depending on conditions. Sow 35 to 45 lbs. per acre for hay, or 20 to 25 for a seed crop. Makes best hay when cut just before blooming. Being shallow rooted, it does not do too well as a pasture. Can be cut for seed when seed can be rubbed out of heads by hand. If combined let it get thoroughly ripe.

We have some very fine seed for you. It's all Gro-Coated Brand. That gives you greater assurance of getting satisfactory stands. See Item No. 225 on price list. Postpaid, 1 lb. 40c; 5 lbs., \$1.40; 10 lbs., \$2.50.

Proso or Hog Millet

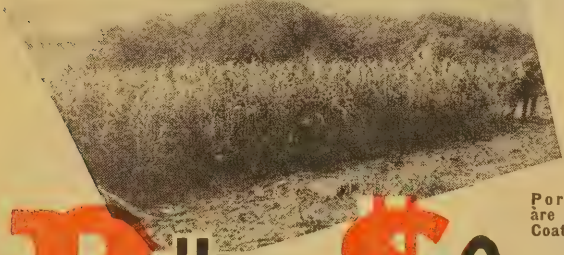

Also Known as Broom Corn Millet and Russian Wheat

This Millet is grown almost exclusively for seed. A very prolific producer. Seeds are larger than other millets. Makes fine feed. It is used in some countries for human food. Equal to Barley in feeding value. Makes extra fine poultry feed.

Proso is a heavy seed producer, yielding up to 60 to 70 bushel per acre. It matures in sixty to seventy days. Makes a good cash crop. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. per acre. Drill in close rows or broadcast. See Item No. 227 on Price List. Postpaid, 1 lb., 35c; 5 lbs., \$1.25; 10 lbs., \$2.00.

BERRY'S ANNUAL PORK PRODUCER

A rapid growing mixture of legumes, forage and grass crops. Can be used a few weeks after seeding. Very productive. High in protein. Builds big body frames, reduces grain consumption. Makes hogs of marketable size in quicker time. Contains Vetch, Rape, Rye, Barley, Oats, Wheat, etc. Sow 50 to 60 lbs. per acre early in spring. See Item No. 234 on Price List. This seed does not come Gro-Coated.

Showing the growth of Billion Dollar Grass

All forage crops on this page (except Pork Producer) are priced Gro-Coated.

Billion \$ Grass

This is a tall growing variety of Millet that has high yielding ability. With favorable moisture conditions it yields up to 26,000 to as high as 50,000 pounds of green feed per acre where produced. It also has the ability to produce a lot of seed. Seed yields of 1000 to as high as 2000 pounds per acre are reported. It does not stand heat and drouth as well as Sudan Grass or Atlas Sorgo. Yet we have had some wonderful productions even in dry years. This crop is especially grown in Iowa and states to the north and east, including the New England states. Farther south we would consider Sudan grass, Sorgo or Norkan better. Billion Dollar grass is a fast growing crop. It can make a hay crop in 6 to 8 weeks after seeding. Do not sow too early, generally around corn planting time or after, even into June or July. We recommend sowing 20 lbs. of seed per acre. It will grow up to 6 to 8 ft. high on soil of good fertility. It makes good feed for cattle and sheep. It is widely used for pasture. It does not become poisonous because of drouth or frost. By ordering early we can take care of your orders. For Price See No. 232 on Price List. Postpaid, 1 lb., 35c; 5 lbs., \$1.25; 10 lbs., \$2.00.

Berry's Seeds Best in Purity and Cost

Dear Sir: Mt. Horeb, Wis.
I have a 115 acre farm and have been farming for myself 30 years. During that time I have bought from many different seed companies but the biggest difficulties were purity and high cost. But, during the past few years I have bought all of my seed from Berry's. Your seed cannot be beat for purity and reasonable cost.
Yours, Orvin Barton.

Quality High—Prices Low

Dear Sirs:
I find your seed to be of the same high quality that you recommend. I get good yields. Also, the prices are low and I like your different grades of various seeds.
Sincerely yours, C. Jack Johnson.

Kyles Ford, Tenn.

OTHER MONEY MAKING CROPS FOR GRAIN, HAY AND PASTURE

CANE

MAKES TREMENDOUS YIELDS

This forage Cane is very rich in sugar and fat. It is a very palatable crop. Its yields are enormous as it produces 10 to 15 tons of excellent green feed on rich land. It also is a remarkable drought resistor. If you want it for hay make the seeding at a heavier rate of 75 to 100 pounds to the acre. For a fodder crop you can drill it in rows as far apart as corn rows, using around 10 pounds to the acre, or double up the rows and use 20. For hay the heavier your rate of seeding, the finer the growth. Our seed is all Gro-Coated Brand.

Early Amber type, the kind most generally grown, a great value because of its splendid growing power. **Item 216 on Price List.**

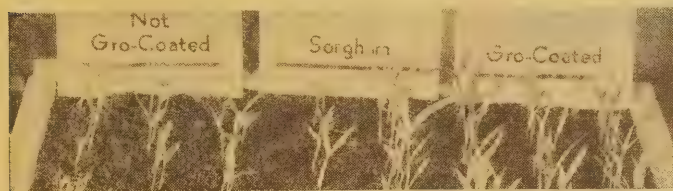

Early Orange type, heavier stalks, more abundant leaves, heads more compact. Heavier yielder but a little coarser. Cane seed is more plentiful this year. **See Item No. 215 on Price List.**

WACONIA CANE FOR SORGHUM PURPOSES

We use great care in getting our sorghum seed. We cannot guarantee the crop but we do consider it equal, if not superior to any on the market.

We have selected this variety for molasses purposes because it has given very satisfactory results. It produces a fine quality of sorghum, both in color and flavor, and has high yielding records. We try to keep the quality at a high degree of purity. We do not guarantee crop or assume any liability beyond the cost of the seed.

See Item 214 on Price List.
Postpaid, 1 lb., 45c; 5 lbs., \$1.75; 10 lbs., \$3.25.

"Showing the Superiority of Gro-Coated Seed Under Unfavorable Weather Conditions"

ENORMOUS YIELDING HIGH PROTEIN PASTURE

DWARF ESSEX RAPE

A Crop that Will Help You Reduce Pork Production Cost

This is a very rapid growing crop. It is one of the greatest of quick growing forage and pasture crops for the cornbelt. It can be pastured within 6 to 8 weeks after seeding. You can sow it any time from early spring until next summer. Rape is equal to Alfalfa in feeding value for hogs and sheep, and it also is good for calves, cattle and horses. With Rape pasture you can cut down the amount of grain that is required, and you will get your hogs ready for market quicker. In tests at the Iowa Experiment Station Rape pasture cut down more on grain consumption and tankage than when they were fed on Alfalfa and it carried more head per acre.

Rape, under favorable conditions, will yield 40 tons or 80,000 lbs. of green matter per acre. On a dry basis it analyzes high as 37% protein. It is also high in calcium and phosphorus. It is superior to Alfalfa and Clover as a corn balancer. Provides pasture from early spring until the ground freezes in the fall.

Rape is a crop that grows and makes a heavy leafy growth. The leaves look somewhat like cabbage leaves, but it does not form heads. One of the finest things about it is that it grows so fast. If you are looking for a quick pasture, especially for hogs and sheep, you will find it hard to excel Dwarf Essex Rape.

Be sure to grow some. Sow it alone in the spring or with Oats and pasture when the Oats are removed. Some sow about the same time they sow Oats, others broadcast when the Oats are up a bit, and let the rains cover it.

Only requires about 5 or 6 lbs. of the seed per acre. It grows on many soils. It does best on fertile, well drained loams. It is not so well adapted to sandy or stiff clay soil. Our seed is guaranteed genuine Dwarf Essex Rape. It's Gro-Coated Brand.

See Item 233 on Price List.
Postpaid, 1 lb., 40c; 5 lbs., \$1.50; 10 lbs., \$2.75.

Photo of
Dwarf
Essex Rape

Always Gets a Stand and Saves Money

Gentlemen: North Tazewell, Va.
I have been buying your seed for years and I always save money. Your seeds are just what you say they are and I have never failed to get a stand. I always speak a good word for Berry's.

Yours respectfully,
Joe N. Hunt.

HEGARI

This is a sweet sorghum, somewhat after the order of the Atlas Sorgho and the Norkan, described on the previous page. It does not grow as tall. The stalks are very sturdy. The crop is very nutritious, whether used as a fodder, for ensilage, grain or even as pasture. Hegari yielded up to 5000 pounds of grain per acre and up to 8 tons of ensilage. Livestock, especially cattle, are very fond of it because of its sweet taste. It combines the grain production of Kafir and Milo with the high forage value of Cane. It matures earlier than Atlas. The growth is at least three foot shorter. **Item 217 on Price List for Gro-Coated Brand.**

MIDLAND MILO

THE EARLY MATURING COMBINE TYPE RIFENS IN ABOUT 90-95 DAYS

This new low growing Milo has become the most popular of all the grain sorghums. It has been dwarfed insofar as stalk growth is concerned. For grain production, however, it has remained very high. You can harvest this grain with an ordinary grain combine. Therefore, if the crop has matured so that the seed is good and dry, you do not have to first cut it and shock it, you can combine it right out of the field. Feeding value runs quite close to that of corn. You will find this extremely drought resistant. It makes good feed for cattle and widely used for chicken feed. You get good insurance of a crop of grain by having some of this drought resistant grain on your farm. We ship best available on orders. **Item 222 on Price List. It's Gro-Coated Brand.**

NORGHUM

One of the Newest and Earliest Grain Sorghums

This is a combine variety that originated in South Dakota. You know it has to be early. After last year's experience, that is what many will be looking for. A crop that is more certain to mature even if it is necessary to plant late.

This is a new variety. It wasn't released until 1949. As reported to us, over 50 types of sorghums were crossed to develop this Norghum. It is a selection from crosses of Dwarf Freed Yellow Kafir and Dwarf Feterita. Under South Dakota and Nebraska conditions plants grew 36 to 46 inches high with an average of 40 inches. It has an open type seed head that sticks up high above the leaves. This head dries out well and is ideal for combining. Stalks seem sturdy and resistant to lodging.

Norghum is rapidly becoming very popular because of its heavy yield and high feeding value. In a 3 year test at 3 locations in South Dakota the average yield for Norghum was 47.7 bu. per acre; for Sooner Milo, 26.2. That's almost double. In feeding trials it took 513 pounds of Norghum to put a 100 pounds of gain on lambs as compared to 495 pounds of Corn. On hogs 357.5 lbs. of Norghum equaled 354.3 lbs. of Corn. So you see they are almost the same in feed value. Poultry raisers say chickens pick Norghum out of any other grain feed.

Drill 8 to 10 pounds per acre a little after Corn planting time in 36 to 40 in. rows. Our Seed is all Gro-Coated Brand. **See Item No. 219 on Price List.**

Sows More Acres Because of High Quality

Dear Sir: Freeport, Ill.
I have been sending to you for my seed for the past several years and have been well pleased. This last spring I sent in an order but when the seed came it looked so good that I decided to sow more. It has been very satisfactory.

Yours truly, Henry Kortemeier.

GRASSES

For Hay and Pasture

CRESTED WHEAT GRASS

See Item 140 on Price list

This is the most drought resistant of all grasses in common use. Has made satisfactory growth with as little as 10 to 18 inches of annual rainfall. Has yielded 3 tons of hay per acre and up to 900 pounds of seed in more humid sections. It is a long lived, deep rooted, fine stemmed grass. Starts growing unusually early in the spring. May start two weeks before Brome. Likes cool weather. It is extremely winter hardy. Becomes somewhat dormant during very hot weather. Starts up again with fall rains. Stands close grazing. It is a good weed fighter when well established. The grass is not difficult to eradicate. It does not tend to get "sod bound" as quickly as most grasses. While grown mostly in northern and western states, it gives indication of being adapted to a much wider area east and south. Sow 10 pounds per acre. Seed is scarce this year. Please order early. Postpaid 2 lbs. \$1.40; 5 lbs. \$3.25; 10 lbs. \$6.00.

DOMESTIC RYE GRASS

See Item No. 128 on Price List
Quick Growth at Low Cost

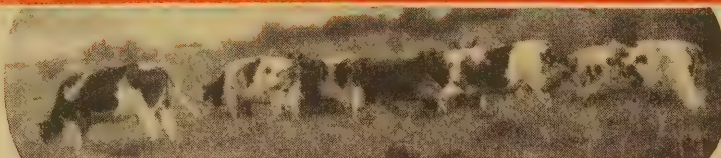

This grass is even a faster growing grass than the perennial Rye, but it should be considered an annual. It is a grass that helps to make a sod and a nice green growth early in the season. It produces a turf very quickly. This grass can be heavily productive with favorable soil and moisture conditions. It has recorded yields of 12 to 20 tons per acre in Europe. We cannot expect that here. The normal record of a single cutting being 1 to 2 tons per acre. While it is grown more extensively on the Pacific coast and grown widely for seed production it is very United States especially in combinations. When seeded alone, we suggest as much as 30 lbs. to the acre. In mixtures you can proportion it as you desire. Postpaid prices: 2 lbs. 70c; 5 lbs. \$1.50; 10 lbs. \$2.50.

PERENNIAL RYE GRASS

See Item 129 on Price list

Provides pasture while other Grasses are getting started. This does not grow quite as fast as Domestic Rye grass, but it lasts longer. It is not as long lived, or as hardy as grasses like Brome or Blue Grass but starts growing earlier in the spring. When sown in mixture with other grasses it provides quicker growth and it is therefore a good grass to use in mixtures. It prefers land of medium to high fertility. It can use quite a lot of water but is not a wet land grass like Meadow Foxtail or Reed Canary. Plants grow 1½ to 2 ft. high. Do not confuse these Rye Grasses with ordinary Winter Rye. They are totally different. Spring seedings are practiced where winters are apt to be severe. Sow 20 to 25 lbs. per acre alone or 8 to 10 pounds in mixtures. All of these grasses of course come in the Gro-Coated Brand only. Postpaid prices 2 lbs. 80c; 5 lbs. \$1.75; 10 lbs. \$3.00.

Reed CANARY GRASS

A Remarkable Permanent Grass of Very Great Value An Astonishing Grower Widely Adapted

This is a grass you can grow on exceedingly wet land and it is also a great drought resister. In one of the driest years we had in Iowa, Reed Canary grass stood out like an oasis in a desert. It yielded 3 tons per acre when it was so dry Sudan only made half a crop. Produces 2 to 3 cuttings per year. It is a great crop

for waterways. It is good for hay or pasture.

Grows 5 to 6 Ft. High

It is a very leafy grass. You almost have to see it to appreciate it. Yields up to 3 to 5 tons of cured hay per acre in two cuttings. Second crop is leafier but not quite as tall. Tests show 9.43% protein in first crop; 11.76 in second. A seeding lasts many years. Starts growing early in the spring and stays on the job until in the fall. Makes a strong sod. On land so wet cattle would bog down in it. Reed Canary grass made a sod so strong it would support a team and wagon. Its long life is indicated by a field in Minnesota that was used for hay crops for 15 years and then 18 years as a pasture. It is not a pest and can easily be eradicated by cultivation.

While Reed Canary seed is rather hard to save, there is real money in a good seed crop. With yields of 100 to 400 lbs. per acre you can get a big extra income. You can harvest the seed and then still immediately after that get a good hay crop or a lot of pasture. This is a real money making crop.

Be sure to write for our Circular on Reed Canary Grass that tells how to grow it.

Dear Sir:

I was very pleased with the seed I bought from you. It's more than satisfactory and has given me some of the best crops I have ever grown.

Yours truly,

Skiatook, Okla.

Eugene Morgan.

You may ask, "Can I grow Reed Canary Grass?" It is adapted from the Atlantic to the Pacific in the entire northern half of the United States and as far south as eastern Tennessee. Fall seeding is perhaps best in southern states. Frank Litchke of near Enid, Oklahoma, sowed Reed Canary grass in the fall. It has grown continually winter and summer for a long period of years. He grazed 20 head of Hereford cattle on 4 acres for 60 days continually and there was still plenty left. He also reported it made good hay and checked soil erosion very effectively in that wheat country.

Gordon Arbischer of Chilton, Wis., says he gets 1 to 3 loads per acre per cutting. Ordinarily 4 tons per acre in two cuttings. Seed yields range up to 450 lbs. per acre. Some of the land he has it on is subject to overflow for as long as 6 months. The stand has been kept for years.

A Big Money Maker

You can get hay and seed and pasture all in one year. First a seed crop which grows on tall stems. Then the leaves can be cut for hay and there will be plenty of growth for pasture and often a second hay crop. It will change worthless wet land to valuable acres. It will make money on good lands and it will save soils from washing.

Sow around 8 pounds per acre on a firm seed bed. Early spring seedings are most common, excepting in the south. Be sure to write for our Free Circular on Reed Canary Grass. Small lots, Postpaid: 1 lb., 65c; 5 lbs., \$2.75; 10 lbs., \$5.25. See Item No. 141 on price list.

Dear Sirs:

I have been buying my seed from Berry's for a number of years, and find that for germination your seed can't be beat. I will buy all my seed from Berry's in the future.

Sincerely yours,

La Salle, Colo.

A. F. Brantner.

IOWA GROWN TIMOTHY

THE GRASS THAT IS MOST CERTAIN TO MAKE A STAND

Buy Timothy Seed at its Best

You can secure from us the finest of qualities in Timothy seed at money-saving prices. In addition you will get the seed Gro-Coated brand. The Iowa Experiment Station recommends treating grass seed. Our Gro-Coat process is more than a chemical treatment. See pages 2-3. This gives you a large, extra measure of assurance of stands. Timothy is one of the surest grasses to make a stand. It is adapted to a wide range of soil, and it has a great deal of value. A few years back there were some who discredited Timothy, but most of these opinions now are being reversed. It is recognized as one of the best grasses and is extremely popular in the eastern part of the corn belt. Iowa still remains the chief seed producing state and from here on east it is a very good grass. 10 to 12 pounds of seed sows an acre. We are not sure we will have enough seed for the season, so we do urge you to buy early. Also, read about our clover and grass combination in pages 18, 19 and 21.

Some Important Points on Timothy

Years ago a number of tests were made on Timothy as compared with ten other grasses. Over an average of a 16 year period Timothy outyielded all other grasses. A yield of 5309 pounds to the acre, the next nearest grass 1000 pounds less and some yielding as low as 2444 pounds per acre. Timothy can be sown either in the spring or in the fall. Spring seedings use 10 pounds to the acre; for fall seedings five pounds is enough. Timothy combines admirably with Red Clover and Alsike Clover. When you combine Timothy with clover you get a bigger yield than sowing either of them separately. You will get the best quality of Timothy hay by cutting it when the plants are beginning to head. You will get the biggest yields if you cut it when the seed heads are straw colored, before they are ripe.

Like any other grass Timothy will respond to fertilizer applications and will greatly increase its yield on good land.

Berry's Prices Save You Money on Timothy

On a comparative quality basis you will find Berry's prices consistently lower than the average. This is due in part to our policy of direct-to-you sales. That makes savings in every department.

We are at the door of the World's Largest Timothy seed producing section. We therefore, have direct personal buying connections. Transportation charges are lower. The cleaning machinery we have is designed to handle the crop efficiently. Supplies of Timothy seed are larger than last year. However, prices on all grass seeds are steadily becoming stronger. A few years ago Timothy seed prices more than doubled in a very short space of time. We do not expect such wild advances but we definitely do expect higher prices to prevail later in the season. We strongly urge you to order promptly.

World Brand Grade—No. 79 on Price List

This is our Extra Fancy Quality. It is a grade that most critical customers have been demanding and using for many years. It will run around 99½ purity and high germination. The seed is bright, plump and there is no seed that could give you better assurance of satisfactory results. We guarantee satisfaction. Our direct-to-you price gives you a big saving.

Dealer's Fancy Timothy—No. 78 on Price List

This Very Fancy Grade of seed is frequently sold as the best quality by others. It is also thoroughly cleaned, nice bright seed with good growing power. It gives really high quality at a still greater saving. Price, Small Lots, either grade, Postpaid: 1 lb., 40c; 5 lbs., \$1.60; 10 lbs., \$2.85. All of our grass and clover seeds have Gro-Coat protection. See pages 2 and 3.

ORCHARD GRASS

Excels Brome in Summer Pasture Production

There has been a tremendous increase in the demand for Orchard Grass during the past few years. More and more thought is given to grass land farming. That demands a new evaluation of some of these older grasses. We have heard much about Brome. For the northern area, Brome is a splendid grass. Orchard Grass, however, is more productive and better adapted to the southern range of the Timothy region than smooth Brome. It will tolerate more heat, more drought, and will do better under lower fertility. It flourishes on rich soil but succeeds on light soil of medium fertility and also on moist heavy land. Oftentimes it does well where Kentucky Blue Grass is not successful.

It is one of the first grasses to start growth in the spring. While Brome is more resistant to winter killing, it cannot equal Orchard Grass in summer production because it starts its growth very early and you should start your animals on it before the seed heads form. Keep it pastured down.

Orchard grass is a bunch type of grass. It does not form a sod as Blue Grass or Brome, but makes an ideal companion crop for Ladino Clover, Lespedeza or Alfalfa. When grown in combination with these crops, you can also make very high quality grass ensilage will average one to two tons of hay per acre. With Clover, Alfalfa, two to three tons per acre can be expected. Sow about 20 lbs. to the acre if sown alone or 12 to 14 lbs. with a companion seeding of Brome and Alfalfa, or Lespedeza. If you are having trouble getting stands of Brome and Alfalfa, or Lespedeza, use Orchard Grass. It's good from central Iowa or south.

Learn what this crop can do for you because it has some wonderful qualities that all farmers should know about. It's a wonderful grass, too, for shady places. One of the best for that purpose. Price in small quantities postpaid: 1 lb., 55c; 5 lbs., \$2.25; 10 lbs., \$4.00. See Item Number 142 on the price list. All Gro-Coated Brand seed.

KENTUCKY BLUE GRASS

You may find that Blue Grass has become very thin in some pastures due to the drought that we had last fall. There is nothing more expensive than a thin stand of grass. It will pay you to thicken up your Blue Grass pasture by making a top seeding of high quality Gro-Coated seed or start your new Blue Grass pasture by sowing it alone or mixing it with other grasses. Timothy, Orchard Grass and Blue Grass together make a splendid pasture combination in most areas. Of course for lawn grass, if you want the Blue Grass straight or perhaps mixed with a little Red Top, can be sown either in the spring or fall. Use at least 20 lbs. per acre alone in pastures or about a pound per every 200 sq. ft. is suggested for lawns. Use commercial fertilizers on mixtures. See page 51 for special lawn grass mixtures.

Small lots postpaid: 1 lb., \$1.00; 5 lbs., \$4.50; 10 lbs., \$8.50. See item number 125 on the price list for quotations. We are one of the largest Bluegrass handlers in the United States. We are equipped to give you superior values. Because of loss of stands in the seed producing area, seed will become scarce. Be sure to order your Blue Grass early this year. Item No. 125.

Had Real Success with Berry's Seeds

Dear Sir: St. Paul, Va.
I have been ordering my seeds from you for a number of years and like them better than any I have ever tried. I have had real success.

Sincerely yours, Barney Meade

Honest and Reliable in Every Way

Dear Friends: Windom, Kans.
I have found your Company to be an honest and reliable one in every way. I'm well satisfied with your dealings.

Yours truly, Arthur A. Anderson

CLOVER and TIMOTHY Mixtures

FOR HEAVIER YIELDS AND HIGHER FEEDING VALUES

**RED CLOVER, ALSIKE
AND TIMOTHY MIXTURE**

LOT LEADER

"Regular" Grade Contains 30% Clovers

This is a fine lot of hardy, home grown, re-cleaned seed. It is all Gro-Coated of course. In making up this mixture we use more Red Clover by weight than Alsike. The Alsike seeds are smaller, therefore a smaller percentage gives about the same number of seeds per pound. By using both Red and Alsike Clover you have greater assurance of getting stands. Often Alsike will catch where Red Clover will not and thus you have better assurance of a good clover stand over the entire field. Alsike will withstand wetter and more acid soil than Red. It is a splendid idea to sow some of each in a seeding.

Increase Yields, Improves Quality

Seeding at the rate of 10 pounds to the acre will give you 30 to 35 clover seeds per square foot, and then there is plenty of Timothy, of course. Timothy supports the Clover and together they produce a tremendous amount of feed. The Clover increases the protein content of the feed. It feeds nitrogen into the soil from which the Timothy benefits. This seeding makes a very good sod. There is practically no danger of bloat in such a combination and it greatly reduces any danger from soil erosion. We have several other mixtures such as the Lot Leader in the opposite column, and others on pages 19, 20 and 24. There are combinations to fit practically every need. This gives you a seeding that is low in cost and very satisfactory in production. See Item No. 97 on the price list.

Red Clover with 25% Timothy 99% Crop Purity

In this Lot Leader we believe we have a value that you will find matchless elsewhere. It is beautiful plump seed with lots of large purple berries. This type of clover commands premium prices. You can be assured of complete satisfaction in quality when you order Lot Leader. It is an old favorite with our trade.

The use of Timothy with Red Clover is quite generally considered a wise practice. The two crops help each other as explained in the opposite column. In Lot Leader we have practically reversed the formula. You get approximately 75% Red Clover in this lot and it is all Red. It contains no Alsike. Personally, we like this richer clover mixture. There is ample Timothy to support the clover and to help check soil erosion. The seeding is practically the equivalent of a straight Red Clover seeding from the standpoint of yield, feeding quality and soil building ability.

If you will refer to Item 96 on our price list you will see that the price is very low for such a fine seeding. This is made possible because we have our buyers trained to watch for high quality combination lots that can be bought at discounts. Then we can bring these up to a uniform mixture. Thus our customers get very fine quality at a genuine savings. Not only does this seed have excellent purity and germination, it's Gro-Coated. Shipment guaranteed to please you or your money back. See Item 96 on price list.

DELICIOUS AND NUTRITIOUS

Meadow Foxtail

A long season, perennial grass

DON'T CONFUSE THIS WITH FOXTAIL MILLET OR FOXTAIL WEED

VERY PRODUCTIVE

Highly Palatable

While a new grass in this country, it has long been used in Northern Europe. It produces a higher percentage of basil leaves, than most grasses, the flowering stems are erect and usually about 3 foot tall. Cattle and sheep will graze this grass in preference to other grasses. They will eat both stems and the leaves which contain more sugar than most other grasses. It is not a real sweet grass like Sorghum, but very palatable.

How and When to Sow

In most of the Northern and Northeastern States, spring seedings are preferable to fall seedings. In milder climates, fall seedings are good. 6 or 7 lbs. per acre will make a sufficient seeding if you have a good seed bed. It can be sown with a drill, covered lightly, at the most not over an inch, and rolling after seeding gives best results. Seed bed should be fine, but firm, and as clean as possible.

Free Circular

We cannot tell you the complete story here. Write for our free Circular.

Berry's Seed Fine for 15 Years

Dear Sirs:
The seeds I have bought from you for the past 15 years have done a good job for me. When I think of seeds, I think of Berry's. I will be needing more seed for Spring sowing. Many thanks for the services you have rendered me.

Very truly yours,

Liberty, Ind.

B. F. Bean.

7 GREAT FEATURES

Meadow Foxtail grass should be used on every farm, especially if there is any land inclined to be damp. Meadow Foxtail is a wonderful grass. Be sure to try it.

- 1 Unusually palatable forage grass.
- 2 Starts its growth early in the spring.
- 3 It has good winter hardiness.
- 4 Has a wide range of soil and climate adaptability.
- 5 Has long life.
- 6 Has a long growing season.
- 7 It grows in the shade and is heavily productive.

This is one of the earliest cultivated grasses to start growing in the spring. It can be grown anywhere in the northern half of the United States. It does well where summer temperatures may reach 100 and winter well below zero. It is a tremendously heavy producing grass as the accompanying photograph will show. A Minnesota field has stood for 25 years. It works fine in mixtures with grasses and clovers.

Great for Wet Lands

Like Reed Canary Grass, it will stand long periods of over-flow. Good stands have been obtained on low wet lands that are quite alkali. It is much easier to start than Reed Canary grass, that is why many prefer it as a grass for such conditions.

Good for Uplands

Although naturally a wet or moist land grass, it can give good returns on well drained soil of medium fertility, that are fairly well supplied with moisture for winter and early summer growth. It is good to use in waterways. The pasture season generally extends from shortly after the last heavy spring frost to early heavy freezes in the fall.

Grows Well in the Shade

Like most grasses, Meadow Foxtail makes good growth in shady places. In this respect it is similar to Orchard Grass, but will stand much more wet soil. There are many places where this grass will prove itself one of the best money makers you can possibly use.

SEE ITEM No. 146. Prices postpaid 1 lb., \$1.75; 5 lbs., \$7.25; 10 lbs., \$14.00.

Excellent Success with Berry Seeds

Gentlemen:
I have had grand success with your Honest John Alfalfa, Clover Grass Mixture and Ladino Clover. We had wonderful pasture and it really made good quality hay that is easy to cure.

Yours truly, Merle Shirk.

ALL PURPOSE PASTURE MIXTURES

We have prepared two mixtures which will serve as excellent mixtures for good rich soils over a wide area. The Mixture for Permanent Pasture we call Basic No. 1 and Pasture in Short Rotations 2 and 3 years, Basic No. 2. They are described herewith. Below each one we explain how you can adapt either over to a still wider range of soils simply by cutting down on the Basic Mixture and adding one or two additional crops. Thus it is simple to have it tailor-made for your particular conditions.

BERRY'S BASIC No. 1

FOR PERMANENT PASTURES

This is a proven time-tested pasture seeding that will produce excellent results. It yields heavily. It provides plenty of pasture. There is ample grass to drastically reduce danger of bloat. There is a variety of feed that livestock likes. You get a long period of growth. Thus there are more pasture days and more pounds of gain per acre. That's what makes profits.

In preparing Basic No. 1 we have selected a splendid combination of grasses and legumes. Such a seeding will last for years. There is a little Rye Grass to establish a sod and provide some early top growth. Approximately 90% are more permanent crops which will begin production next year. The Trefoil will be at its best in the year following. All should remain for several years producing an abundance of feed for cattle or hogs.

This mixture contains approximately 25% Brome Grass; 25% Alta Fescue; 10% Orchard Grass; 5% Rye Grass; 25% Alfalfa; 5% Broadleaf Birdsfoot Trefoil; 5% Ladino. This gives you a combination of 65% Grasses and 35% Legumes. The Brome, Alta Fescue and Orchard Grass make up the bulk of the grasses. This is in no sense a cheap mixture but a top quality combination. All re-cleaned seed. It is carefully put together in our special designed mixers. It is shipped to you properly mixed together. It is of course Gro-Coated brand so that you may have the best possible assurance of getting satisfactory stands. Sow 16 to 18 pounds per acre. See Item 107 on price list.

ITEM
No. 107
ON
PRICE
LIST

BERRY'S BASIC No. 2

FOR SHORT ROTATION PASTURES

Your farming plan may call for a short Rotation pasture 2 to 3 years. This Mixture has been designed to give you a lot of feed in a short period. While it is made primarily for pasture you will also find it to give you good hay production. The percentage of clovers have been increased to give you somewhat higher nitrogen gathering crops. These are usually desired in shorter pastures.

As with Basic No. 1 this Basic No. 2 is fitted for the average type land good to fertile, well-drained land. It is built to give maximum production in the terms of pound of beef per acre. It will also make wonderful hog pasture and may be used for sheep.

Here, too, you can make the mixture fit your different soil types by simply sowing a little less of this and adding some of the crops listed below. Here again let us make it clear that we do not add any of the others for you. We could not possibly make the necessary analysis tags as many people would want it in different ways.

The Basic No. 2 comes to you all mixed and ready to sow. It contains approximately 10% Orchard Grass, 15% Alta Fescue, 15% Timothy, 15% Rye Grass, 20% Red Clover, 20% Alfalfa and 5% Ladino Clover. That then is about 55% Grass and 45% Clover. It is all Gro-Coated brand seed, thoroughly cleaned and ready to sow. Sow about 12 to 15 per acre. See Item 109 on price list.

ITEM
No. 109
ON
PRICE
LIST

How to Change Basic No. 1 to Fit Special Soil Types

For Moist or Poorly Drained Soil

If you have land that is inclined to be wet or moist we suggest that you use Basic No. 1 at the rate of 10 to 12 pounds per acre and add about 3 to 4 pounds per acre of any one of the following four crops. You can use some of each if you prefer:

Reed Canary Grass **Alsike Clover**
Meadow Foxtail **Red Top**

We cannot make these mixtures for you as that would require special analysis tags. It is a simple matter to add a few pounds to the Basic Mixture just before you sow it.

It is a good idea anyhow, to stir the seed of a mixture because the clovers tend to work toward the bottom of the sack while shipment is on the way.

For Thin or Light Soil

Use Basic No. 1 at 10 to 12 pounds per acre and about 4 pounds per acre of any one of the following crops or use some of each if you wish:

Mammoth Red Clover **Orchard Grass**
Red Top **Sweet Clover**
(If land is not sour)

For Sandy Soils

Use Basic No. 1 at 10 to 12 lbs. per acre and add 4 to 5 pounds of any one of the following or some of each:

Crested Wheat Grass **Sweet Clover**
Meadow Fescue **Red Top**

RED TOP

This grass grows under a great variety of conditions. It will grow on soils so poor in lime that most other grasses will fail. Stands a lot of wet conditions too. On the other hand it is very drought resistant. It is a grass that grows fast. It is used for quick pasture, helps prevent soil erosion on waterways. Is easy to get started. The grass grows from Canada to the Gulf, New York to California. It forms a turf quickly. It matures about the same time as Timothy and is often used in combination with it. A seeding lasts for many years. The seed of Red Top is very small. Ten pounds per acre is sufficient. Mixed four pounds per acre is good. Can be used as a top seeding on thin stands of hay or pasture lands. Sow early in the spring or late summer. Postpaid: 1 lb., 80c; 5 lbs., \$3.50; 10 lbs., \$6.50. See Item No. 127 on price list for quotation.

How to Change Basic No. 2 to Fit Special Soil Types

We have made it very simple for you to get just the combination you need for various soils. You will note above that we recommend that you sow Basic No. 2 at 12 to 15 lbs. per acre when you use it alone. If you have any of the kinds of land listed below sow 8 to 10 pounds per acre of Basic No. 2 and order some more of the crops shown under each soil type. They will be shipped separately and you can easily mix them with the Basic mixture. You will find all these crops described in this catalog and priced on price list.

Heavy Moist to Wet Land

Sow 8 to 10 pounds per acre of the Basic No. 2 plus 4 pounds of any one of the following or some of each if you prefer:

Meadow Foxtail **Red Top**
Alsike Clover **Meadow Fescue**

On Poor or Thin Soil

Sow 8 to 10 pounds of Basic No. 2 per acre and 4 pounds per acre of any one of the following or some of each:

Sweet Clover **Korean Lespedeza**
(If soil is not acid) (Use Early Strain North)
Red Top **Meadow Fescue**

On Sandy Soils

Brome Grass **Meadow Fescue**
Sweet Clover **Red Top**

Husband and Wife Are Well Pleased

Dear Sir:

Dexter, Minn.

I would like to say that I have bought seed from you for the past 15 years. It has been very satisfactory and I have always been pleased with the way you handled my orders. Also, my wife continues to buy her garden seed from you year after year. A satisfied customer, Harry Skov.

Has Found Us Reliable and Fair

Harrison, Ark.

Gentlemen:

I have been buying all my field seeds from Berry's for several years. The seed has always been very satisfactory as to quality and price. Also, I have found you to be reliable and fair in all dealings. Very truly yours, E. C. Hathcoat.

The Famous Fescue Grasses

WIDELY ADAPTED

HEAVILY PRODUCTIVE

FINE FOR PASTURE AND MEADOW

These grasses have such great merit that we want to emphasize their importance. They should be in pasture on many farms.

ALTA FESCUE

This is an improved strain of the Tall Fescue. It should not be confused with the Meadow Fescue which perhaps has been more commonly grown. Alta Fescue grows much taller and has more dark green basal leaves. They are much broader than that of Meadow Fescue. The plant has a long growing season. Where winters are not severe it will in fact remain green all winter. It is not as winter hardy as Brome Grass but it will grow satisfactorily with around 15 to 18 inches of rainfall. While it prefers fertile moist, rather heavy soil, it will thrive on many soil types except those that are extremely light. Alta Fescue has a heavy root system that will penetrate heavy sub soils. It is moderately tolerant of alkali if moisture conditions are favorable and will thrive on quite acid soil.

We are unable to tell the difference between Alta Fescue and the Ky. 31 Fescue. We do not know of any authorities who can tell them apart, therefore the information given here, and on Ky. 31 in the opposite column apply equally to both varieties. They have tremendous capacities as pasture plants, also make good hay on fertile soil.

THREE ALTA FESCUE VALUES

We have obtained three wonderful values in this seed. (1) State Certified Seed. (2) A high quality re-cleaned lot of seed (3) A beautiful lot that contains about 9% quick growing Rye Grass. Any of them are capable of giving you excellent results: **Special Mixed Lot, See Item 148. Non-Certified Item 149. Certified Seed, Item 150. Certified Seed, small lots, postpaid, 1 lb., 55c, 5 lbs., \$2.50; 10 lbs., \$4.50.**

KENTUCKY 31 FESCUE

This is also a selection of the tall Fescue. It was made from a Kentucky strain. One of our own men who has a farm near Clarinda, Iowa sowed five acres to Kentucky 31 Fescue, the other with some Alfalfa and Red Clover. It is one of the "first" fields in this area and farmers drove from miles around to see it. Everyone who saw it decided then and there they wanted some of it. This five acres was sowed in 1949 and began pasturing it in April. He had 35 head of hogs on it all summer. It grew so fast he had to cut it for hay, took off 150 bales of hay and as soon as the hay was baled, the hogs were back on and stayed on until early October. The 10th of October the growth was still so dense it was like walking on thick carpet. The leaves were ranged up to three feet long. The leaves were heavy, green and succulent, extended they will produce as long a growing season that grass having as much, give you as big return and 147 on price list. Certified postpaid: 1 lb., 55c; 5 lbs., \$2.40. Regular Ky. 31, postpaid: 1 lb., 50c; 5 lbs., \$2.15.

**GRO-
COAT**

**GRO-
COAT**

NEW SOFT LEAF ALTA 144 FESCUE

This is a superb new strain of Alta Fescue. The leaves are darker green, softer and smoother. They remain palatable for a longer period. Live stock like its lush, green growth. Even as it gets older it still retains this soft texture. You can readily see why there is such a tremendous demand for this new grass. It has an extremely long growing season. Where winters are not too severe it will stay on the job year around. It is even deeper rooted than the regular Alta or Ky. 31. The plant can use deep soil moisture throughout the summer. It will thrive on most any soil excepting light land. It will stand a lot of overflow and quite wet conditions in general, yet it is also a good drouth resistant grass. It has the same heavy root system described in the Alta Fescue above. It helps to put a lot of humus in the soil. In **Alta 144 Fescue** you get everything that regular Alta or Ky. 31 can give you plus the softer leaf.

The Finest Certified Seed

The demand for Alta 144 Fescue last year exceeded our supply. We are better fixed this year. We have arranged for a good supply of finest quality certified seed. It's a beautiful Blue Tag grade. You can't buy it any nicer. We couldn't arrange to have it Gro-Coated in the production area so we had to break the seals when the seed came to us in order to Gro-Coat it. While there will be no state seals attached it will be the genuine article and every pound Gro-Coated to give you greater assurance of getting better stands. Price postpaid: 2 lbs., \$1.25; 5 lbs., \$2.75; 10 lbs., \$5.25. See Item 144 on our price list.

Dear Sir:

I got the best hay crop from the seed I bought from you two years ago that I have ever had on my farm.

Sincerely,

Kettle River, Minn.

William A. Karki.

Gentlemen:

I have always found your seed to be of good quality and have had consistently fine results with it.

Very truly yours,

Bertrand, Nebr.

Swenson Brothers.

**OUR HEAVIEST

MARVELOUS MIXTURE

2/3% CLOVERS

BALANCE
TIMOTHY

Item No. 95 on Price List

SEE SAMPLE ENCLOSED

The Most Popular Clover and Grass Seed Mixture

Now Better Than Ever Before Contains More Clovers and It's "GRO-COATED" BRAND

ECONOMICAL AND HIGHLY SATISFACTORY

QUALITY GUARANTEED TO PLEASE

This always has been our biggest selling mixture and now that it contains over 65% Clovers it is in enormous demand. It is rich in fine hardy, heavy yielding clovers. It contains, Red, Alsike, Sweet, Alfalfa and Ladino Clover. The balance is Timothy. This seedling will give you an average of 50 to 60 clover seeds and 80 to 90 Timothy seed per square foot when sown at the rate of 10 pounds to the acre. Since it is all Gro-Coated, you have wonderful assurance of good stands for pasture or meadow.

Please examine the sample closely. Note the heavy Clover content. Each one is new crop domestic. Thousands of satisfied customers praise Marvelous Mixture. Some of the letters reaching us read as follows:—"Never had a finer stand. Saved about half in buying this item." "Have been using it several years with the best stands and yields of any seed used." "Got 21 loads off 9 acres first cutting and 11 loads of Alfalfa second cutting." "Have used Marvelous Mixture for 8 years and never been disappointed." We will send your money back if you do not consider it a great value on which you have made big savings. See page 33 for guarantee on all seed.

PROFIT MAKER

A SEEDING THAT LASTS SEVERAL YEARS

Such a combination of Clovers and grasses makes extremely heavy yields of hay. Our customers report highly satisfactory results. Big crops. Fine quality and big savings in cost. Many use it. The Alfalfa in the mixture helps to establish the crop on your land. The Sweet Clover opens up the soil and adds much nitrogen. The Red Clover and the Alsike fill the lower growth while the Timothy supports them and adds to the weight and growth of all. It is a great seeding and our customers are enthusiastic about it. Year after year Marvelous Mixture continues to be our biggest selling item.

You too, can become enthused over its wonderful production and high feeding value. See how it checks soil erosion and enriches your land. That dense heavy mat of Clovers is a joy to behold. We sell many thousands of bushels of Marvelous Mixture every year. With present low prices on such a combination of all home grown seed, its sale should smash all previous records. In our opinion there is no other mixture that will give you as much Clover for the money as you will obtain in this Marvelous Mixture. See Item No. 95 on Price List.

Berry's Famous 5 WAY MIXTURE

Item No. 100 on Price List

Contains Red Clover, Alfalfa, Alsike, Timothy and Ladino

Now Contains 50% of Clovers, Including Ladino—All Gro-Coated Brand

Every year our Famous 5 Way Mixture comes closer and closer to Marvelous Mixture in popularity. It is finer and better than ever. The percentage of Clover is heavier, 50% of clovers by weight, including some of that expensive Ladino Clover. It is a splendid mixture for semi permanent meadows and pastures. One that provides both quantity and quality of feed. Sow 8 to 10 pounds per acre. Similar to Marvelous excepting that we do not put the Sweet Clover into it. This is Gro-Coated. You have extra assurance of better stands and larger yields.

You can thus figure on a very reasonable seeding cost and a mixture that will give you top results. It is all

domestic seed and contains no imported item. We are able to buy many lots of mixed seed at a discount just because they are grown in a mixture. We blend such lots together and add Clovers or Alfalfa as may be required to make it as uniform as possible. Its high Clover content means big yields in addition to fine feeding and soil building qualities.

This mixture is just next to Marvelous Mixture in sales to our customers. We do not add any Sweet Clover to this combination. It has straight Timothy for the grass seed item. There are other combinations listed throughout the catalog but we believe this is one which will please you as much, if not a little better, than most. The selection of a mixture to suit your requirements will depend somewhat on your soil and seasonal conditions and the purpose for which you want the crop.

We have combinations to suit almost every purpose and also we have mixtures at different prices to fit most every pocketbook. Whatever your seed needs insist on Berry's Gro-Coated Brand for best results.

See Pgs. 2 & 3

Ransomville, New York.

Dear Sir: I sowed Gro-Coated Marvelous Mixture and Alfalfa seed and am very well satisfied. The crop is far ahead of that from seed not Gro-Coated. It is the finest stand I have obtained in 27 years of farming.

Very truly yours,
Raymond Bradley.

Wilson, Kansas.

Dear Sir: The Gro-Coated Alfalfa Seed that I sowed came up good. I sowed less seed than usual yet I got a better stand. It was planted on a creek bottom and it was flooded twice with four feet of water but there is still a good stand.

Yours truly,
Arthur Grubb.

FOUR GREAT VALUES

"RANGER" WILT RESISTANT ALFALFA

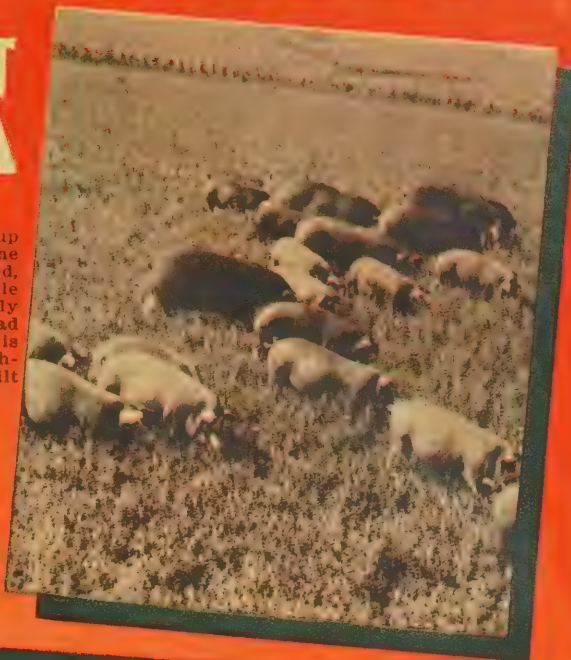

The Most Popular Alfalfa for 1953

The bacterial wilt of Alfalfa seems to be coming more widespread. It seldom shows up in a stand the first year, sometimes not until the third. When it hits, it can hit hard. The affected plants throw up green shoots and healthy plants. All the cuttings will be affected, and after the first sharp frost the plants affected by bacterial wilt will be frosted while healthy plants will be uninjured. If you find such plants in your field cut them diagonally with a knife. Peel the bark from the root. If the color is different shades of brown instead of white healthy roots, you probably have bacterial wilt. Sometimes the loss of alfalfa is blamed on winter killing when actually it is wilt that is doing it. There's absolutely nothing you can do to cure a field affected with bacterial wilt. Your only remedy is to sow wilt resistant varieties. There are two principal ones on the market now, Ranger and Buffalo. Buffalo is on the opposite page. It will cost you a little more money to plant this Alfalfa but if you are in the wilt area or anticipate wilt, it is by far the cheapest that you can sow.

Ranger Is Hardy, Fine Stemmed, Leafy, Long Lived

It is the most winter hardy of the wilt resistant types. Widely adapted and especially recommended for the northern half of the corn-belt across the nation. See map page 32. We have four very special values in Ranger Alfalfa as listed below, all Gro-Coated and every one a splendid value.

Farmers
Report
GRO-COATED
BRAND SEEDS
Grow Faster

"LOT VITALITY" RANGER

Certified Blue Tag quality not only has to be Certified as to varietal purity from field inspection but also as to quality of the seed. However, all the seed that is produced on that field does not make the Blue Tag quality. Hence, it is not certified. Genetically however, it is exactly the same thing.

This seed does not have as bright a color or as high a germination as the Blue Tag Ranger described in the opposite column. It will however, produce exactly the same kind of Alfalfa because in many instances the seed comes from the same plant. A great many of our customers have found that these grades of Alfalfa give splendid performance in the field. Take for example, our Honest John Alfalfa. There are many farmers who will sow nothing else. Yet Vitality Ranger is much higher quality than Honest John. It will classify as a Choice to Fancy grade. This seed will be a little off in color, the purity will run around 98% and the germination 75%. Since the berries are somewhat smaller you get about the same number of sprouts from a pound of seed. We know there is splendid value in this quality of seed and that is why we are proud to offer it to you in our catalog so long as the supply lasts. See **Item No. 28** on the price list.

CERTIFIED WESTERN RANGER

When you buy Certified Ranger Alfalfa you have positive assurance that it is adapted to your area, no matter where that seed is produced. Certified seed can be produced only from foundation or registered stock. State authorities will not certify any seed if it has been grown from foundation stock for over six years from the original seeding date. The foundation seed of course comes from the north. During this period of six years there is no major genetic change that takes place in the variety. Therefore, it still retains all characteristics of winter hardiness as when it was first started. You will find practically all agricultural authorities agreeing on these points. State Certifying agencies and crop improvement officials maintain this and they especially guard the buyers interests. You may be certain therefore, that when you buy this western grown Ranger Alfalfa, that it will be adapted wherever Ranger Alfalfa is grown. Also when you buy the Blue Tag quality you may know that you not only have the genuine hardy Ranger, but that you have the very best quality. The finest in color, plump in berry, high purity, strong germination. Berry's offer you the extra assurance of getting a good stand of this fine new alfalfa in this exclusive Gro-Coated Brand processing. The ultimate in seed protection is yours for only a few cents per acre cost. See **Item 25**.

SEE PAGES 22, 29, 30 & 31 FOR OTHER ALFALFA VALUES

NORTHERN CERTIFIED RANGER

As explained above, Certified Ranger will always carry with it the hardy characteristics of the parent, regardless of where grown. Seed from Northern areas costs somewhat more because the yield per acre obtained is not equal to those obtained farther south. However, you may prefer to pay the difference and get the seed from this northern section. Be sure to check this carefully on your price list and note that there are two lots of Certified Ranger, one Western and the other Northern. Both are strictly top quality lots and of course genuine in every respect. Either one of them should give you equally satisfactory results. In the event our supplies of Northern are exhausted we reserve the right to ship the Western Certified and rene fund the difference. Western origins are fully equal to the Northern in every respect. One thing we do emphasize and that is the advisability of sowing a wilt resistant variety if there is wilt anywhere near you. The offers of Ranger Alfalfa on this page are considered to be matchless values because all are Gro-Coated Brand seed and that gives you extra assurance of getting better stands. See **Item No. 26** on price list for quotations.

WORLD BRAND RANGER

We were able to secure some of the Ranger Alfalfa from fields that were not certified because the farmers did not go to the trouble of complying with all the technicalities required for Certification. We have obtained this seed from sources that we believe are entirely dependable and offer this as genuine Ranger. You can get a very good idea as to the quality of this World Brand Ranger by looking at the sample of Lot Gold Alfalfa that is enclosed with this book. It will have the same fine bright color and top-notch quality. It is strictly fancy grade in every respect. Being grown in the northwest it retains its characteristics of hardiness without question. So for top quality genuine Ranger Alfalfa seed at lowest price, see **Item No. 27** on price list.

OUR BIGGEST SELLING CLOVER VALUES!

This is a beautiful lot of seed. This hardy Red Clover seed was purchased at a very sharp discount. Our buyers found some lots that contained some Alfalfa seed. The crop purity was high but because it contained Alfalfa it could not be sold either as Red or Alfalfa and therefore the discount. In order to make these lots uniform we have added sufficient high quality Alfalfa to make approximately 25% alfalfa seed. There are many farmers who make a practice of sowing mixed seed. Therefore, to those such a seeding is an unusually attractive offer. This seed is all thoroughly re-cleaned, all high in purity and strong in germination. You can use this seeding just this way and it will make a splendid combination for you, we suggest 10-12 pounds per acre. Or you can take it as a base for any other combination that you may wish to make. We are constantly striving to give our customers the benefit of our wide experience and great purchasing power. In this Lot Beauty we have a matchless value. It's beautiful seed, free of noxious weeds, 99% crop (Red Clover-Alfalfa) purity. See Item No. 31 on price list for quotations.

LOT CHAMPION ITEM No. C 60% Alfalfa—40% Red Clover

This special value became available just before this catalog went to press. It is all beautiful, hardy northwestern grown seed. The extreme low price that you will find on our price list was due to the fact that this also was a lot of seed that was grown mixed, similar to Lot Beauty described above. However, in this case the predominant seed was Alfalfa with considerable Red Clover in it. The percentages are not exactly 60 and 40 but come very close to that figure. It will have a total crop purity of 99%. It will be free of noxious weed seed. It may contain a trace of other crop seed such as Sweet Clover possibly 3-5%. For color, size of berry, freedom of weeds, germination, hardy characteristics this quality is outstanding and our special price on Gro-Coated Brand makes it truly a 5 Star value. Thousands of farmers prefer this type of mixed seeding which will make about half alfalfa and red clover when seeded 3/5 alfalfa and 2/5 red clover. Recommended seeding rate 10-12 pounds per acre. As long as this lot lasts you will find it one of our greatest values. See Lot C on our price list under mixtures.

"Golden Acre" CLOVER COMBINATION

SIX DIFFERENT LEGUMES

This is a great combination that we have prepared to meet the demand of many customers. Some have grass seed of their own and want a variety of Clovers to mix with it. Others prefer to make a seeding of straight clovers but like a variety. They figure there are several advantages to this. First, if one fails to catch due to unfavorable soil or weather conditions there are plenty left to make a full stand. When used in pasture combinations the different clovers give a prolonged pasture season as some do best when it is hot, and others early. Even when cut for hay it is desirable to have a good aftermath for pasture or plowing under green. If you happen to strike a wet year there is Clover for that kind of a season.

Contains Alfalfa, Red Clover, Sweet Clover, Alsike, Ladino and Birdsfoot Trefoil

We can give you an exceptionally low price on this wonderful seeding because we can use in it some lots of seeds that are grown mixed. Those can be bought at sharp discounts under the prevailing market. We add other clovers to make a balanced seeding. Red Clover, Alfalfa and Alsike makes the largest percentage. Also contains enough Ladino to produce a nice stand of that valuable Clover in with the others. The addition of about 10% Birdsfoot Trefoil also adds greatly to its value. See Page 27.

7 to 8 pounds per acre will give you a good stand. That makes the cost of seeding exceedingly low. **SEE ITEM NO. 58 ON PRICE LIST.** (If you have mislaid our price list please drop a post card and another one will be promptly sent.) Remember, our prices are for Gro-Coated Brand Seed.

ALFALFA, RED CLOVER & TIMOTHY Big 3 Mixture 60% Alfalfa and Red Clover

This splendid seeding is similar to our Famous 5 Way Mixture described on page 21. This however, does not contain the Alsike and the Ladino and it contains more Clovers, 60% of clovers and Alfalfa combined, and approximately 40% of Timothy. If you want something with Alsike and Ladino you can select the Lot Just-Rite described below, or if you want them all take the 5 Way. This Big Three however, with its extremely high Clover percentage is even a grater value. The addition of Timothy is a big help in many ways. It makes a better sod than just clovers alone. This is valuable where you have trouble with soil erosion. With the grass in it there also seems to be a little less danger of heaving in the spring which so often times kills out straight clover or Alfalfa seedings. Clovers feed nitrogen to the Timothy so that it increases in feeding value and the Timothy also helps to hold the Clovers and alfalfa more erect. There are two basic reasons why we are offering our trade so many prepared mixtures. One; it saves you the trouble of doing so, two; we can give you as a rule greater values because we can buy mixed lots at lower cost than we can buy the straight seed separately and then mix it and make combinations that we report. All of the seed on this page, all of our grasses and clovers are Gro-Coated which we consider a tremendous advantage. Suggest sowing about 10 pounds to the acre although you can sow less. Item No. 102.

LOT Just-Rite RED CLOVER

**With Alsike, Ladino and Timothy
Now Contains 50% Clovers**

Here is one of our favorite combinations made richer and better than normal. Mixed seedings are becoming increasingly popular. Timothy is considered one of the best grasses to use with Clovers. It helps these legumes to grow erect and it is better than straight Clover for soil erosion control. The Timothy roots hold the soil better. The Clovers feed nitrogen to the Timothy, thus increasing its growth and improving its feeding value. In many areas payments are being made for making such seedings. But whether you get "outside" money or not, it is good business to hold the soil you have by using grass seed. Use the Clovers to build up soil fertility and to produce high protein feed.

A Highly Satisfactory Seeding

You can get an excellent stand by sowing at the rate of 7 lbs. per acre. In fact at 6 lbs. per acre you will have an average of over 24 clover seeds per square foot, plus the grass seed. It is economical and you have practically double assurance of getting a good stand. There is plenty of both Red Clover and Alsike, so if either should fail completely there still would be a good stand of the other. Alsike will stand more wet conditions and more acid soils than the Medium Red Clover. The Ladino Clover adds a great deal to the value of this seeding. See Page 27 for information on this wonderful crop.

The seed is all hardy re-cleaned stock. The seeding has the ability to produce excellent stands of heavy yielding hay or pasture crops. The feed is of excellent quality. You can build up your land and check erosion with it. You can save very materially on your seed bill. This Lot Just Rite Mixture has been pleasing our customers for years. **SEE ITEM NO. 103 ON PRICE LIST for "GRO-COATED" price.**

Dear Sirs:

I never had a stand of Alfalfa and Clover as nice as I had this year. I sowed less seed per acre, and got a better growing crop. I sure want Gro-Coated seed on my future purchases.

Harvey Thield

Rosalie, Nebr.

Gentlemen:

I compared Gro-Coated Alfalfa seed with other seed which was not Gro-Coated. The stand from your Gro-Coated seed is almost twice as great.

Walter Cappel

Arkdale, Wis.

HARDY RED CLOVER

Berry's Famous **WORLD BRAND QUALITY**

IDAHO

World Brand Quality

Idaho grown Red Clover always commands a premium on the market. The seed is unusually beautiful. It has fine color. It is bright, clear and clean. The plump seeds are full of vitality. They have strong germination. This seed is produced under conditions that make the finest quality possible. There are thousands of farmers who greatly prefer Idaho Red Clover over any other.

In our World Brand grade of Idaho Red Clover you will receive an extra fancy quality. It is as nice as money can buy. The seed will average 99% pure, 90% or better live seed. You can have the satisfaction of knowing when you sow this seed that you cannot buy a better quality. Of course, when the seed comes to you it will be Gro-Coated and that, of course, covers up this bright appearance. If you will just rub a little bit in the palm of your hand you will see that bright color underneath which indicates its very strong vitality and its ability to make splendid stands. By having it Gro-Coated, of course, you know you have the very best possible assurance of getting satisfactory stands. Some customers say they can sow less seed, and thus it costs them less than anything else to use. Other customers prefer to make their regular seeding and to make their gains from the heavier stands that result. Therefore, if you want the very finest of values that are obtainable in the way of Idaho Red Clover, specify Berry's World Brand Idaho grown. See Item No. 35 on the price list for quotations.

LOT MORE HARDY IDAHO

This comes from the same area producing our World Brand described above. It contains a small amount of crop seed like Alfalfa, Alsike or Sweet. There is about 4% of that crop seed in Lot More Hardy. Aside from that it is equal to the World Brand listed above for quality. It can be purchased at a big saving. See Item No. 36 on the price list for quotations.

Wonderful Service—Big Yields

Sirs: Le Sueur, Minn.
I have been well pleased with the seed I bought from you. We have had excellent yields and wish to thank you for your wonderful service.
Very truly yours, Harold C. Budke.

WORLD BRAND

Central States Medium Red

Extra Fancy Quality at Money Saving Prices

Medium Red Clover is one of our feature items in value giving this year. We accumulated very fine stocks early. This is what makes it possible for us to give you the values that are offered at this time. See enclosed price list for quotations or get our latest price list. We guarantee to give you more value for your money in Medium Red Clover than is obtainable anywhere else. That is a broad statement. We are willing to back it up with a money-back guarantee. Your money, plus freight, refunded if you do not find this the finest high-quality Red Clover value on the market today.

This seed will come to you with the Gro-Coat protection. That, of course, assures you of getting best possible stands from this seed. Read pages 2 and 3 of this book. This Coating that we put on this seed naturally gives it a dull-looking color. If you will rub some of this seed in your hands you will bring out that beautiful bright color underneath so you can see that you are getting as nice a quality of Central States Red Clover as money will buy. In many areas supplies of Red Clover are much shorter than they were last year. There will probably be a tremendous demand because drouth has caused some seedings of last year to go out. Therefore, you can expect advancing markets. This is why we recommend to all our customers to buy Red Clover seed just as early as possible this year.

In this Central States Medium Red Clover you will get seed that is thoroughly adapted to the Corn-Belt. You will find it thoroughly dependable and we are proud that we can offer values like this to our trade. Small lots, either Idaho or Central States: 1 lb., 70c; 5 lbs., \$3.00; 10 lbs., \$5.50, postpaid. See Item No. 34 on price list for other quotations.

Saves 1/3—Gets Heavier Stands

Dear Sir: Fennimore, Wisc.
With some of our seeds, I get heavier stands at a savings of as much as one third less cost.
Sincerely yours, Clarence R. Block.

FANCY GRADE

This Fancy grade runs our World Brand described above, a very close second. This is Central States Red Clover. Normally it runs around 98% purity and 85-90% live seed. It may contain a trace of crop seed. You will find it very free of weeds and capable of producing a splendid stand for you. It is Gro-Coated, of course, the same as all of our Clovers. It will give you a very good Clover seeding at an extra saving in seeding costs. See Item No. 33 on price list.

PLANET OR CHOICE GRADE

This is also Central States Red Clover that contains a few more smaller and off-colored seed than in the Fancy or World Brand quality described above. However, with more berries per pound this is a very serviceable lot. We sell a great deal of this lot every year. Because it contains a little crop seed and is a little off color it can be priced to give you a very substantial saving, especially under the World Brand price. While its looks are not so nice, with Gro-Coat processing you have every insurance possible for it to give you satisfactory results and it's a real value at prevailing prices. See Item No. 32 on price list.

OUR EASTERN SHIPPING POINTS MEAN BETTER SERVICE AND BIGGER SAVINGS FOR EASTERN CUSTOMERS

BE SURE TO INOCULATE CLOVER SEE PAGE 34

KENLAND

SEE NEXT PAGE FOR MIDLAND RED CLOVER
State Certified Seed—Blue Tag Quality

Kenland is a variety of Red Clover that has been bred especially for disease resistance. In producing this Clover seven superior strains of Red Clover especially adapted to the southern corn-belt were selected for several generations. The plants that have been adapted from this cross. It has the same general development as the Cumberland but it is far superior to being used for the southern half of the United States. You can be assured of genuine Kenland produced from foundation stocks in our certified seed. The certified seed is not Gro-Coated because we do not break the seal unless you order in quantities other than the regular 60 pound size. Small lots postpaid: 1 lb., 85c; 5 lbs., \$3.75; 10 lbs., \$7.25. See Item No. 37 on Price List enclosed.

Our Special Low Prices on all clovers are on a wholesale basis.
See Our Latest Price List. Drop us a card if you have mislaid it.
We Will Mail One Promptly.

MAMMOTH RED

The Heaviest Yielding of All Red Clovers

Mammoth Red Clover seed has for years sold at a premium price over Medium. This year it so happens that weather favored the production of Mammoth and there is a proportionately larger supply. That is why this year the price of Mammoth is even a little lower. You have here an opportunity to buy the very finest of seed at a very low cost. Our seed is GRO-COATED brand to give you extra assurance of getting fine stands.

Mammoth matures its seed crop somewhat later than the first cutting of Medium. Most all its blooms form at that time. It does not, as a rule, bloom the second time like Medium. The growth of Mammoth is taller and heavier. Its one big hay crop is extra large. The second growth makes wonderful pasture and is great for plowing under. There usually is not a second hay crop. This Mammoth Clover fits into some farming plans better than Medium. Many like it better in pasture combination because it is longer lived. We recommend Mammoth as a fine crop to use for plowing under to build up the soil. You can afford to use it liberally at present prices.

World Brand

This is top quality Mammoth. The finest hardy northern grown seed. Beautiful color. High purity and germination. See Item 41 on Price List for big money-saving prices.

If needing a special mixture of Mammoth and Sweet Clover for plowing under, write us for samples and prices advising what you want. See also page 35.

Planet Brand

A very serviceable and dependable quality of Mammoth. May contain a trace of crop but is capable of producing excellent results on your farm. See Item No. 40 on Price List.

CERTIFIED MIDLAND

This is a Medium Red Clover that is the result of selections from stands of Clover that have been maintained on various farms throughout the Central Corn-Belt for a number of years. It has been selected for its ability to yield well, produce good seed crops, as well as hay crops and to be resistant to diseases most prevalent throughout the central area. It is considered somewhat more winter hardy than the Kenland described on the previous page. Remember this is Medium Red not Mammoth Clover. Beautiful western grown hardy new crop seed. See Item No. 39 on price list.

LOT BIG BOY MAMMOTH

We can offer you this lot at a very sharp discount in price because it contains some crop seed. It will run 99 3/4 % pure, including 4 % crop which is mostly Sweet Clover. You can get this at a reduction of about \$7.00 a hundred in price, and that means a tremendous saving. It has a growing power of 85 to 90 %. Is a splendid color. Bright, big berries. It could easily pass for the best grade so far as seed appearance is concerned. It will do just as good a job for you in the field. We know that our customers like this kind of seed because we sold tremendous quantities of it last year. This is one of our biggest sellers. See Item No. 42 on price list.

ALSIKE CLOVER

THE CLOVER THAT GROWS UNDER UNFAVORABLE CONDITIONS

LOT FANCY

This is a very nice lot of Alsike Clover. You can get fine stands from seed of this character and you can buy it at a very substantial saving in price. This will amount to around \$7.00 a hundred over our World Brand quality and the saving is even greater when you compare it with the average quality of this grade even without Gro-Coating. The difference between the World Brand and the Lot Fancy is largely one of color. The purity and germination tests will run a little lower but it nevertheless remains a very good serviceable lot of seed.

PRICE LIST

Inoculate All Clover
Seed

WORLD BRAND

Alsike is a Clover that is adaptable to conditions that are unfavorable for other clovers. It is a very valuable crop. Pound for pound it is higher in feeding value than Red Clover. It will grow on wetter land than Red Clover and also is not so sensitive to acid conditions. You may be passing up a crop that you are needing when you pass up Alsike. It is a fine stemmed perennial clover. It has a beautiful green color. Less dusty than Red. Under favorable conditions will grow three to five feet tall. Prefers loam or heavy land. It is an excellent practice to sow a couple of pounds of Alsike with Red Clover. It helps to secure a better stand and a thicker growth. Alsike is generally easier to get started. The seed is smaller, five to six pounds per acre are a plenty. Stands trampling well and is good for pasture and makes wonderful hay.

Finest Quality Hardy Seed

World Brand is beautiful, rich, dark green colored Alsike seed, has large berries, strong vitality, and is in our opinion the finest Alsike clover that can be had. I know you will be proud to show this great Alsike value to your friends. We guarantee you a big savings on GRO-COATED brand seed. Postpaid 1 lb., 75c; 5 lbs., \$3.00; 10 lbs., \$5.50.

30 Years of Savings and Satisfaction
Dear Sirs: Manlius, N. Y.
Berry's has been supplying me with seeds for over 30 years. I have always found them very satisfactory and also cheaper than I could get them at home. Your service has been prompt and courteous.
Very sincerely yours, M. A. Pidcock.

Seed, Prices and Service Please Him
Moravia, Iowa
Dear Sir:
I have been buying seed from Berry's for the past 10 years. Dealing with you has always been a combination of good seed, reasonable prices and excellent service.
Respectfully, Peter Crestani.

BROADLEAF BIRDSFOOT TREFOIL

Inoculation Included on All Trefoil Orders

Use of this very remarkable legume is growing by leaps and bounds. It is a long-lived, deep rooted legume that will grow on poor land or rich land, on wet acres or dry ones. It is a great crop for pasture. It stands a lot of trampling and close grazing. It stands up under heat. It is grown very freely in New York State as well as in States farther South. The Iowa State Experiment Station states in one of their bulletins that their own experiment, plus reports from many farmers, indicate that it is an unusually well suited legume for permanent pastures in Iowa. What it does in Iowa, it can do anywhere in States having similar climatic conditions as well as in areas South of-us. New York State has, perhaps, had even a wider experience with the Trefoil than any other State.

Do not confuse Broadleaf Birdsfoot Trefoil with ordinary Yellow Trefoil. The crops are quite different. The Birdsfoot Trefoil is one of the best types. The plants grow 18 to 36 inches long. The crop looks very much

like fine stemmed Alfalfa. It has a deep tap root with branches. The feeding value is high. Hay composition shows Protein 14.24%, Fat 2.90%, Fiber 23.60%, Calcium 1.10%, Phosphorus .28%. We had some very wonderful results with it in our experiments here at Clarinda. We had some land that we wanted to put in a row crop and sowed it to Broadleaf Trefoil. It was sown very late, along toward the first of June, and it was in bloom in August and it made a great abundance of fine stems and heavily set with leaves.

What Kind of Seed to Buy?

There is a domestic and imported Broadleaf Birdsfoot Trefoil. Some have jumped to the conclusion that if it's home grown it must be better. It is largely on this assumption that seed growers in an eastern state have created a demand which has enabled them to get very fancy prices for their seed. We sold it last year and could again this year, but frankly, we don't think it is worth the price. It is our sincere belief that our imported seed is superior and not inferior. We believe it will yield better and that it is probably just as winter hardy. In fact, seed dealers in this eastern state tell us that farmers in that state are taking the imported in preference to their home grown seed, so they have to peddle their high priced seed in other states.

Our aim is to supply our customers with the best of seed, but we also expect to save them money. If we did not consider our Imported Trefoil by far the best buy, we would sell you the other. We know our seed is good and well adapted to the Trefoil area.

Broadleaf Birdsfoot Trefoil is adapted to a wide range of soils. It produces seed abundantly. It sets seed even when closely grazed. After it is well established, it has a high acre production. The crop is palatable. It has a high feeding value. It is able to maintain itself in competition with sod forming grasses such as Blue Grass. It can survive severe grazing abuses. It is winter hardy. We have had no reports of bloat as yet on Birdsfoot Trefoil. It probably is because it is so fine stemmed and not sappy. Trefoil has done well with Timothy and also with some types of Brome Grass. It has been grown on some very thin land. Write for our free circular on Trefoil. It gives far more detailed information. Sow around 4 to 5 pounds of seed to the acre. See item No. 65 on price list. Small lots prepaid: 1 lb. \$1.35; 5 lbs. \$6.50; 10 lbs. \$12.50.

EMPIRE STRAIN

Birdsfoot Trefoil

This is a superior strain of domestic Broadleaf Trefoil discovered in New York in 1934. Since that time its popularity is widely known because of the superior features over the Italian and French strains. The Empire strain is very hardy, being preferred in the Midwest, northern sections of the Northwest and in the New England States. It is a very good yielder and is extensively used for both hay and pasture. Every effort is being made to increase the source of seed supplies, however to date there is still inadequate stocks to supply the demand. Our supplies are quite limited and while they last we can offer both the Certified and Genuine non-certified grades.

POSTPAID PRICES: CERTIFIED: 5 lbs., \$11.75; 10 lbs., \$23.00
NON-CERTIFIED: 5 lbs., \$10.25; 10 lbs., \$20.00

Item No. 66

LADINO GIANT WHITE DUTCH

FOR QUANTITY PRICES SEE ITEM NUMBERS 62 & 63

THE NEW 4-PURPOSE PASTURE CLOVER

This clover is largely used for pasture but it also can be put in a silo or cut as a hay crop. It has big profit possibilities as a seed producer if the season is not too wet.

Ladino is a widely adapted, easy to start, perennial clover. It is very palatable and nutritious. High in mineral and protein content. It is among the earliest legumes to start growth in the spring. Produces abundantly on upland of fair to good fertility. Will stand wetter land than Alfalfa or Red Clover. Good on loam and clay land.

It will grow two to four times as large as White Clover and six times as big as English Wild White Clover. Stems are erect, 10 to 15 inches long. Also has fleshy creeping stems that root at joints. Covers the ground thoroughly. One plant may occupy 2 or 3 square feet of space. Blossoms are as large as Red Clover. It is especially valuable mixed with other grasses like Timothy, Blue Grass, Orchard Grass and is sometimes used with Red Clover or Alfalfa in pastures.

Pennsylvania reports Ladino used as a poultry range, yielded as high as 30 to 40 tons of green feed per acre. May run as high as 30% protein on a dry basis. An 8 acre range carried 2500 to 3000 head of poultry from April until late October. On a dry basis, yield was calculated at 5.4 tons per acre. Illinois reports indicate 3 cows per acre may be pastured throughout the grazing season. Ohio tells of two cows and three calves per acre the entire season without any other feed.

WIDELY ADAPTED

It is being grown in most states from the Atlantic to the Pacific and south into Tennessee. Michigan says it can be used for hay, silage or pasture. Illinois says it is adapted to the entire state. A Kentucky report says it grows practically every month in the year. We recommend it for most any section and soil, unless soil is low in phosphorus. Phosphate and those elements can be readily supplied. On sand or very heavy clay we do not recommend it. The clover is shallow rooted and often does well on land underlaid with hardpan. It is impossible to tell you in this limited space all the wonderful features of Ladino. We urge you to try some and see what it will do. Ask for our free descriptive circular on Ladino.

A little goes a long way, there are close to a million seed in a pound. You can top seed on thin pasture in February or early March without covering. New seeding should be made on a firm well packed seed bed. Roll, if you can, before and after seeding. Two pounds per acre is plenty. In mixtures one half to one pound is ample. Even a quarter of a pound will provide over five seeds per square foot. We offer both the Certified and Field Inspected Non-Certified seed. The quality of the Field Inspected seed is equal to the certified. Certified seed will be offered in 10, 30, and 60 lb. bags.

The following prices are **POSTPAID:** Certified Ladino: 1 lb., \$1.50; 5 lbs., \$7.00; 10 lbs., \$13.50; Field Inspected Ladino: 1 lb., \$1.30; 5 lbs., \$6.00; 10 lbs., \$11.50.

Better Than Advertised—Prices Lower

Gentlemen: Saline, Mich.
I have purchased practically all of my grass seed from you for several years. They have always been better than you advertised and at a much reduced price.
Sincerely yours, Orson E. Tobias.

Quality Shows in Field Performance

Dear Sirs: Clifton Hill, Mo.
In every instance the shipments of seed I have received from you have been satisfactory in every way. Not only the quality but also the field performance of your seed has been the best.
Yours very truly, John H. Dickerson.

Please write us if you have mislaid our Pink Price List

Showing luxuriant growth of Ladino in an 80 acre field in southern Iowa in mid September after a hay crop had been taken earlier in summer.

BROME GRASS

★ HIGHLY PRODUCTIVE
★ EXCELLENT FEED
★ DROUGHT RESISTANT

One of the Most Valuable of All Grasses

There is a tremendous interest in Brome Grass throughout the north eastern quarter of the United States. From Kansas to the Dakotas, across the entire nation, Brome Grass is showing itself to be a very profitable crop. Practically every state experiment station has one or more bulletins or circulars telling about this great crop. They all praise its drought resistance which comes from its deep root system. Its palatability which it keeps even after plants are dry. Many give reports on the high feeding value and heavy production of Brome especially when grown with Alfalfa.

It is a Crop That Is Widely Adapted

The Illinois Station reports Brome is adapted in that state from north to south. It has given good results in Kentucky. Iowa, Nebraska, Indiana, Minnesota, Wisconsin, Michigan are great Brome states, and a lot is grown in Canada. We consider it adapted throughout the eastern U. S. and in farther western states.

As to soils, it prefers loam land although it has given good results on sandy soils if not too low in fertility. Well drained muck land will grow Brome if they get an application of some phosphate and potash. Brome is moderately resistant to Alkali. We do not recommend it for wet land but it will stand overflow that only stays on a few days. It will also stand a lot of silting and come up through quite a heavy deposit of silt if the Brome is well started at that time. You will find it a fine grass to use in terrace outlets and grassed waterways because it has a dense spreading root system.

Other Valuable Features of Brome

It starts growing early in the spring. It yields more than most any other grass. You can graze it heavily but if you have an excess of growth, just let it stand. It will retain its palatability and feeding value and your stock will eat it later. This grass is substantially higher in protein than Timothy. It outyields Blue Grass and Orchard Grass. Brome is chiefly used for pasture but it also makes good hay. You can combine the seed crop and still have the leaf growth by setting the combine high or by stripping the seed.

Since the seed is light, it is a good plan to sow it with a bushel and a half of oats or some cracked corn to keep the seed flowing through the spouts. The seed bed should be fine and firm. Do not cover the seed too deeply, a half to three quarters of an inch is plenty. Roll it if possible after seeding. Use 20 pounds of seed to

the acre. We consider a combination of Brome Grass with Alfalfa highly desirable. Brome uses a lot of nitrogen and Alfalfa helps keep up the nitrogen content of the soil. To pasture Brome, let it get a growth of at least five inches. Commercial fertilizers generally pay big returns on Brome Grass.

LINCOLN

The Leading Strain of Southern Brome:

There are three principal strains of southern Brome: Lincoln, Fisher and Achenbach. We do not know anyone who can tell any difference between them. These southern Bromes are taller growing and more vigorous for areas having climatic conditions similar to the southern two thirds of Iowa and on south of that. This Brome starts off faster and stands hotter weather than the northern or Canadian. These southern strains were developed in Nebraska and Kansas. They combine a high degree of winter hardiness, plus the ability to stand hotter, drier weather. This Lincoln Brome will produce better hay crops in the southern area and the grass is extremely palatable. Cattle really go for Brome Grass as a pasture and it also makes very good hay. For a pasture you can use up to around 40% Alfalfa, with Brome, safely without much danger of bloat. This is also true when you use commercial fertilizer. Since the Lincoln Brome is more competitive to Alfalfa up soil fertility faster and you may sow with it. It makes the application of fertilizers especially desirable where a stand is to be maintained for a considerable number of years. Brome Grass seeds are large and light. That is why we consider it especially important to sow only Gro-Coated Brand Brome Grass seed. It takes special machinery to get this job done, but we have solved the problem and can offer you very fine quality Lincoln Brome, all Gro-Coated at extremely reasonable prices. The crop of the southern seed is extremely short this year, so place your order early.

See Item No. 137 on price list for quotations on Gro-Coated Lincoln Brome

NORTHERN

Canadian No. 1 Brome

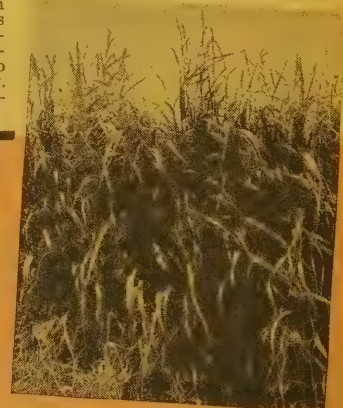

Supplies of northern Brome are quite large compared to Lincoln or southern. As we go to press the difference in price is about 17c a pound. That means around \$3.50 per acre less money to sow Canadian than southern. For many years Canadian Brome was practically the only Brome sown throughout the United States. It is still the best Brome for areas having conditions like the northern third of Iowa or north of that. Even farther south there are a number of farmers who prefer it. They like it because it is not as aggressive, therefore it does not crowd out the Alfalfa as fast when they sow a combination of Alfalfa with Brome.

This Canadian Brome will not deplete your soil fertility as fast. It has extremely high resistance to cold, as well as drought. This Canadian Brome is still extensively used in southern sections for the reasons mentioned. If you want to use Brome in combination with other grasses, we know it has its advantages because you can keep the combination that you want for a longer period.

The Canadian seed is of even finer quality this year than the southern. It is real heavy weight stock. This is the kind of seed that gives you extra assurance of satisfactory stands because it is both heavy quality and Gro-Coated Brand. There is no grass that we know of that is more nutritious or more palatable than Brome. Use it for hay and pasture. Combine it with Alfalfa or mix it with other grasses such as Orchard Grass and Fescue, especially in the southern area of adaptation. This Brome Grass can add to your farm profits very materially. See Item 136 on price list for quotation.

COMBINATION LOT IDEAL

Because of the scarcity of the Lincoln and the high price we have decided to offer a combination lot, consisting of approximately 50% Lincoln and 50% Canadian No. 1. In this way you get both the characteristics of the fast growing Lincoln and the less aggressive Canadian which should make an ideal combination to use with Alfalfa for pasture or meadow seeding. This carefully mixed and thoroughly blended seed comes to you ready to sow, all Gro-Coated. It is a splendid value that we know many of our customers will want. See Item 138 on the price list.

GRIMM NORTHERN Grown ALFALFA

WORLD BRAND GRIMM

OTHER NORTHERN GRIMM

Grimm Alfalfa continues in big demand. The plants have extra winter hardiness and somewhat finer characteristics of growth than common. If winter hardiness is a problem with you on your farm we believe you will find Grimm to be your best buy. If wilt is your principal trouble use the Ranger or Buffalo described on pages 22 and 23 of this book. Wilt, however, seldom becomes bothersome until the third year and that is why Grimm remains a great favorite.

In our World Brand Grimm you get the very finest of qualities, beautiful large, plump berries, high purity, strong germination. As fine a seed as you can buy. In the opposite column we offer the straight Montana Grimm. By the term Other Northern Grimm we mean Grimm produced in states like the Dakotas, Nebraska, Idaho, eastern Washington, etc. In our opinion seed from these areas in the Grimm variety should be hardy anywhere in this country. See Item No. 19 on our price list.

MONTANA GRIMM

We have quite a large number of customers who always want Montana Grimm if it is available. They consider it the hardiest and most satisfactory of any Grimm Alfalfa that they have ever sown. The Montana Grimm is not always available because much of the production is under dry-land conditions. This year, however, seed production was more plentiful and we were able to contract some beautiful seed at very attractive prices. This is the year to get started with Montana Grimm. The values have never been more attractive.

In our World Brand Montana Grimm you get unusually nice seed. It comes to you Gro-Coated, and that naturally puts a covering on the seed. This is true of course, of all of our seed. If you will take a little of it and rub in the palms of your hands it will remove that covering and then see how beautiful this seed really is. You get extra assurance of getting better stands because it's Gro-Coated. In our opinion there is no greater Alfalfa seed value in America today than our World Brand Montana Grimm. See Item No. 24.

Lot Bonafide GRIMM

A Fancy Grade of Recleaned Seed

This is a little lower priced grade than our World Brand but still a very splendid value. For years it has been the choice of many shrewd buyers. You do not get that extra fancy color but you do have honest to goodness quality that can produce splendid stands.

It is all northern grown seed. It is free of noxious weed seeds. It will average 98.50 purity, around 80% germination. You do not, however, have to sow this seed at a heavier rate just because the germination per hundred seeds is a little lower. You get more seeds in a pound. The berries are larger and the color better than the Lot Bed Rock offered in the opposite column. Lot Bonafide is what we term a Fancy quality. A very good number 2 grade at about \$5.00 a hundred lower price than World Brand as offered above. It gives you a great big extra measure of value. Its the results that our customers get from the seed that brings them back for more. Shipment guaranteed to show up to your entire satisfaction. See Item No. 18.

Lot Bed Rock GRIMM

Our Lowest Priced Grimm

This is a very serviceable lot of northern origin seed. It comes from the same areas producing our World Brand and Lot Bonafide northern Grimm. This lot contains smaller berries, and there are more off-colored seeds. The germination per hundred seeds is lower. However, there are many more seeds in a pound. You sow seed by weight or measure and not by count. A pound or quart of Bed-Rock will contain many more seeds than the World Brand. Therefore even though the germination per hundred seeds tests lower, pound for pound it shows up very favorably. In fact, we have had some tests where we got more sprouts per ounce from Bed Rock than from the higher priced grades. When you consider the fact that it's around \$12.00 per hundred or more lower in price, you can appreciate what a wonderful value it is. Fifteen pounds per acre would be an ample seeding. It has the same Gro-Coat protection as all of our Alfalfas and that really makes a great difference under many conditions. We have sold this kind of seed for years and many customers have told us they got better results from this than any other seed so you can depend upon getting your money's worth, and then some when you buy Lot Bed Rock Grimm. See Item No. 17.

Brome and Alfalfa Make Big Yields

Dear Sir: Burlington Wis.
I have always been very well satisfied with your seeds. This year I harvested 30 tons of alfalfa and Brome grass off of 7 acres. Your prompt service has been greatly appreciated.

Sincerely,
Merle L. Schrader.

Gentlemen:

For many years my Father purchased from your Company, all of the seed used on his farm. He was so well pleased with your service and the price that he recommended I continue buying from you after I took over the operation of the farm. I have found that your seed is as good or better than advertised in your catalog.

Very truly yours,
Stanley F. Scheering.

Hamilton, Ohio.

BEAUTIFUL NORTHERN

COSSACK ALFALFA

Cossack is noted for its winter hardiness. Many consider that it excels Grimm in stamina and vigor. The variety has been in this country for a long time. It was used in making the new wilt-resistant Ranger Alfalfa, that is described on page 23 of this book. Cossack makes a fine leafy growth and a beautiful quality of hay. It is very fine to use in combination with other grasses such as Brome or for a straight hay crop of Alfalfa. This seedling should be perfectly winter hardy for any part of the nation. It is in many respects very much like the Grimm Alfalfa. We have customers however, who prefer the Cossack over anything else.

WORLD BRAND QUALITY

We offer this northern grown Cossack only in the very top quality seed, World Brand extra fancy grade. No matter how much you may be willing to pay for your Cossack Alfalfa seed, we do not believe you can possibly get a better value. Further, there is no seed that could give you greater assurance of getting satisfactory results because it is Gro-Coated Brand. When you get Gro-Coat protection on the finest of quality you have something that will please the most exacting, discriminating buyer. See Item 20 on our price list for quotation.

Gentlemen:

Gro-Coated Alfalfa sure got off to a good start. Did better than any the neighbors had. They said they had never heard of "Gro-Coated" Grass seed. Keep up the good work. I will order more of it in the future. It made a better stand than the Non Gro-Coated seed.

Stitzer, Wisconsin.

Sincerely,
Frank Haser

Pages 2 & 3 for
Complete Story
of
"GRO-COATED"
BRAND SEEDS

LOT "MINN" SOUTHERN CANADIAN BLEND

This is a most unusual offering in Alfalfa seed. This kind of a combination has been released under a special ruling of the Department of Agriculture. A seedsman had mixed some Canadian seed with some southwestern seed. This is not permitted under Federal rules. However, after it was done and it was discovered, a special investigation was made to determine the character of the mixture. It was all seed of good quality and it was released for sale with the understanding that it be properly identified and described. In order to identify it, 10% of the seed had to be stained red.

Naturally this seed was offered at a very big discount in price. We believe that it has a lot of merit. The southern seed in it is famous for its quick growth and development. Even though there should be some winter killing, there is ample of the extra hardy Canadian to bring it through to a good stand. It should make a good seeding by itself and especially fine if you want to mix it with some other grasses or clovers. The Lot has a purity of 95% and a germination of 85%. We have given it the Gro-Coat protection so as to make sure we can give you extra assurance of producing a splendid stand. So long as it lasts Lot Minn will give you a lot of value for your money. See Item 9 on price list for quotations.

Gro-Coated Alfalfa Yields More

In one field I put half of it to Gro-Coated Alfalfa seed and the other half I just put Alfalfa that was not Gro-Coated. You could sure tell the difference. The hay from the Gro-Coated Alfalfa was about a ton to the acre more. I certainly recommend it.

George Van Nieuwenhze,
Palmyra, Michigan

HONEST JOHN

Lowest Priced, Hardy Origin Alfalfa— Contains No Southern Seed

Honest John Alfalfa has thousands of enthusiastic boosters among our customers. They will all be happy to know that Honest John now contains no southern seed but is of the same hardy origin that has given such wonderful satisfaction in the past. It isn't fancy looking seed but it sure can produce stands. We have customers tell us that they got better stands from Honest John than their neighbors did from seed costing almost twice as much. The secret of its success lies in the fact that it has smaller berries than the average lot. There are more seeds per pound. The germination per hundred seeds is lower, but the number of sprouts per pound generally is just as high, sometimes higher, than in the most expensive seed. We consider 15 pounds per acre a good seeding and one capable of producing good results. It is seed that has pleased thousands of farmers. Many call for it specifically by name because of what it has done for them in the past or what they have seen it do on other farms. We consider it adapted throughout the entire Corn Belt areas, through all areas excepting those requiring extra hardy Grimm, described on page 29. It's Gro-Coated of course. See Item 11 on price list for quotations.

RHIZOMA Alfalfa

An important new variety produced at the University of British Columbia, Canada. Spreads from underground roots. Has shown a high degree of cold resistance and was unaffected after being covered with an ice sheet for three weeks. Extremely resistant to heaving and appears to possess a considerable amount of drought resistance.

Seed supplies are very scarce. Rhizoma may be susceptible to bacterial wilt and its main area of adaptation appears to be in the northern states. Some plants have spread over an area of 25 sq. ft. from one single plant.

Postpaid price: 1 lb., \$3.60; 5 lbs., \$17.75; 10 lbs., \$35.00. See Item No. 7 for quantity prices.

LOT WESTERN

Lot Western is Alfalfa seed that has been produced in the southwestern part of the United States. It lacks winter hardiness under the average Corn-Belt conditions yet it is used rather widely for a green manure crop. Some of our customers report that they get a good hay yield off of it the first year. We have had reports where it has been maintained for several years. Where Sweet Clover weevil had caused that crop to be dropped in some areas the Lot Western would make a very fine seedling for soil building purposes. We carry this Lot Western in the World Brand quality. That means an extra fancy grade, as nice as you can possibly buy. See Item 4 on our price list for a real outstanding value in seed of this character.

Likes Berry's Seeds Best of All

Dear Sir:

I have been using your seed for a long time and have been well pleased with it. I will continue using Berry's Seed as I like it better than any I have ever used.

Yours truly, Leo Schaub,

Suttons Bay, Mich.

Cleanest and Least Expensive Seeds

Dear Sirs:

I find your seeds the cleanest and least expensive of any I have ever bought. We've had excellent results. I also like the promptness of shipment.

Sincerely, James E. McVoy.

La Fayette, New York

CORN BELT ALFALFA

How to Start Alfalfa

Alfalfa prefers a well drained sweet soil. If a test shows it to be acid we recommend liming as far in advance of seeding as possible. Seedings may be made either in the spring or in the fall. Prepare a good seed bed, but do not sow on a loose seed bed. It is best to have it fine on top, well settled underneath. Do not cover over half inch deep. If possible roll it. Rolling oftentimes makes the difference between success and failure in getting a stand. You could use a light nurse crop in the spring but avoid a heavy one. In using Gro-Coated Brand seed inoculate just prior to seeding. Sow 12 to 15 pounds per acre. Write us if you have any special questions about growing Alfalfa.

Fancy CORN BELT

Fancy Corn-Belt

In the opposite column under World Brand grade we give you a little fuller description of Corn-Belt Alfalfa. This is seed of central and northern origin. It is the common Alfalfa that we consider well adapted to the corn-belt.

This Fancy Grade is a splendid second top quality. It contains some off-colored seed but on the whole compares very favorably with what is frequently sold as the best quality. When you compare it with our World Brand you can see a slight difference. However, World Brand is the finest quality obtainable. You will like our Corn-Belt and you will like it Gro-Coated. You will also like our money-saving prices. See Item 12 on the price list.

WORLD BRAND CORN BELT

Whatever kind of seed you may buy from Berrys when you specify World Brand grade you get the best. There is nothing nicer to be had. We guarantee this quality to please the most critical and exacting buyer. You will receive seed that has beautiful golden color. Big, bold berries which have high germination. It is seed that is thoroughly re-cleaned and will test about 99.50% purity, 90% or better germination and free of noxious weeds.

In Corn-Belt Alfalfa we give you a combination of origins selected for hardness and a maximum production of fine quality seed. We consider it suitable for all the corn-belt excepting perhaps the northern portion where the Grimm might be more desirable. It is seed of central and northern origin. There is **no southern seed** used in Corn-Belt Alfalfa including Honest John. We like this type of Alfalfa because it recovers more quickly after cutting than some of the extreme northern origins. It generally produces a larger tonnage and sometimes an extra cutting per year.

This is a wonderful year in which to put in an increased acreage of Alfalfa because seed supplies are more plentiful, prices are lower. You will find Berry's prices make possible big savings to you on seed of the finest quality. Remember when you buy World Brand it's the best. See Item 14 on price list.

NOMAD ALFALFA

Certified Nomad Alfalfa

This alfalfa is also sometimes called the Creeping Alfalfa. Its origin traces to dry and northwestern areas. These plants were selected from a field where these plants have grown to fantastically large size. We do not recommend this Nomad for hay production and it will no doubt produce better results under dry land conditions. However, it has so many wonderful features such as high drought resistance and the ability to withstand heavy grazing. It spreads rapidly, and we believe that you may want to try at least a small amount of it. In Oregon, Nomad Alfalfa produced plants that measured 12 feet across from a single seed.

Postpaid Prices: 1 lb. \$4.00; 5 lbs. \$18.75; 10 lbs. \$35.00. See Item 8 on the price list.

SUPER VALU Combination Offer

Lot Super Value

Northwestern Alfalfa Containing Some Red Clover

This is probably as big a seed value as is available this year. It is a lot consisting of approximately 85% Washington grown Alfalfa and 15% Medium Red Clover. This seed was grown mixed, and couldn't be separated and had to be sold as a mixture, and therefore could be bought at a drastic discount. A good many farmers make a practice of mixing Alfalfa and Red Clover in their seedings. It gives splendid results. Therefore, if you feel that you can use such a lot, here's your chance to save \$3.00 to \$4.00 a bushel. Compared to average prices quoted elsewhere, the savings exceed that. The seed will show a total crop purity of 99% or better, 90% germination. It will be free of noxious weeds, bright color, strictly World Brand quality, except for the fact that it is Red Clover and Alfalfa mixed. It is far below the cost of what it would be if you would buy the seed separately and mix them. It truly is a Super Value lot and well worthy of this name. It is Gro-Coated Brand seed, of course. See Item 29 on price list for quotations.

Exactly as Represented

Dardanelle, Ark.

Dear Sirs:

With the experience I've had in buying seed, I cannot but give a good word for Berry's. Your seed is exactly as represented as to quality and price, and always gives full satisfaction.

Sincerely,

Arthur Cote.

Never Failed to Get a Good Stand

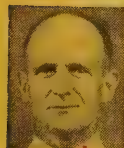

Bangor, Wisc.

Gentlemen:

Have ordered my seeds from you every year since I've been farming, and that has been 25 years ago. I think Berry seeds are the best for I have never failed to get a good stand.

Very truly yours,

William Haas.

How to Choose Crops to Fit Your Needs

On the previous page we give you two basic pasture seedings and explain how they may be changed to fit your own particular soil conditions. We know that you sometimes want something different. Therefore we are listing below various grasses and clovers that can be used for different purposes. You will find opposite each a figure showing the number of pounds per acre that we recommend sowing if you sow it without any mixing.

This will make it easy for you to figure how to make up any special mixture you want. For example, we suggest Brome alone 20 pounds per acre. Alfalfa 12 to 15. Red Clover 7 to 8. Then if you should decide you want a mixture half Brome and a fourth each of Red Clover and Alfalfa, you would get 10 pounds of Brome, 3 to 4 of Alfalfa and 2 of Red Clover.

We cannot prepare special mixtures for you. That would require special analysis tags and many small mixers. It is a simple matter for you to make mixtures after the seed comes to hand. Otherwise you can order the regular ready mixed seedings described in this catalog.

For Permanent Pastures

Brome Grass, 20 lbs. per acre; Fescue Alta-Ky. 31 or 144, 15-18; Timothy, 8-10; Orchard Grass, 20; Ky. Blue Grass, 18-20; White Dutch Clover, 2; Ladino Clover, 2; Alfalfa, 12-15; Birdsfoot Trefoil, 5-8; Alsike Clover, 4-6; Meadow Fescue, 15-18; Reed Canary Grass, 7-8; Meadow Foxtail, 12; Sericea Lespedeza, 12 lbs.

Permanent Meadows

Brome Grass, Southern or Canadian, 20 lbs.; Alfalfa, 12-15; Fescues, Alta, Ky. 31 or 144, 15-18; Timothy, 8-10; Orchard Grass, 20; Alsike Clover, 4-6; Ladino Clover, 2; Reed Canary Grass, 8; Meadow Foxtail, 12.

Grasses and Clovers for Different Kinds of Land

Wet Land

Reeds Canary, 8 lbs.; Fescues, Alta, Ky. 31 or 144, 15-18; Meadow Foxtail, 12; Red Top, 7-10; Ladino, 2-4; Alsike, 6.

Poor Land

Fescues, Alta, Ky. 31, 144, 15-18 lbs.; Birdsfoot Trefoil, 5-8; Sericea, 12; Sweet Clover, 15; Timothy, 8-10; Orchard Grass, 20; Korean Lespedeza, 12; Red Top, 7-10.

Short Rotation Pastures

Rye Grass Domestic or Perennial, 20 lbs. per acre; Timothy, 8-10; Red Clover, 7-8; Mammoth Clover, 7-8; Alsike Clover, 4-6; Red Top, 7-10; Orchard Grass, 20; Alfalfa, 12-15; Korean Lespedeza, 12; Meadow Fescue, 15-18. Oftentimes farmers prefer more clovers in short rotation pastures.

Short Rotation Meadow

Red clover, 8-10 lbs.; Mammoth Clover, 8-10; Southern Alfalfa, 12-15; Korean Lespedeza, 12; Timothy, 8-10; Alsike, 4-6; Meadow Fescue, 15-18; Domestic or Perennial Rye Grass, 20.

Annual Pastures

For this, quick growing crops are wanted. Some of them can be sown early. Sudan and Cane after corn planting time. Sudan, either Sweet or Common, 25; Hubam Clover, 12-15; Dwarf Essex Rape, 8; Oats, 3 bu.; Winter Rye, 1½ bu.; Wheat, 1½ bu.; Vetch, 15-20; Rye Grasses, 20; Cane, 40.

Annual Hay Crop

Sudan, Sweet or Common, 25 lbs.; Billion Dollar Grass, 25; Hubam, 12-15; Oats, 3 bu.; Millets, 25; Soybeans, 1½ bu.; Fields Peas, 1½ bu.

Well-Drained

Red Clovers, 6-8; Mammoth Clover, 6-8; Alfalfa, 12-15; Sweet Clovers, 12-15; Hubam, 12-15; Timothy, 8-10; Orchard Grass, 20; Brome, 20; Ladino, 2; Birdsfoot Trefoil, 5-8; Rye Grass, 20; Fescues, 15-18; Lespedeza, 12.

Average Fertility

Alfalfa, 12-15 lbs.; Red Clover, 6-8; Mammoth Clover, 6-8; Sweet Clovers, 12-15; Hubam, 12-15; Timothy, 8-10; Orchard, 20; Fescues, 15-18; Birdsfoot Trefoil, 5-8; Ladino, 2-4; Lespedeza, 12.

Dry Land

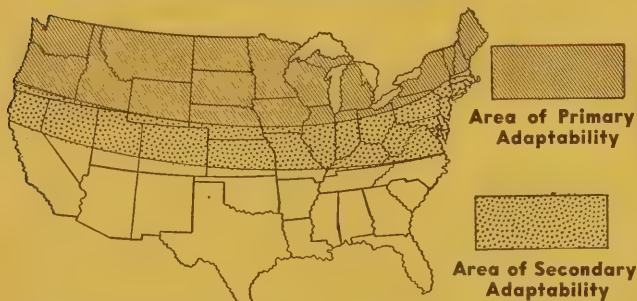

Crested Wheat, 10 lbs.; Alfalfas, 12-15; Trefoil, 5-8; Fescues, 15-18; Sericea, 12; Sweet Clover, 12-15; Brome, 20.

Rich Land

Brome, 20 lbs.; Timothy, 8-10; Orchard, 20; Red Clover, 6-8; Mammoth Clover, 6-8; Ladino, 2; Sweet Clover, 12-15; Alfalfas, 12-15; Fescues, 15-18; Rye Grass, 20; Birdsfoot Trefoil, 5-8.

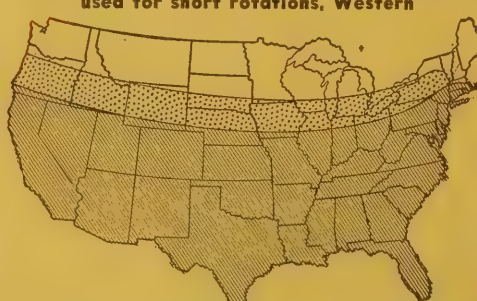

ALFALFA FOR DIFFERENT AREAS

Ranger, Grimm and Other Northern

The upper area is where the above mentioned Alfalfas do exceptionally well but they may also be grown farther south including the white area on the map.

Buffalo, Corn-Belt, Kansas, Okla. and when used for short rotations, Western

The Alfalfas mentioned above are well adapted up to the northern edge of primary area but can go farther north into the secondary area also.

Corn

Early—405-425.
Medium—615B-625.
Later—800-813, 825-C-92,
U.S. 13.
Good Land—425, 625, 813,
825, U.S. 13.
Thinner Soil—615B-405-800.

Oats

Early—Cherokee, Nemaha.
Medium—Andrew.
Later—Clinton Selections,

Crested Wheat Grass, 10-
12; Sorghums—Drilled, 50;
Double Rows, 15-20; Sin-
gle Rows, 8-12; Sweet Clo-
vers, 12-15; Alfalfa, 12-15;
Brome, 20; Rye, 1½ bu.

Emergency Crop

Buckwheat, 1 bu.; Mil-
lets, 25; Sudan Grass, 25;
Soybean, hay variety, 1½
bu.; Sorghums—Drilled, 1
bu.; Double Rows, 20-25;
Single Rows, 8-12; Spring
Wheat, 1½ bu.; Speltz, 1½
bu.

Seeds Satisfy—Saves Money

Dear Sirs:

I am perfectly satisfied with your seeds in every way. Also, your low prices saves me money.

Portland, Mich.

Yours truly,
C. W. Knoll

Consistent Values—Prompt Shipment

Dear Sirs:

I seeded 10 acres of oats this year with your Northern Grown Alfalfa seed. I never had a finer catch of alfalfa, and that is quite some satisfaction. I like your promptness in shipments and your consistent values.

Yours truly, Homer F. Kunkle

Homer City, Pa.

ORDERING IS EASY, SAFE ^{and} ECONOMICAL

GUARANTEE

We guarantee to save you money, considering quality. If upon receipt of your order you are not entirely satisfied you can return it and your money, plus transportation charges, will be promptly refunded. Or you can keep it 60 days and have the seed tested in order to satisfy yourself that the quality is good and that you have saved money and secured a big bargain. Then if you are not pleased you can return it, and have all money, including freight paid, refunded. You must be satisfied and we guarantee to save you money.

For garden seed guarantee see page 38—nursery stock page 55.

BERRY SEED CO., Clarinda, Iowa

★ CATALOG PRICES

Save our pink price list. By issuing a separate price list we can give the benefit of latest markets. Be sure to have the pink price list enclosed with this book. If it gets mislaid or out-dated, drop us a card and we will send you another copy at once.

We urge you to buy as early as you can from the price list that comes with the catalog. Because of market fluctuations prices are subject to change as indicated on the price list itself.

BANK REFERENCES

Our Company has a Capital surplus in excess of \$3,000,000.00. You can check our financial responsibility further through Commerce Trust Company at Kansas City, Mo.; Omaha National Bank, Omaha, Nebr.; First National Bank, Chicago, Ill.; Iowa Des Moines National Bank, Des Moines, Iowa; Bank of the Manhattan Company, New York, N. Y.; First National Bank, Lincoln, Nebr.; and the Drovers National Bank, Chicago, Ill., or any other bank or Commercial reference.

★ You Can Save Money at Berry's

We sell direct to farmers. Our prices are generally on a wholesale basis. You have a very wide selection of seeds in this book. When you buy seeds you want results in the field. Through our Gro-Coated Brand seed we give you greater assurance of getting that. All these things combined make it greatly to your interest to buy your seed requirements from Berrys. The savings are big and they are genuine.

★ Fast, Efficient Service

We are organized to give you better service than ever before. There is one special department whose duty it is to see that shipments go out with all possible dispatch. The American Field Seed of Chicago has now been consolidated with us all for the purpose of giving greater values. See the paragraph below relative to eastern shipments. We will try to take care of late buyers promptly but for your own interests mail order early. Try to avoid that last minute rush.

★ Is There Any Advantage in Ordering Early?

By ordering early you have a wider selection to choose from. You have better assurance of getting exactly what you want. You almost invariably get lower prices because we make our early prices the lowest. You are also assured of having the seed on hand in plenty of time for your spring seeding.

How to Order

By studying this Catalog you can get a very good idea as to what the crop may do for you. If you are in doubt write to our Service Department for expert advice. If possible, use our regular order blank when you order, if lost, any other paper will do. Give your full name and complete address, tell what station you want the seed shipped, and how you want it shipped. Freight or truck is most economical. Express or parcel post is quicker, but much more expensive. If you are in doubt how you want it shipped, you can leave it to our judgment. If your freight station is different from the post office, be sure to indicate it. If there is no agent at your freight station, we will prepay the freight and send you notice as to the amount due.

If you want the seed shipped by truck, try to give the name of your truck line and find out if they have a truck depot at

your station. Many truck lines serve small towns that have no depots. In such case you should give the name of some storekeeper or local dealer to whom the seed could be delivered. It will then be shipped to you in care of such place of business.

Sometimes some lots of seed become sold out and unless you mark your order "No Substitution" we will send the nearest thing to it, and either refund the difference in price, or bill you for the balance, or notify you as to the change in price.

Please send remittance with order. That gives you better service. Use postal or express money order, bank draft or personal check. Do not send stamps or coin, if convenient to remit otherwise. Please specify item number.

Eastern Shipments

In order to save our eastern customers money and to give good service to American Field Seed customers we have complete stocks for shipment from Marion, Ohio, and Streator, Illinois, warehouses. You will note from our pink price list that prices F.O.B. these points are slightly higher. However the saving in transportation and quicker service much more than offsets this small difference. If you live in the area shown on the map to the right it would be to your interest to remit Ohio or Illinois prices, otherwise remit Clarinda prices. Do not write to any other address but Clarinda. If you wish your order shipped from the eastern points, just state on your order, and remit the corresponding price. We will ship from the point that will give you the best service and the lowest cost.

Parcel Post Rates

Any order for seeds can be sent Parcel Post. Use the map above to find your zone and figure the rates below in remitting for any seeds ordered shipped by Parcel Post not quoted postpaid.

	1st lb., costs	All Additional pounds
Zone 1	17c	2 1/2c
Zone 2	17c	2 1/2c
Zone 3	17c	3c
Zone 4	19c	5c
Zone 5	21c	7c
Zone 6	23c	9c

These postal rates are in effect as this catalog goes to press. Should rates increase, we will bill you for any additional amount due. We can ship Express charges collect if preferred. Order early though, so we can ship freight which is cheapest, particularly on Seed Grains such as Oats that take a special rate. Above rates subject to any change in postal regulations.

12 MODERN RETAIL STORES

We have been able to establish retail stores at a few points as listed below. These stores carry most of the items that are listed in our catalog and there are many other items besides in allied lines that you will find in these stores, including, as a rule, a complete line of feeds. We find customers driving up to 150 miles to visit these stores. They like to discuss things with our Managers, to see the entire seed line. We cordially invite you to drive to your nearest store. Prices at these stores will be slightly higher as it costs a little more to establish this service. This is

customary among all mail order houses. However, if there is no store near you or it is not convenient to drive to one of them, be sure to order by mail. We can still give you the same superlative service and values that have made Berry Seed Company and American Field Seed Company such outstanding concerns in the nation for the past many years. We expect to continue to give you service along those lines for many years to come. Whether you visit us or write us you can be sure of getting satisfaction on all your seed purchases.

We have five Ohio stores: Marion, 420 North Main Street; Findlay, 212 South Main Street; Van Wert, West on Hiway #30; Greenville, 107-111 West Main; Washington C. H., C.C.C. Hiway, West City Limits. Five in Illinois: Streator, 904 East Kent Street; Kankakee, Route 54, North City Limits; Galesburg, 1153 Grand Avenue on Hiway 150 & 97; Danville, 2801 North Vermillion Street on Hiway #1; Chicago, 1929 West 43rd; and two in Iowa: Boone, East on Hiway #30, and Clarinda, 9th and Garfield.

Berry Store.

LESPEDEZA

THE CLOVER THAT GROWS ON
POOR LAND WITHOUT LIME

Early Korean for the central corn belt

Berry's Early Korean has been widely known as the Early Giant Korean. It is a great producer and becoming more and more a crop of vital importance. The more farmers see of it the more anxious they are to start growing it. That is especially true during the hot summer months when Blue Grass pastures are thin and dormant. It is under these conditions that Lespedeza makes its best growth. It stands a lot of heat. It enriches the land, and makes very fine feed that is high in protein. It is often a life saver to have a field of Berry's Early Korean to give you high quality feed when you really need it.

This Lespedeza is also known as Strain #19604. It will mature seed 100 to 150 miles north of ordinary Korean. We consider this adapted to climatic conditions similar to those prevailing in the central and southern part of Iowa as well as into northern Missouri. That takes a large area in Nebraska, Kansas, Illinois, Indiana, Ohio, etc. It may be grown north of this area but we are not certain that it will mature seed north of central Iowa. U.S.D.A. states it will be a reliable

seed producer to the northern limits of Illinois. Another important factor is that the seedlings make an early start and seem to grow more vigorously than ordinary Korean.

Big Profit Features

Growth up to two feet has been reported in some dry years. It will stand a lot of hot weather. Will respond favorably to moisture conditions. You can grow it on very poor soil without lime or fertilizer. On the better land it will grow taller and heavier. We have had customers report that it grows twice as tall as common Lespedeza. It produces up to 1000 pounds of seed per acre. An Iowa farmer used it by sowing it with Oats in the spring. After the oat crop was taken off, a hay crop of Lespedeza was harvested in August and in October a seed crop was taken. That is three crops off the land in one year. Write for our Circular telling you more about this great Lespedeza and other varieties. All our Lespedeza seed is Gro-Coated.

Small Lots Postpaid: 1 lb. 45c; 5 lbs. \$1.75; 10 lbs. \$3.25.

Showing leafy growth of Lespedeza

SERICEA THE PERENNIAL LESPEDEZA

Item No. 76 on Price List

Comes Up from the Roots
Each Year

This variety if started early in the spring develops a big root system. Excels Regular Korean as a soil builder. Has wintered over as far north as Vermont, New York and southern Michigan. It is adapted throughout the corn-belt and very well suited to southern states. Produces one main stem the first year, the second year it sends out 10 to 15 stems and the following years the growth gets still thicker and finer. It will grow to a height of two to four feet. Has a large carrying capacity as a pasture. Cattle will eat it readily after becoming accustomed to it. Do not sow as early as most clovers; April is good for Iowa. Sow around 12 pounds to the acre. Some sow a little earlier than April. Makes a wonderful crop. Our free circular on Lespedeza will also tell you more about this great perennial variety. There are many valuable characteristics in this crop. We urge you to grow some of it.

Small Lots Postpaid: 1 lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50.

Showing growth of Sericea

REGULAR KOREAN

Grows Most Anywhere. Wonderful Pasture and Soil Builder.

Korean Clover is an annual. It grows only one year from a seeding. It reseeds itself very readily, and matures seed even after plants have been killed by frost. Thus, it is proving itself adapted farther north than was first thought possible. It is steadily and surely working its way north into Iowa, Illinois, Ohio and Indiana. The Early Korean described above also helps to popularize the crop farther north. It is quite a common practice to put Oats on land where Lespedeza has reseeded itself. After the Oats are off the Lespedeza is there to give an abundance of pasture from mid-summer until frost.

Korean Clover shows its greatest value as a pasture. It will do best during the latter part of June, July and up to killing frost. It can be maintained in permanent pastures because it reseeds itself. You can sow it on winter grain or spring grain. After the grain is gone, the Lespedeza comes on to make its growth. While not tall, the stands are very leafy, and that is where most of the feeding value lies. The yields are surprisingly large from a stand that seems fairly short. The fact that it will grow on the poorest land without lime, and that it will resist more heat and drought than other clovers, makes it a very valuable crop.

Gro-Coated Brand Korean Clover Seed—A Wise Investment

Regular Grade Fancy Unhulled Item No. 70 on Price List. The supplies of Korean Lespedeza seed are much shorter than a year ago. You will probably find prices higher later in the season. Scarified Korean seed with hulls removed germinates quicker. Requires only 1/2 as much seed per acre. Item No. 72 on Price List. Note: Iowa customers should order scarified seed only, to comply with State Seed Law provisions.

INOCULATE ALL LEGUMES with NODULE GERM

For Better Stands and Bigger Crops Use Berry's Nodule Germ
Inoculation Is Necessary

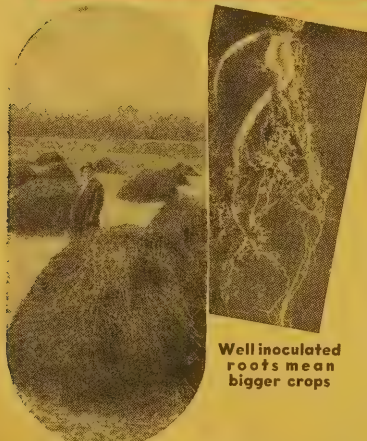

Legume crops which means all Clovers, Alfalfa, Vetches, Peas and Beans are soil building crops. However, they can build up soil only when they have the certain strains of bacteria working in the roots. Then and then only can these legumes take nitrogen from the air and use it for their own growth. If they do not have these bacteria they will actually rob the soil of nitrogen and leave it poorer instead of making it better. These crops use a lot of nitrogen. That is why mother nature has given them the power to take the nitrogen out of the air. You cannot be certain that you have the proper bacteria in your soil. Even though the crop may have grown on there well a few years ago does not mean that the bacteria are still there and alive. Chemical changes in the soil or other conditions may have killed them.

When you buy Berry's Nodule Germ you get a package containing millions of bacteria that are suited for the crop that you specify. Just put this on the seed. It is very simple to put on. We recommend applying it to GRO-COATED brand Legumes in dry form. You apply it just before seeding. Then when the seed germinates the bacteria are there, to penetrate the roots of the plants. Then it has the power to make its own nitrogen fertilizer out of the air.

We urge you to inoculate because the cost is small. We guarantee it to give you good results. If our nodule germ does not make nodules on the roots of your plants we will refund the price of the material. It is a wise investment. Inoculation may mean the difference between success and failure in getting a stand, or it may mean the difference between a vigorous growing stand and a poorly producing one. The cost is so small that no one should avoid or do without inoculation.

Berry's Nodule Germ Is a New Development

Alfalfa and Clovers	1 bu., 55c; 2 1/2 bu., \$1.10
Birdsfoot Trefoil	1/2 bu., 35c; 1 bu., 65c
Lespedeza or Vetch	100 lb. size, 55c
Soybeans	2 bu. size, 40c; 5 bu. size, 60c; 25 bu. size, \$2.70
Field and Garden Peas and Beans	1 bu., 30c

Well inoculated roots mean bigger crops

Most inoculants are prepared so that you have to buy different packages for different kinds of legumes. Now in Berry's Nodule germ we have inoculation that combines different bacteria so that one package will inoculate Red Clover, Alsike, Crimson, Ladino and Alfalfa. However, Lespedeza, Vetch, Soybeans, Trefoil, Fieldpeas and Cowpeas require special inoculation as per prices shown at right. Be sure to state the kind of inoculation that you want. All prices are ppd.

SWEET Clover

THE Great SOIL BUILDING Crop
RESTORES FERTILITY TO POOR LAND
Makes Good Land Better

Sweet Clover is an outstanding soil improving crop. It is unexcelled for putting nitrogen into the soil as well as other elements of plant food that are made available when the crop decays. A crop of sweet clover plowed under in the spring will increase corn yields as much as 20 bushel to the acre. There are some who will let the crop grow until it is in the full bloom stage. Somewhat higher fertility is returned in that way. When you follow that practice, however, it becomes too late to put the land to corn that year. If you plow it under early in the spring when it is six to eight inches high you can generally still put the land to corn and get wonderful results. We could give you results of many experiments on the fertility of sweet clover. Its effect on corn yields will illustrate what it can do for you. It has very strong tap roots that go down deep. The tap roots will break up heavy soils and permit better drainage. Sometimes they will break up hardpan. They decay quickly when plowed under. We do not recommend plowing the same year it is sown unless you use Hubam, described on page 37.

The first year Sweet Clover will afford pasture from the latter part of July until in October. In the spring you can get pasture from April to along in July with Yellow and from May until August with White. That is why a good many like to mix White and Yellow to prolong the pasture period. It is good for hog pasture if you keep it held down to a height of around 15 inches. It has a tremendous carrying capacity as a pasture.

All our Sweet Clover seed is Gro-Coated Brand. A customer in Nebraska reported plants from this seed grew so fast it got ahead of the Sweet Clover weevil, whereas other seedlings in his area were lost. We make no such claim, but this man was positive Gro-Coated Brand seed made the difference.

Inoculate All Sweet Clover Seed
1 bu. size only 55c; 2 1/2 bu. \$1.10

Grades and Varieties

We handle Sweet Clover in about the same grades as the other clovers namely Planet, Fancy and World Brand. These grades are described on page 33 and on these pages. That which we list in our catalog as Sweet Clover is the White Blossom, unless otherwise specified. Because of conditions in the principal seed producing sections, it may contain some Yellow. The Yellow Blossom lives two years and matures about ten days earlier than White. It is finer stemmed and somewhat leafier. Hubam, also known as the Seven Wonder Clover, an annual variety, makes its full growth in one year, see page 37.

We also call your special attention to the combination seeding of Sweet Clover and Mammoth Red described below. It's a great value.

CRIMSON CLOVER

This Clover is most extensively used in the south. There it is sown in the fall and acts as a winter annual like wheat. It prefers a cool growing season. When sown in the north it should be sown in the spring. In the north the growth depends a good deal upon seasonal conditions. The blossoms are longer and brighter than Red Clover. The normal height is 2 to 2 1/2 ft. It roots deeply. Grows on poorer soils than Red Clover. A good crop plowed under is equal to many pounds of manure. Sow 15 pounds to the acre. In small lots, 1 lb., 50c; 5 lbs., \$2.00; 10 lbs., \$3.75, postpaid. See item No. 60 on price list.

Sweet Clover seed is more plentiful than last year and considerably lower in price. You can afford to sow it more liberally. Do not however delay buying. We expect markets to advance and some lots will be sold out.

WORLD Brand YELLOW

Our Very Finest Quality

This biennial or two year yellow blooming sweet clover is liked by many for the reason that it is finer stemmed, and that it does not grow quite as tall. It also seems to tolerate more adverse conditions such as drought and closer grazing or cutting. It will make about as large a growth the first year as the white, 12 to 24 inches, depending upon soil and seasonal conditions. The second year it may not produce quite as much because it matures somewhat earlier. This is oftentimes the feature which is greatly desired. It is also quite a common practice to mix white and yellow, so as to lengthen the pasture season, and also to lengthen the bloom season in event you want to use it for bee pasture purposes. If you demand the very best in quality you will find it in our World Brand grade. The seed is thoroughly scarified, and the shipment is absolutely guaranteed to please you. Write for special quantity or delivered prices.

ITEM
No. 86
ON
PRICE LIST

Sweet Clover Is Cheap This Year. Sow Plenty of It

FANCY Brand YELLOW

This Fancy Grade runs our World Brand quite a close second. We can sell it at quite a bit more attractive figure, because it contains a few off colored seeds, but aside from that you will find it a very dependable, satisfactory seedling. You can make an extra saving in buying this lot.

The fact that Sweet Clover is largely used for pasture purposes, makes Yellow very desirable especially where you want as much pasture as you can get the first year. It does not seem to winter kill as easily even if it is pastured relatively close, or if cut back fairly far for hay crop the first year. If you can let it go into the winter with a top growth of around 5 inches, that should be sufficient. That will not reduce the production next year as much as if the white were cut or pastured that close. From a soil building standpoint we consider that it is very similar to the white. In fact, we think it starts off a little faster in the second year. Some customers say they think it is easier to get a stand of yellow and that it will do well under less favorable conditions. Sow White or Yellow, use around 12 to 15 pounds to the acre. 1 lb. of any Sweet Clover Postpaid, 40c; 5 lbs., \$1.65 and 10 lbs., \$2.75.

Descriptions Reliable—Quality High

Dear Sir: Rochester, N. Y.
 I have been using your seeds for many years and have had very satisfactory results. Your catalog descriptions are very reliable, as I have always received high quality seeds at a reasonable price.

Sincerely yours,
 Dominick Branchi.

Good Results—Fine Stands

Gentlemen: Lester Prairie, Minn.
 We have been buying seed from you for several years and have always had very good results. Some of the seed we sowed this spring gave us the best stand we ever had.

Yours truly,
 John C. Pokornski.

Sweet Clover PRODUCES Enormous Crops

A Great Clover for Pasture

Sweet Clover has an unusually heavy carrying capacity as a pasture. It will take care of more stock per acre than any other clover. You can get this pasture the same year that you sow it. Sweet Clover when sown on winter wheat or with spring grain will grow quite fast after the grain crop has been removed. Generally you can begin pasturing it about the middle of July. You can put quite a lot of stock on it. Let the crop go into the winter with pretty good top growth. That will give the plants added strength and enable them to come through the winter in better shape. In the second year it starts growing early and grows until about mid-summer. Some make a practice of sowing sweet clover two years in succession on the same land. Thus when the second year clover is finishing its growth the new seeding is coming along to provide pasture for the balance of the season. You can maintain a pasture this way for several years.

Generally Makes Hay the First Year

While the sweet clover is used principally for soil improvement and for pasture it also will make good hay, especially the first year. It should be cut early enough in the fall so that the growth can come on to make good production before winter sets in or cut it with a fairly high stubble. The feeding value of sweet clover hay, especially the first year's crop, is very good. It should be well cured so that it does not become moldy. If you wish hay in the second year be sure to cut it with a high stubble. The second crop from sweet clover, in the second year of its growth, comes up from the stubble and not from a crown like alfalfa. If you cut sweet clover close to the ground in the second year of its growth you will generally kill it out. If it is cut for hay in the second year, cut it about the time the bloom buds begin to show up.

Berry's Prices Save You Money on All Grades

Berry's Sweet Clover prices are for GRO-COATED brand seed. See pages 2 & 3 and pink price list

LOT DO-MORE SWEET CLOVER

A Very Special Favorite of Thousands

This Lot stretches your money over more acres than any other lot. It is our lowest priced grade, it has the quality that has been giving our customers satisfactory results. Naturally it isn't the finest for looks but the favorable reports that we get on this indicate its real value. After all, it is results that you are after when you make a seeding. Lot Do More has been scarified, it has been re-cleaned and tested. The crop from this grade is the same kind as secured by many of the higher priced grades. You do not have to sow this at any heavier rate than the other grades.

This Grade is in Big Demand

Every year we sell large quantities of Lot Do More. This year the quality is improved. As mentioned above, it is not the finest looking seed, it is somewhat off-colored. The germination per 100 seeds is lower than in the larger berried grade. The berries in "Do-More" are smaller. That is why it gives such good results. The larger number of seeds per pound generally offsets the lower tests per 100 seeds. You sow by weight and measure and not by counting out so many seeds per acre. It is the number of sprouts per pound that counts. The lower priced seed therefore may give you as many sprouts per ounce or per pound as the higher priced grade even though the sprouts per 100 seeds are less. Our prices on GRO-COATED brand seed are very low this year.

LOT WONDERFUL

An Extra Value in Fancy Seed

This is a beautiful lot of Fancy White Sweet Clover. It comes quite close to our World Brand in appearance and all around quality. The size of the berry, the color of the seed, the germination, and purity are all good. It is as nice a quality as some dealers sell as their very best. You will find it thoroughly dependable. Like the Do-More it is the White Sweet Clover. This lot has a little mottled yellow in it. That is apt to be true of most any of the White Sweet Clovers.

This is an Especially Low Price

Supplies of Sweet Clover this year are somewhat more plentiful than a year ago, but stocks are not large. Prices are materially lower and you can afford to sow it much more liberally. For all practical purposes this lot will do everything that the World Brand will do, and you can buy at a saving of \$2.00 per hundred. We will gladly send you a sample so that you can see how much you get for your money in this great value. You can order it with the assurance that you will be perfectly satisfied with the seed when you get it. If for any reason it fails to please you, you can return it and your money including transportation charges will be refunded. Lot Wonderful is indeed a wonderful value.

Be Sure to Inoculate all Sweet Clover. See Page 34

SPECIAL "MIXED" SWEET CLOVER

This special mixture is similar to the Lot Premium Sweet Clover described on page 37. We were able to purchase one lot of this mixed seed at quite a little discount because the color wasn't quite as nice as in Lot Premium. Insofar as results are concerned, it can give you equally good performance. It is larger berried seeds than the Lot Do More described above and it gives you a very dependable seeding at a very reasonable cost. It is about a choice or Planet Brand quality. A combination of White and Yellow Sweet Clover is a very common one from the standpoint of practical value. You will get your money's worth and then some in this special mix. For pasture it gives you longer periods for in the second year the Yellow generally starts a little quicker while the White matures later. In plowing under for soil building purposes, the mixture is just as satisfactory as either straight White or Yellow.

See Item 84 on Price List

Sweet Clover Grows Fast

I sowed Gro-Coated Red and Sweet Clover this year. While the Wheat was not too heavy, the Red Clover was healthy and grew vigorously. In one field this spring, I plowed it up and sowed Gro-Coated Sweet Clover alone, putting 12 pounds to the acre. Have a wonderful stand now in September; it is 5 feet tall. The plant certainly grows vigorously.

E. G. Powell, Findlay, Ohio

Withstands Dry Weather Better

I sowed Sweet Clover, some mixed seed and Korean Lespedeza, all Gro-Coated. Used less seed than normal and got good stands. I think the crops from treated seed stand the dry weather much better.

E. N. Frueh,
Dallas, Iowa

Many Years of Fair Dealing and Saving

Gentlemen: Sheridan, Ind.
For the past 25 or 30 years, I have been sending you my orders for seed. I have been well pleased with the seed and your fair dealings. If I could not have saved money, I would have bought seed here.
Very truly yours, G. B. Harris.

Gro-Coated Alfalfa Grows Fast

Gro-Coated Alfalfa was sown with the Barley and it grew nearly as fast as the Grain. The Barley made a heavy stand. It ran 61 bu. to the acre, yet the Alfalfa was as fine a stand as could be. Since threshing, 40 head of cattle are running on it and it's still growing. I think Gro-Coated is a wonderful help in getting stands and should be expanded to all grasses.

Willard Dittrich,
Alma, Wisconsin

Gro-Coated Seed Made the Best Stand

I sowed some Gro-Coated Sweet Clover last year, using 8 pounds to the acre. That is less than I normally sow. On account of soil conditions being different in the field there was some difference in performance. There is not much stand where the seed was not Gro-coated.

Theo. A. Coufal,
Bruno, Nebr.

Prompt Service—Satisfactory Quality

Dear Sir: Hamilton, Ohio
I have used Berry's Seeds for the past 6 years and they have been very satisfactory in quality and seeding cost. My orders have always been given prompt attention. You can depend on an order from me each year.
Respectfully, Elwood Stock.

World Brand WHITE SWEET CLOVER

This is the cream of the crop from a quality standpoint and also varietal purity. Our World Brand quality means only the very highest standards of purity, germination, color, size of berry, etc.

In order to get enough seed that would come up to our World Brand quality requirements Berry's have bought Sweet Clover from Oklahoma all the way up into Canada and from Ohio, west into Montana. Berry's were pioneers in introducing this crop to American Agriculture, and are today probably the World's largest handlers of it. Come to seed headquarters when you want the best of anything at a price to save you money.

What do we mean by varietal purity? Most Sweet Clover today is mixed to some extent, that is, the White will contain some Yellow. In our World Brand, Berry's choose the finest seed that grows, although it isn't 100% White, and will contain a trace of Yellow.

Our supplies of this very finest seed may be gone before the season is over. We can't replace them at any price when that happens so order early. The early buyer always gets the best of service and quality at lowest prices.

(Be sure to write us if our Pink Price List is mislaid)

LOT PREMIUM SWEET CLOVER

A Very Fine Quality at a Very Low Price

ITEM
No. 87
ON
PRICE LIST

If you were to ask us to pick out the one best value in Sweet Clover in this book, we believe we would have to select this Lot Premium. It meets our customers demands for high quality at a price that means real savings on your seed bill. Lot Premium is principally White Blossom but contains a little more Yellow than the other regular grades of White. This gives you earlier pasture than you will get from the White alone, and it lasts over a longer period. The Yellow and White are equally good for soil building purposes. From the standpoint of performance therefore, this Lot Premium will give you the same practical results that you can get from any of the other offers.

This is seed of high purity, it is hulled and scarified for quick germination. It has a good color and a nice sized berry. The reason it is cheap is because it contains little more Yellow than the average and we thus could buy it at a discount. This discount we are passing on to you in the very low price we have on it this year. Some of our lots are lower priced, some are higher priced. You get a maximum of all around sound quality in this Lot Premium. Remember it is all Gro-Coated. That makes it worth a great deal more.

Whatever grade of Sweet Clover you may select, we do urge that you order it early and assure yourself of the selection that pleases you most. Also be sure to inoculate your seed. Order 2 1/2 bushel size unit for greatest economy. It will treat up to three bushel.

Price on Inoculation—1 bu., 50c; 2 1/2 bu. size, \$1.00.

Very Satisfactory Results from Berry Seeds

Dear Sirs: Northampton, Pa.
The seed which I have been buying from you for quite some time has given very satisfactory results. The stands have been very good.

Yours truly, Lester R. Becker.

HUBAM ANNUAL WHITE SWEET CLOVER

7 GREAT FEATURES

World Brand EXTRA FANCY

Sometimes called "7 Wonder" Sweet Clover A GREAT MONEY MAKER—DEMAND INCREASING

More farmers each year are learning about the merits of this great crop. This sensation of the Sweet Clover family, being an annual, does two years work in one. With shorter rotations being practiced with the need for continued all out grain production, and maintenance of high soil fertility, Hubam fills today's farming practices better than ever before.

Sow Hubam with a nurse crop. It is one of our greatest pasture crops and also can be used for hay. It is easy to get a stand and will make a seed crop the first year, yielding up to 10 bushels per acre. Hubam is adapted to any soil that will raise Sweet Clover. It can be pastured until frost, being very drought resistant. For hay it yields up to 4 tons per acre, with a protein content of 20 to 25% on a dry basis.

As a soil builder Hubam is nearly equal to Sweet Clover. It won't come up the following spring when plowed under in the fall.

Seven Points of Superiority

1. Makes its full growth the same year it is sown. Cash in on hay, pasture and seed.
2. High in protein 20 to 25%. Fine feed, excellent for dehydrating and grinding for stock feed.
3. Wonderfully fine for fertilizing. Stores an abundance of nitrogen in the soil. A legume of exceptional possibility.
4. An excellent pasture crop. Produces big yields of hay, rich in feed value.
5. A good heavy producer. Blooms abundantly. It also is a fine drought resister.
6. A profitable cash crop when saved for seed. Yields up to 10 bushels per acre.
7. Helps control root rot by giving you a quicker rotation. Keeps soil healthier.

Seeding Suggestions

Inoculate your seed with Berry's Nodule Germ. See page 34. Sow on winter grain when ground can be harrowed lightly. Sow 15 lbs. per acre. Harrow lightly or roll after seeding. Rolling is best. Sow with spring grain in a similar way. Cover seed lightly with a harrow and roll.

Supplies Limited—Buy Early

Hubam is in terrific demand due to its wonderful performance. Supplies are good today but demand is heavy and markets strong. Hubam is adapted to every state in the Union. Try it this year. The results will please you. Berry's price is guaranteed to save you money. If you want the best, order our famous World Brand quality, now Gro-coated. This is bright, plump, scarified seed of most vigorous germination and highest purity. It will satisfy the most critical buyer. Sample mailed on request. For a fine value in slightly lower germination order our Choice or Planet Brand Hubam Gro-Coated as described below.

Small lots Postpaid. 1 lb., 40c; 5 lbs., \$1.65; 10 lbs., \$2.95.

CHOICE HUBAM SERVICEABLE QUALITY

ITEM
No. 88
ON
PRICE LIST

We were able to secure a lot of Hubam Clover at a real sacrifice price. The seed has a nice sized berry and it has high purity. The germination is somewhat below normal, so that it should be sown at a little heavier rate. A normal seeding in most sections is 12 to 15 pounds per acre. We suggest sowing 15 pounds of this Choice Grade lot and have priced it accordingly. By having the Gro-Coat protection you have extra assurance of getting the best possible results from this seed. With Hubam in short supply this year, this is a real bargain.

Prompt Courteous Service Is Satisfactory

Dear Sirs: Lancaster, N. Y.
I have always been very satisfied with the seed I bought from your company. I also like your prompt and courteous service.

Yours very truly, Dawn A. Brunck.

KILL INSECTS

FOR CATTLE & DAIRY BARN

DuPont Dairy Barn Insecticide

Gives both quick-kill and long residual control of house flies and stable flies. Long effectiveness—as much as 6 to 8 weeks after application—means fewer sprays and lower cost. Dairy Barn Insecticide contains basic chemicals APPROVED by the USDA for use on dairy barns and premises. It is a wettable powder easy to mix with water for convenient spraying. One lb. will make 3 gals. of spray or enough to spray 1,500 sq. ft. of barn surface. 1 lb., \$1.60; 4 lbs., \$5.40, postpaid. Order No. D-1953.

DuPont Dairy Cattle Spray

Gives long-lasting and economical control of horn flies, stable flies and house flies, as well as lice and mosquitoes. Contains the only APPROVED long-lasting fly killer recommended by the USDA for use on dairy cows. It is a convenient wettable powder that is easy to mix with water in the proper strength for spraying animals. 1 lb. makes 12 gal. spray. 4 oz. can, 45c; 1 lb. can, \$1.25; 2 lb. can, \$2.20, postpaid. Order No. D-1952.

DuPont 50% Tech. Methoxychlor

A wettable powder that can be safely used on animals, in barns, and on the tenderest plants. Very effective killer of all types of insects. When used in the garden, it can be sprayed right up to harvest time because of its low order of toxicity to humans. Kills bean beetle, Potato beetle, flea beetle, Japanese beetle, cabbage worm and many others. 8 oz. container, 75c, postpaid. Order No. D-1515.

FOR ORCHARD & SHADE TREES

TREE TANGLEFOOT

A very sticky compound for banding fruit trees, shade trees and grapevines to prevent destructive climbing insects from reaching the upper parts and destroying buds, foliage, etc. A single application lasts for months. 1 lb. can, \$1.50, postpaid. Order No. M-3128.

FRUIT TREE SPRAY

Recommended for control of many insects and fungous diseases affecting apples, peaches, cherries, pears, plums, quince, strawberries, currants, gooseberries. Specially formulated for spray application. A wettable powder—one pound makes 13 gallons of spray. Spray schedules on the label. 1 lb. canisters, \$1.15; 3 lb. bags, \$2.75, postpaid. Order No.

ACME STOP

A gummy, sticky oil mass for banding trees, vines, shrubs, posts, to trap all climbing insects—ants, caterpillars, cankerworms, walnut worms, etc. Won't run. Remains sticky for months. One lb. will make 20 feet of 2" wide bands or 70 bands 2" wide on 1" diameter vines. 1 lb. can, \$1.05; 7 1/2 lb., \$6.25, postpaid. Order No. A-1656.

INSECT KILLERS FOR THE GARDEN & LAWN

ACME GARDEN GUARD

The favorite garden dust of America because of its uniform high quality and effectiveness against such a wide range of farm and garden insects. Especially good on beans, broccoli, cabbage, cauliflower and currants. A safe insecticide, non-injurious to humans or pets. Controls many insects which DDT does not affect. For dusting—apply direct from can. For spraying—6-8 tablespoons per gallon of water. 1 lb. covers 200-300 row feet. Very effective as a dust for dogs, cats, birds and poultry to control fleas and lice. 1 lb. can 50c. No. A-1650, 8 oz. Bug Blaster Gun 69c, postpaid. Order No. A-1651.

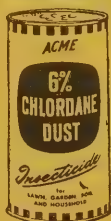

ACME TOMATO DUST

A specific insecticide and fungicide for better tomato protection. Controls both early and late blight as well as hornworm, fruit worm and flea beetle. Especially designed to avoid injury caused by ordinary bordeaux mixes.

1 lb. will cover with one application 75 to 120 plants.
1 lb. can, 60c; 4 lb. bag, \$1.50, postpaid. Order No. A-1652.

45% CHLORDANE EMULSION

Kills a wide variety of insects infesting garden crops (flower and vegetable) such as ants, grasshoppers, lygus bugs, alfalfa weevil, cabbage worms, cutworms, and many others. Also kills many household pests: roaches, flies, mosquitoes, silverfish, etc. Use 1 teaspoon to 1 quart water. 1 oz., 39c; 4 oz., 75c, postpaid. Order No. S-1320.

LINDANE SPRAY

Quick, positive insect control effective three ways... when eaten—by contact—by fumigating action. Especially useful for protecting foliage and flowers of all kinds both indoors and out. Also useful in control of hard-to-kill bugs in early season spraying of fruits and vegetables. Has uses in control of turf and soil insects. 4 oz. bottle makes 6 gallons effective spray. 4 oz., 80c; pint, \$2.70, postpaid. Order No. A-1654.

RED ARROW GARDEN SPRAY

A scientifically prepared insecticide and is the only insecticide most home gardeners need. The active killing ingredients, Pyrethrum and Rotenone, are combined with a special soap which gives the spray easy spreading and lasting sticking properties, when mixed with water. Kills practically all insects and is entirely harmless. 1 oz., 35c; 4 oz., \$1.00, postpaid. Order No. M-2135.

ACME 6% CHLORDANE DUST

Chlordane is powerful and effective in controlling insects 3 ways—by contact, when eaten or by inhalation of its vapors. In gardens—for cutworms, sowbugs, millipedes, snails, and leaf cutting ants. In soil—for wireworms, white grubs and root maggot. On lawns—for ants, chinch bugs, chiggers, grubs and sod webworms. In the house—for ants, cockroaches, carpet beetles, silverfish, crickets and fleas. Use as dust as it comes in the package. 1 lb. 60c, postpaid. Order No. A-1656.

VEGETABLE GARDEN DUST

For the control of insects and diseases on practically every vegetable commonly grown in the back yard. May be used with complete safety. Effective against aphids, beetles, cabbage worms, and both corn and squash borers; also mildews and blights. Apply as dust or as spray using 3 ozs. per gallon of water. 8 oz. guns, 79c; 1 lb. canisters, \$1.15, postpaid. Order No. D-1517.

Order No. D-1517.

ACME ALL ROUND SPRAY

For roses, azaleas, other flowers, shrubs, vegetables and fruit trees. A complete, modern carefully formulated multi-purpose product designed to provide with one application the best available protection against both insects and fungi. For spraying—1 lb. to 12 gallons water. For dusting—use direct from can in light application. 1 lb., \$1.10; 4 lbs., \$3.50, postpaid. Order No. A-1658.

PLANT FOOD-GROWTH STIMULANTS & OTHER AIDS

ROSETONE

"Peps-Up" New Roses

Gives your new dormant Rose bushes a successful start. The essential new feeder roots develop faster to nourish the new growth. Establish Roses also benefit from being watered with Rosetone. A teaspoonful in a gallon of water is enough for several plants. $\frac{1}{2}$ oz. pkg., 25c; 3 oz. pkg., \$1.00, postpaid. Order No. ACP-15.

FRUITONE

Hormone spray for preventing preharvest drop of apples. Holds apples on the tree longer. Fruitone sprayed on flowers produce better set of seed and fruit, such as tomatoes, and beans. $\frac{1}{2}$ oz. pkg., 25c; 2 oz. can, \$1.00, makes 25 gals. of spray. Postpaid. Order No. ACP-16.

"BERRY SET"

For bigger, better fruits use Berry-Set. Just mix the powder with water and spray the open blossoms. (Not necessary to confine spray to blossoms only. Perfectly safe to spray the whole plant.) The 50c package makes 4 gallons of spray solution, enough for several hundred plants. We recommend Berry-Set also for Blackberries and Raspberries. 1 oz. pkg., 50c, postpaid. Order No. M-6135.

PLANT PLATE

End spraying work and worry. New, tested Plant Plate "The Spray That Stays" kills insects, prevents fungus diseases and feeds plant through the leaves. Will not burn, seal or injure plant.

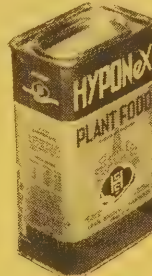

IT'S WEATHERPROOF—stays on for weeks. Kills aphids, red spider, caterpillars, worms, leaf rollers, thrips, beetles, mites, webworms. Controls mildew, black spot, blight, rot, leaf spots—AND it's a foliar fertilizer, in addition. Easy to use—economical (one application lasts for weeks). 3 oz., \$1.50; 6 oz., \$2.25, postpaid. Order No. M-7237.

TRANSPLANTONE

For Successful Transplanting

Reduces shock and wilt when plants are moved. Promotes growth of new roots to feed and sustain plants through period of adjustment to new location. Apply in solution when setting out vegetable plants, annuals, perennials, shrubs. $\frac{1}{2}$ oz. to 5 gallons water. $\frac{1}{2}$ oz. pkg., 25c; 3 oz. pkg., \$1.00, postpaid. Order No. ACP-17.

HYPONEX Plant Food

Simply dissolve and water all your houseplants, garden flowers, vegetables, shrubs, lawn. Produces more and larger flowers and fruit. Excellent for seedlings, cuttings, transplants. Clean, odorless. Won't burn foliage or roots if used as directed. Contains all nutritional elements—plus vitamin B₁. Feeds instantly. 1 oz. pkt., 10c; 3 oz. can, 25c; 7 oz. can, 50c, postpaid. Order No. M-8338.

ROOTONE

Makes Plant Cuttings Root Better and Faster

A hormone powder for treating plant cuttings to stimulate the formation of roots. When treated, more rapid rooting takes place, heavier root systems are formed, and a higher percentage of cuttings are successful. The expense is slight and the process simple. $\frac{1}{4}$ oz. treats 400 cuttings. $\frac{1}{4}$ oz., 25c; 2 oz., \$1.00, postpaid. Order No. ACP-18.

DORMATONE HORMONE SPROUT INHIBITOR

Prevents Potatoes Sprouting in Storage

Now you can store your home-grown potatoes 12 months without cold storage. Dormatone prevents sprouting and shrinking, actually improves cooking and eating quality, and appearance. Use also on carrots, turnips, rutabagas. Absolutely harmless. Just dust tubers. 12 oz. in Sifter Can. (treats 8 bu.) for \$1.00, postpaid. Order No. ACP-19.

KILL CRABGRASS

"WEEDONE" PC Crabgrass Killer

Also kills chickweed, and without harm to clover, desirable grasses, or soil. Nonpoisonous; contains potassium cyanate (not deadly potassium cyanide). 6 $\frac{1}{2}$ oz. can treats 1000 sq. ft.; 6 $\frac{1}{2}$ oz. can, 98c; 26 oz. can, \$2.97, postpaid. Order No. ACP-20.

DuPont Crabgrass Killer

Kills crabgrass and chickweed at any stage of growth. Easy to use as a spray; non-toxic, non-corrosive. Recommended by lawn care specialists. 7 $\frac{1}{2}$ oz. bottle (treats 750-1500 sq. ft.) \$1.00; 30 oz. size (treats up to 6,000 sq. ft.) \$2.95. Postpaid. Order No. D-1525.

The AIROSPRAYER is an efficient, economical, all-purpose sprayer for farm, lawn and home. It will spray thin liquids or heavy emulsions such as whitewash and arsenate of lead. Use any kind of container such as a tin bucket. Sprays very fine mist to a steady stream 30-35 feet. Pressure up to 100 lbs., \$7.45, postpaid. Order No. M-1010.

CYCLONE SEED SOWER

Well known substantial hand seeder. Turning crank revolves distributing wheel that scatters seed in equal amount at equal distances from operator. Sows clovers, Timothy, Alfalfa, Oats, Sudan, Wheat, etc. A favorite among farmers everywhere. Sturdily built. \$3.95 each, postpaid.

HORN SEED SOWER

Simplest of all seeds. Sows all smooth seeds like Clovers, Timothy, Alfalfa, Lespedeza, etc. Seed flows from sack through a tube that you swing to and fro. Has gauge to regulate amount of seed to sow per acre. One of the most economical seed sowers that you can buy. \$1.65 each, postpaid.

SEYMOUR "SEEDKASTER"

Favorite among thousands of farmers. Constructed of lightweight, rust proof, Zincgrip steel with exception of canvas bag which holds 18 quarts. Gears are sealed in dust proof chamber and are permanently lubricated. 10 to 1 Gear ratio provides wide, uniform distribution of seed. Broadcasts all types of clovers and grasses. Complete instructions furnished with each Seedkaster. \$5.95 each, postpaid.

KRILIUM Soil Conditioner

Krilium is the original chemically-made "resin," developed by Monsanto, which acts on soil like the natural gums produced by composts and manures.

Merloam is a special formulation of Krilium developed for home gardeners. It contains additional ingredients which keep the Krilium dry and free-flowing and make it easier to mix in the right amount of conditioner on a given area of soil. 1 lb., \$1.69; 5 lbs., \$6.95, postpaid. Order No. M-9439.

PROTECTION FOR FLOWERS KILL RED SPIDER

DuPONT FLORAL DUST

For flowering plants, roses and fruit trees. Controls most harmful insects, and plant diseases, too, making use of such new, scientific developments as methoxychlor and ferbam. Especially effective against aphids, Japanese beetles and rose chafers; also for control of rusts, mildews, and blights. Apply as a dust, or spray, using 2½ oz. per gallon water. 8 oz. duster gun 79c; 1 lb. canister \$1.15. Postpaid. Order No. D-1518.

DuPONT ROSE DUST

Stops foliage diseases. Especially prepared for control of black spot, powdery mildew, rusts, and other foliage diseases of roses, carnations, snapdragons, etc. Contains famous DuPont "Fermate" fungicide, and sulfur. Use as a dust or spray. 8 oz. gun, 69c; 1 lb., \$1.00, postpaid. Order No. D-1519.

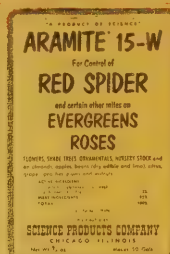

"Fermate" Fungicide

A new and highly efficient protective against many fungous diseases and safe to use on a great variety of plants. Especially effective in the protection of Roses, Apples, Celery, Tomatoes and Beans. Apply as a spray using 2 level tablespoonfuls per gallon water. 8 oz. pkg., 75c, postpaid. Order No. D-1520.

"TRI-OGEN" Complete Spray for Roses

By using Tri-ogen regularly and according to directions, you can control all disease troubles and practically every insect pest in the Rose garden. Tri-ogen now contains ferbam the wonderful new fungicide. "Kit E" makes 2 gals. spray; protects 6 to 10 Roses, \$1.50; "Kit A" makes 4 gals. spray; protects 12 to 20 Roses, \$2.35, postpaid. Order No. M-4131.

ARAMITE 15-W RED SPIDER CONTROL

Controls red spider and other mites on Evergreens, Roses, shade trees, nursery stock, ornamentals, and on certain fruit crops such as Apples, Peaches, Grapes. Safe — Sure — Easy to use. Just mix with water and spray. 4 oz. Pkg. (makes 16 2/3 gals. spray), \$1.00; 12 oz. Pkg. (makes 50 gals. spray), \$2.00, postpaid. Order No. S-1322.

DIMITE

Kills Red Spider and Mites

A quick, positive, long lasting contact control for mites and red spider damaging evergreens, flowers, fruit and shade trees, etc. Contains 25% Di (P-Chlorophenyl) Methyl-Carbinol (DMC) in a water mixable solution. 2 oz., 69c, postpaid. Order No. A-1700.

KILL RATS AND MICE

WARFARIN Kills Rats and Mice. 5% Concentrate

A standard full-strength concentrate to be mixed one part to nineteen parts of an edible substance attractive to rodents, such as ground corn, oats, etc. ¼ lb., \$1.75 each; ½ lb., \$3.00 each, postpaid. Order No. H-1218.

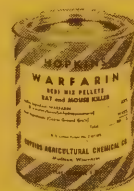

RED-I-MIX WARFARIN

A ready-to-use bait, scientifically blended with grain which has proven to be most attractive to rodents, and ground to the proper size to induce more feeding. 1 lb., 80c; 2 lbs., \$1.40, postpaid. Order No. H-1214.

HOPKINS RATTUNNL

No bother—no fuss—merely pull out telescoped Rattunnnl to full length, punch out windows, and place where rats and mice are known to run or feed. Excellent for farm, home, and commercial use. 1 lb., \$1.25, postpaid. Order No. H-1216.

WARFARIN PELLETS

Expertly blended Warfarin concentrate and grains, compressed into pellet form. Proved to be most attractive to laboratory and field rats. 1 lb., 95c; 2 lb., \$1.60; 5 lbs., \$3.25, postpaid. Order N H-1212.

DuPONT CERESAN M

For DRY or SLURRY application to control certain smuts and other seed-borne diseases of wheat, oats, barley, rye, sorghums, millets, and flax. Reduces seed decay and seedling damping-off of cotton, flax, peas and sugar beets, and surface seed-borne anthracnose and angular leaf-spot of cotton. ½ oz. treats

1 bushel. 14 oz. can, \$1.25; 3 lbs., \$3.55, postpaid. Order No. D-1522.

DuPONT ARASAN

Dry application only. Reduces losses from seed decay and damping-off. Two-way action—as a disinfectant, it destroys many surface seed-borne organisms; as a protectant, it protects seed against soil-borne organisms responsible for seed decay. 8 oz. treats 100 lbs. of Alfalfa, Grasses and sorghums. ¾ oz. pkg., 25c; 8 oz. can, \$1.00; 2 lb. can, \$3.20, postpaid. Order No. D-1524.

SPERGON

Non-Poisonous Seed Protectant Recommended for Beans, Peas, Corn

Growers report 35% increased yields from Spergon-treated seeds. Kills harmful soil fungi—prevents decay and damping-off, assures better germination, produces healthy, vigorous plants. (Can be used with inoculation.) 1 oz. treats up to 15 lbs. seed. 1 oz. pkg., 25c; 5 oz. pkg., \$1.00; 1 lb. can, \$2.25, postpaid. Order No. M-5133.

ISOTOX

Kills Wireworms, Seed Corn Maggot and White Grub Contains Lindane

Isotox seed treatment protects the germinating seeds from wireworm injury. Gives crops a chance to grow to bumper size and produce top yields. Makes a wise investment. Economical to use. Very effective. Rate of application: Corn, 4 ½ ozs. per bu.; Soybeans, 4 ozs. per 100 lbs. Price: 1 lb., \$3.80, postpaid. Order No. C-3500.

GARDEN AND NURSERY DEPARTMENTS

GRO-COATED GARDEN SEED

For the first time last season, we introduced Gro-Coated Brand Garden Seeds. Many of our customers report they were more than pleased with the results of the seed in spite of adverse weather conditions.

The big, healthy plants and the strong germination are amazing. To our formula has been added a root growth stimulator. This is designed to get your plants off to a fast start and give them a big boost.

Food is still high and you will want to plant a large garden this season. If you have not tried Berry's Gro-Coated Brand Seeds, we urge you to give it a trial and see the difference.

Our prices on fruit trees will save you money. All high quality stock, grown under the supervision of experienced horticulturists. Directions for planting are enclosed with each shipment.

Don't fail to check our offerings on plants, evergreens, nursery stock, lawn seed and other garden supplies for greater values.

Berry's FULL FLAVORED MELONS

MUSKMELONS

ORANGE FLESHED

No. 420—**HALE'S BEST** No. 36. 80 days. An outstanding shipping and market variety. Fruits 3 to 4 pounds. Very thick, deep orange colored flesh with a sweet aromatic flavor, and fine texture. The most popular muskmelon grown. Again we have a splendid variety here, which is very well liked among those who have planted them previously. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

No. 411—**HONEY ROCK**. 81 days. All America Winner and one of our most popular varieties for the home garden. Very early,

weighs about 4 lbs., flesh thick and very sweet. You've probably heard a lot about this melon as many people say it is second to none. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

No. 413—**HOODOO**. (Hearts of Gold.) 90 days. Fruits round, about 3 pounds. Very small seed cavity. Tender, juicy, sweet with delightful flavor. A superior home garden melon. This is another of our choice varieties and should not be overlooked in making your selection. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

No. 415—**BANANA MELON**. A long variety tapering at both ends. Skin is lemon color, when maturing. Pink flesh, delicious eating quality. Weighs 5 to 7 pounds. Many insist that there is none better. If you've never planted this variety before, be sure to do so this year. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

Plant in hills six feet apart each way or if in drills, have six feet between rows and thin plants to 12 inches in the row. Plant thick and thin out after plants are up. The average family needs at least 1 ounce which will plant 60 hills.

GREEN FLESHED

412—**EXTRA EARLY HACKENSACK**. 80 days.

A most popular variety for home use and truck gardening. Fruits large, globular flattened. Flesh

is thick, very sweet and spicy. This variety is equally as good as the best and is known among melon raisers as a prime favorite. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

401—**SELECT ROCKY FORD**. 92 days. Probably the most widely grown cantaloupe. Almost round. Green flesh of delicious flavor. Fruits weigh about 2½ pounds. You can plant this melon with our assurance of its goodness and delightful taste. You will not be disappointed. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

403—**HONEY DEW**. 112 days. Green fleshed fruits 7" x 8", skin smooth, hard and creamy white, flesh very thick, sweet, juicy and distinctly flavored. A good keeper. Those who enjoy melons at their best can be assured of satisfaction in this particular variety. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 80c; 1 lb. \$2.25.

SALMON FLESHED

406—**IROQUOIS**. 90 days. Wilt resistant fruits are almost round, prominent ribs, coarse netting, gray-green, about 6½ inches in diameter. Flesh is thick, sweet, fine flavor and salmon color. Postpaid: Pkt. 10c; oz. 35c; ¼ lb. 80c; ½ lb. \$1.25; 1 lb. \$2.40.

WATERMELONS

Plant in hills about 8 feet apart each way. Don't disturb the vines after they start to run. Don't plant until ground is warm and cover only about 1 inch. Because of long growing season required in northern states, plant only early varieties.

361 **DIXIE QUEEN HYBRID**. 85 days. This new Hybrid is really queen in its class. Disease resistant and a heavy producer. Fruit nearly round or stumpy oval, 15 x 12 inches. Color light green with darker green stripes. Weight 35 to 40 pounds. The sweetest melon you ever tasted. Flesh is very bright red, crisp and delicious. No hard centers. Postpaid: Pkt. 25c; oz. \$1.45.

374 **DIXIE QUEEN**. 85 days. Not quite as large as the Hybrid, although a fine melon for shipping and the home garden. A heavy producer and a winner in every way. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.25; 1 lb. \$2.20.

349 **NEW ICE BOX**. 65 days. A small early variety. Weighs about 10 pounds. Recently introduced as a novelty which can be kept in a home refrigerator, without cutting. Rind rather thin. Light green with darker irregular stripes. Flesh sweet and red. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 90c; ½ lb. \$1.50; 1 lb. \$2.50.

377 **STONE MOUNTAIN**. Light veined with dark green. Fruits round, weigh about 45 pounds. Flesh rich red of fine texture, tender, sweet, luscious. Wilt-Resistant. Postpaid: Pkt. 10c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.80.

360 **TOM WATSON**. 85 days. Very popular shipping melon of the long type. Keeps well. Flesh bright red of excellent flavor. Pkt. 10c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.80.

369 **GOLDEN HONEY**. 88 days. A novel item for the home and market gardens. Dark green, medium sized, long oval shape. Cream colored flesh which is very tender and delicious. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.25; 1 lb. \$2.20.

HOME GARDEN MELON PATCH

The 3 varieties you like the best. You can't beat them at any price. Save money. Order one of these collections today.

Early Kansas Stone Mountain Dixie Queen
No. 381 1 Pkt. each variety (Value 30c)—22c Postpaid.
2 collections each variety (Value 60c)—42c Postpaid.

No. 368—**IMPROVED KLECKLEY SWEET**. Finest melon for home and market gardens. An improved type of the old popular strain; larger and wilt-resistant. Medium early, dark green skin, with bright red flesh, very tender and melting. Postpaid: Pkt. 10c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

No. 356—**CONGO**. 88 days. This new watermelon has proved satisfactory in all areas. It has an extremely strong thick rind. Color alternately light green and very dark green. Flesh deep red and tasty. Resistance to Anthracnose. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.25; 1 lb. \$2.20.

No. 350—**BLACK DIAMOND**. 95 days. A very large melon, sometimes called Cannon Ball. Melon is dark green, nearly round. Flesh firm and red. Very sweet. Ships well and is one of the best all purpose varieties. Seeds large, dark brown. The kind that is usually found in markets. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.25; 1 lb. \$2.20.

376—**EARLY KANSAS RED SEEDED**. A remarkably early melon for its large size. This melon will qualify with top honors among some of the very best varieties. Postpaid: Pkt. 10c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.80.

LATE OR MAIN CROP

SMALL FRUITED VARIETIES

659—Red Pear.
673—Yellow Pear.

677—Small Fruited Mixed.
699—Ground Cherry.

10c Per Packet Postpaid.

NO-SEED HORMONE Blossom-set

BLOSSOM-SET, approved hormone spray, easy to use. Just mix with water and spray. Stops blossom-drop; makes blossoms set fruit chemically. Tomatoes ripen 2 to 4 weeks earlier. Fruits are larger, firmer, seedless and more delicious. 4 oz. makes 1 gal., 75c; Pint makes 4 gals., \$1.75. Postpaid.

666—GIANT IMPROVED PONDEROSA. 90 days. The largest tomato developed to date. A favorite of thousands. Almost seedless, making it fine for slicing. Vines are vigorous and productive, fruits large, oblong-purplish red, thin skinned and solid. Pkt. 10c; $\frac{1}{2}$ oz., 40c; oz., 75c. Postpaid.

671—OXHEART. 87 days. A distinctively attractive variety, entirely different from any other tomato. Increasing in popularity each year because of its very solid meaty fruits of a delicious sub-acid flavor, almost seedless. Flesh is pink. Pkt. 10c; $\frac{1}{2}$ oz., 45c; oz., 85c. Postpaid.

Berry's

Extra Delicious Vegetables · Beautiful Flowers

GRO-COATED BRAND for Greater Assurance of Better Stands

FIESTA COSMOS

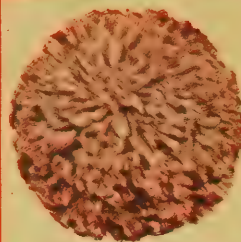

All the festival colors of old Mexico, combined in one flower by the plant breeder's magic, bring this sparkling newcomer All-America's TOP AWARD for 1952. For the first time, anywhere, there is a true scarlet in Cosmos. Easy to grow. No. 1204—Pkt., 15c, postpaid.

LIPSTICK PETUNIA

A vigorous new petunia in the dwarf bedding or Hybrid Nana Compacta class with an unusual color. Plants are compact, 12 to 14 in. high. Early and extremely free flowering, bearing a wealth of 2½ in. flowers all summer. No. 1314—Pkt., 25c, postpaid.

PEPPERMINT STICK ZINNIA

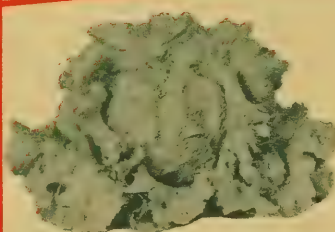

Color range is wide covering red and white, red and yellow, pink and white, orange and yellow, and purple and white, with many flowers colored exactly half and half. An early strain and will bloom till frost if kept picked. No. 1402—Pkt., 15c, postpaid.

HYBRID ONION

Y 42 Yellow Sweet Spanish type about 10 days earlier than this well known old variety. Bulbs are true globe shape, very firm, juicy and sweet. White flesh. Produces a heavy yield of large uniform and attractive onions. This Hybrid is worthy of a trial in your garden. No. 445—Pkt. 25c; oz., \$1.45, postpaid.

GREAT LAKES LETTUCE

A HOME GARDEN VARIETY, that will really stand up, and will produce hard heads in hot weather. The heads are of medium size, attractive deep green with thick, crisp leaves folding over the heads. Remains in condition long after forming. Resistant to tip burn. All America Selection. No. 339—Pkt. 15c; oz., 50c; ¼ lb., \$1.75, postpaid.

WADE BEAN

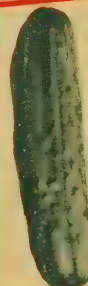

55 days. All-America Gold Medal Award. A first choice for the home gardener. Very resistant to disease. The large slender pods are quite uniform and borne well above the ground. An outstanding variety for canning, freezing or shipping. No. 153—Pkt., 20c; ¼ lb., 40c; 1 lb., 70c, ppd.

CHERRY BELLE RADISH

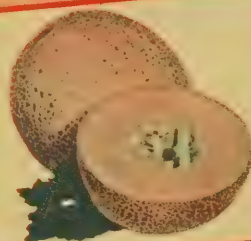

All-America Bronze Medal Winner. A small, round cherry, scarlet short top radish, that matures quickly. Delicious at eating stage. We consider it our best early radish. No. 535—Pkt., 10c; oz., 25c; ¼ lb., 60c, postpaid.

HYBRID CUCUMBER

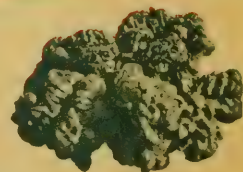

All-Time All-America Winner for 1953. Sure Crop. White spine type, matures in 58 days. Fruits are slender, blunt ended and hold its dark color quite well. Fine for slicing or may be used for pickles at early stages of growth. Excellent flavor and texture. No. 241—Pkt. 25c, postpaid.

MUSKMELON

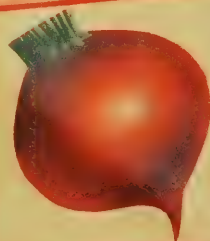

GRANITE STATE is a wonderful, medium size melon, developed especially for northern areas, or where an early melon is desired. Flesh is firm, thick and bright orange. Very sweet. Unusually high sugar content. Mildew resistant, prolific and quite early. Don't overlook this outstanding variety. No. 410—Pkt. 15c; oz., 35c, postpaid.

AMERICA SPINACH

50 days. All America Silver Medal Winner. A new strain noted for its long standing and heavy yields. Leaves glossy, dark green, thick and tender, rounded and heavy savoyed. It is an excellent slow bolting type. No. 584—Pkt. 10c; oz., 30c; ¼ lb., 75c; ½ lb., \$1.25, postpaid.

BABY BEET

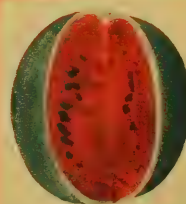

An early variety of deep blood red color. A selection of equally superior quality for table, canning and pickling. Smooth globe shaped roots with short tops. Extra sweet and crisp. It matures quickly but is a splendid keeper. No. 164—Pkt., 10c; oz., 25c; ¼ lb., 90c; 1 lb., \$2.50, postpaid.

POPCORN

SILVERGOLD. 105 days. A wonderful new novel popcorn of South American strain with flavor and tenderness of the White Hulless type. Ears are large, mixed with gold and silver kernels. Only a limited supply available. No. 308X—Pkt. 20c, postpaid.

MIDGET WATERMELON

New Hampshire Midget. Under favorable conditions it ripens in 65 days from seed. Light gray green in color with narrow, irregular stripes. Flesh bright red solid and sweet. Its average weight is about 3 pounds. Vines are small. An excellent melon for the home gardeners. No. 362—Pkt., 15c; oz., 35c, postpaid.

1 Pkt. each of the above 13 varieties \$2.20 value for \$1.89, Postpaid. Order No. 52X.

Berry's QUALITY GARDEN BEANS

GRO-COATED

Top Notch Golden Wax

YELLOW POD WAX BEANS

126—NEW BRITTLE WAX. 53 days. The outstanding variety for the home garden. Plant large, erect, vigorous, very productive. Postpaid: $\frac{1}{4}$ lb., 20c; $\frac{1}{2}$ lb., 35c; 1 lb., 58c; 3 lbs., \$1.45.

104—CHEROKEE WAX. 53 days. A new introduction. Pods entirely stringless, rich golden yellow, fleshy and tender. With less fiber. Ideal for canning or freezing. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

127—PENCIL POD BLACK WAX. 55 days. Of finest quality. Large plant, very productive. Pods round, slightly curved, golden yellow, absolutely stringless, brittle and without fibre. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

130—TOP NOTCH GOLDEN WAX. 51 days. This is an improved strain of regular Golden Wax. Pods average one inch longer and are much more productive. Very early—our best for the home gardens. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

POLE BEANS

144—CUTSHORT. 72 days. A favorite for planting in corn. Short, fat pods. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

141—KENTUCKY WONDER. 65 days. Best known and most popular pole bean. Heavy producer, pods hanging in clusters. Fleshy green and very crisp when young. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

119—KENTUCKY WONDER WHITE. Developed by the U. S. Department of Agriculture as a high yielding type of Kentucky Wonder. Plants vigorous with dark leaves. Pods oval smooth straight, dark green, stringless when young. Seeds white. Excellent for dry shell beans. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

149—MISSOURI WONDER OR NOX-ALL. 65 days. The earliest green podded pole or corn hill bean. Pods long, round and tender. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

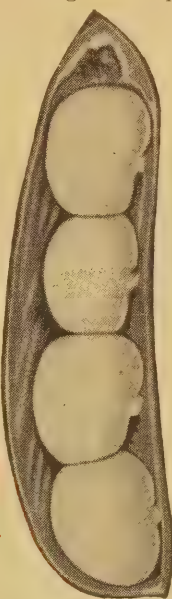

DRY SHELL BEANS

123—DWARF HORTICULTURAL. 60 to 62 days. An extremely vigorous bean. Used for snap beans, but grown chiefly for green shelled beans. Stringless. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

148—GREAT NORTHERN OR IDAHO. 90 days. A tremendous yielder of large white beans. Exceptional quality, the best for soup or baking. Postpaid: $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 25c; 1 lb., 40c; 3 lbs., \$1.05.

147—MICHIGAN NAVY. 95 days. A hardy and prolific small, almost round white navy bean. Used generally for baking. Postpaid: $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 25c; 1 lb., 40c; 3 lbs., \$1.05.

150—RED KIDNEY. 95 days. The old-fashioned baking bean. Produces large flat green pods, well filled with large dark red kidney-shaped beans. Postpaid: $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

Burpee's Bush Lima

LIMA BEANS

138—FORDHOOK BUSH. 75 days. Potato Lima type. Plants strong, erect, bearing pods in clusters of four to eight. Postpaid: $\frac{1}{4}$ lb., 20c; $\frac{1}{2}$ lb., 35c; 1 lb., 58c; 3 lbs., \$1.55.

139—BURPEE'S BUSH. 77 days. Very early. Plants dwarf, vigorous growers, bearing until frost. Pods large, tasty, finest quality. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

137—HENDERSON BUSH. 65 days. The small butter bean known as "Baby Lima." Plants bushy, very productive. Early Delicious flavor. Postpaid: $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

152—CANGREEN. 68 days. Can-green is notable for the green color of the fleshy part of the seed in the dry stage. This makes it attractive for canning either by the canner or in the home. It is also prolific, yielding a large crop of pods and seeds. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

124—GIANT SPECKLED LIMA. 90 days. Tall and strong plants. Stands up well in summer weather. Seeds 4 to 5 per pod, large oval greenish white with reddish mottling. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

POLE BEAN COLLECTION

$\frac{1}{2}$ lb. Missouri Wonder 30c
 $\frac{1}{4}$ lb. Cangreen Lima 33c
 $\frac{1}{2}$ lb. Kentucky Wonder 30c
 Catalog Value 93c. You save 14c.
 No. 112—3 varieties only 79c Postpaid.

Culture: Plant after all danger from frost has passed and for succession every 3 weeks throughout the season. Sow the bush varieties in rows 2 feet apart and 4 inches apart in the row. Plant the pole varieties in hills 2 feet apart one way by 3 feet the other, dropping about 5 or 6 beans in a hill and set a pole firmly in each hill. Cover all varieties about $1\frac{1}{2}$ inches deep with fine soil well pressed down to insure good germination.

GREEN POD BUSH BEANS

134—BURPEE'S STRINGLESS GREEN POD. 50 days. The old favorite garden bean for home, market or canning. Plants sturdy; very prolific. Pods round, fleshy, perfectly stringless, of excellent quality. Postpaid: $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

105—TOPCROP. 51 days. An All America Gold Medal Winner. One of earliest of the green pod bush beans. Pods are five and a half inches in length, round, dark green, stringless, resistant to mosaic disease. Postpaid: $\frac{1}{4}$ lb., 20c; $\frac{1}{2}$ lb., 35c; 1 lb., 60c; 3 lbs., \$1.55.

103—CONTENDER. 53 days. Excellent new USDA variety. Resistant to common bean mosaic and mildew, heat tolerant, heavy yielding, attractive, good quality. Pods are about 8 inches long, oval, dark green, stringless. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

116—TENDERGREEN. 50 days. Hardy and prolific. Light green pods 7 in. long are round, meaty, tender, stringless. For the home garden, canners or truckers. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 33c; 1 lb., 55c; 3 lbs., \$1.45.

129—LOGAN. 52 days. A winner for the home and market gardener. Plants 16 to 20 inches tall, upright, with large, medium green leaves. Pods long, straight, light green, stringless, meaty and smooth. Excellent for canning and freezing. Postpaid: $\frac{1}{4}$ lb., 20c; $\frac{1}{2}$ lb., 35c; 1 lb., 60c; 3 lbs., \$1.55.

Topcrop

Paradise

ASPARAGUS

101—WASHINGTON RUST PROOF. Preferred by market gardeners because of freedom from disease. A large straight luscious stalk with firm tips of finest quality. Postpaid: Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c; $\frac{1}{2}$ lb., \$1.05; 1 lb., \$1.90.

102—PARADISE. A sensational new and early asparagus. Producing a normal crop one year earlier than any other. A heavier yielder. Postpaid: Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., \$1.35; $\frac{1}{2}$ lb., \$2.60; 1 lb., \$4.90.

BROCCOLI

706—ITALIAN GREEN SPROUTING. 70 days. Forms large head consisting of a cluster of small heads. Both heads and stems are cooked and served like cauliflower but is easier to raise and has more delicate flavor. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., \$1.15; $\frac{1}{2}$ lb., \$2.00; 1 lb., \$3.50.

BRUSSELS SPROUTS

676—LONG ISLAND IMPROVED. 90 days. One of the best varieties for home gardens. The plants are dwarf and compact about 20 inches tall, producing solid round cabbage like balls. Excellent for freezing. Postpaid: Pkt., 10c; oz., 50c.

INOCULATE BEANS AND PEAS

Uni-Culture Garden Inoculation is packed with millions of beneficial bacteria which are effective in stimulating the growth of these garden legumes. This package will inoculate from 1 oz. to 10 pounds of the following seeds: Sweet Peas, Garden Peas, Garden Beans, Lima beans, Lupines and Peanuts. No. N10—12c, postpaid.

Benny's FINEST TABLE BEETS

GRO-COATED

Culture: Sow as early as ground can be worked in rows 18 inches apart and 1 inch deep. When the plants are large enough, thin out to stand 4 to 6 inches apart in the row. For winter use the turnip varieties may be sown in June, pulled after first frost, tops removed and roots stored.

Good for All

168—DETROIT PERFECTED. 58 days. The outstanding variety for home use, truck gardeners, and canning. Fine quality, tender and sweet. Roots perfectly round. With small tap root, uniform. Flesh dark red with light zone. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; 1 lb., \$2.40.

154—EARLY BLOOD TURNIP. 55 days. Excels in flavor and appearance. A medium early variety, roots top shaped, dark red, retaining color even when cooked. Sweet and crisp. Matures quickly but is a splendid keeper. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c; 1 lb., \$2.25.

167—EARLY WONDER. 52 days. This wonderful early beet is the result of years of reselecting and improving. For earliness it can't be beat. Very uniform in growth, root globular in shape. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c; 1 lb., \$2.25.

155—CROSBY'S EGYPTIAN. 53 days. An extra early variety preferred by market gardeners, splendid for bunching. Roots globe shaped, slightly flattened, with small tap root. Finest quality, tender and sweet. Flesh purplish-red. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c; 1 lb., \$2.25.

164—GOOD FOR ALL. 55 days. Roots smaller than Detroit. Flesh deep crimson and sweet. Leaves medium size smooth and distinct. A very tender variety for canning or the market gardener. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c; 1 lb., \$2.25.

GRO-COATED BRAND seed is your added assurance of the finest in seed preparations — developed to produce better stands, larger plants and bigger yields.

Detroit Perfected

MANGELS & SUGAR BEETS

Culture: Mangels are very easily grown. A loose or sandy loam type of soil is best to grow mangels. Drill about 6 pounds of seed per acre in rows 2 feet apart. Cultivate right after planting down the drill row. The following varieties are postpaid: oz., 15c; ¼ lb., 45c; ½ lb., 75c; 1 lb., \$1.40.

162—MAMMOTH LONG RED. 110 days. Heaviest yielding and largest of mangels. Flesh pink tinged.

165—KLEIN WANZLEBEN. 110 days. Our best sugar beet. Extremely rich in sugar, flesh fine grained.

SWISS CHARD

158—LUCULLUS. 50 days. Makes continuous greens of delicious flavor throughout the summer. Grows anywhere. Plant from early spring till July. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c; 1 lb., \$2.25.

CELERY OR CHINESE CABBAGE

175—75 days. Most popular for the home garden. Cylindrical, tapering heads. Crisp and tender. Plant during July-August. Makes fine chicken feed. Easy to grow. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 90c.

Benny's CABBAGE

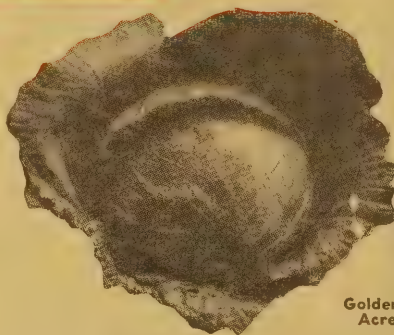

GRO-COATED

Culture: Start seed during the early months of the year in hotbeds, covering ¼ inch deep with fine soil. When plants are about 5 inches high and danger of frost is not too serious, transplant to rows 2 feet apart and 15 to 18 inches apart in the row.

179—GOLDEN ACRE. 65 days. A new variety, sure header; heads round and very solid. Yellows resistant. Used by truckers for earliest markets. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 55c; ¼ lb., \$1.70.

176—EARLY JERSEY WAKEFIELD. 65 days. Small compact conical heads, broad base. Few leaves permitting close planting. A favorite of market gardeners and shippers. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 50c; ¼ lb., \$1.65.

182—COPENHAGEN MARKET. 68 days. Finest round-headed early cabbage. Heads uniform, solid, excellent quality. Few outer leaves. Desirable likewise for early kraut. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 50c; ¼ lb., \$1.65.

Golden Acre

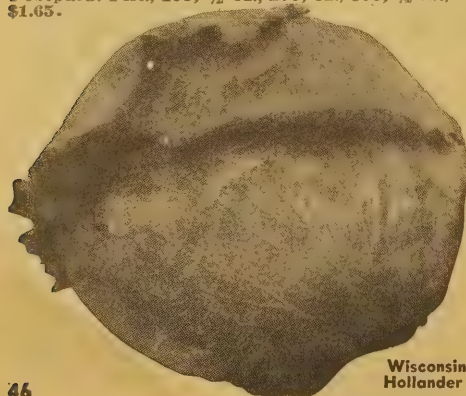

181—EARLY FLAT DUTCH. 80 days. A strain popular with market and home gardeners. Heads almost round, good solid quality, weigh about 5 lbs. Postpaid: Pkt., 10c; ½ oz., 18c; oz., 40c; ¼ lb., \$1.40.

190—WISCONSIN HOLLANDER. 95 days. This strain was developed from Danish Ball-head and will produce solid heads even on "yellows" infested land. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 55c; ¼ lb., \$1.70.

174—MARION MARKET. 80 days. Heads are almost round, very solid. Yellows resistant. Similar to Copenhagen Market but about 10 days later. Postpaid: Pkt., 10c; ½ oz., 25c; oz., 50c; ¼ lb., \$1.60.

186—PREMIUM LATE FLAT DUTCH. 110 days. Excellent for home and market garden use. Very solid, large, flat heads, 6 to 7 inches deep. High quality. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 50c; ¼ lb., \$1.65.

194—RED ROCK. 95 days. The largest and best red cabbage. It is fine for slaw, pickling or boiled. A sure header, an excellent keeper. Postpaid: Pkt., 10c; ½ oz., 25c; oz., 53c; ¼ lb., \$1.60.

Wisconsin Hollander

Berry's HIGH QUALITY CARROTS

Culture: For earliest crop sow in rows 12 to 18 inches apart just as early as the ground can be worked and cover with fine soil about ½ inch deep. When young and plants are well up, thin to 2 to 6 inches apart according to variety.

203—IMPERATOR. 77 days. An unusually fine variety. An All America Selection that does particularly well where soil is deep sandy loam. Roots are smooth slightly tapering to a stump-rooted tip, smooth, rich orange color, very little core, crisp and of fine sweet flavor. Exceptionally attractive for bunching. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., \$1.20.

201—OXHEART. 75 days. A short thick variety, best for heavy soil where it can be easily lifted. Roots orange-scarlet, about five inches in length; very heavy yielder. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., \$1.20.

204—DANVERS HALF LONG. 75 days. None better for home gardens or market. Flesh bright orange in color and very tender. Grows six to seven inches long, tapered. Very productive. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., \$1.20.

205—NEW CHANTENAY. 68 days. A fine sort for bunching, market or home gardens. About 6 inches long, stump-rooted, deep orange in color. A heavy yielder. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

212—NEW CORELESS CARROT. 65 days. The greatest improvement made on any vegetable in years. Fine flavor, tender, and sweet. Early uniform size. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

211—TENDERSWEET. An outstanding favorite for the home gardener. The rich deep reddish orange is attractive. Flavor is unsurpassed. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

Chantenay

HEAVY YIELDING STOCK CARROT

206—LONG ORANGE. 100 days. Suitable for stock or table use. Roots red-orange, tapered to a point. A good winter keeper. Oz., 25c; ¼ lb., 75c.

208—WHITE BELGIUM. 95 days. One of the best stock feeding carrots. Oz., 25c; ¼ lb., 75c.

White Plume Celery

CRISP CELERY

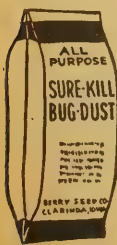

253—GIANT PASCAL. 125 days. An excellent variety for fall and winter use. Large, thick, crisp, stringless stalks with a delicious nut-like flavor. Blanches to a beautiful yellowish-white. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.95.

252—GOLDEN SELF-BLANCHING. 105 days. Stalks heavier than white varieties blanching into a rich golden yellow. Fine quality, crisp, tender, free from strings. Postpaid: Pkt., 10c; ½ oz., 40c; oz., 70c; ¼ lb., \$2.50.

BERRY'S "BUG DUST"

A powerful combination of Rotenone Lethane Cuproside and Nicotine. It has a triple action on insects, as a stomach poison, a contact poison, and as a repellent. Non-poisonous to humans and animals.

Berry's Bug Dust controls aphids, bean beetles, flea beetles, leaf hoppers, cabbage worms, cucumber beetles, potato beetles and other insects. Postpaid: 1 lb. bag, 49c; 3 lb. bag, \$1.40; 5 lb. bag, \$2.10.

COOL CRISP CUCUMBERS

241—HYBRID SURE CROP. 58 days. All Time-All America Winner. Disease resistant. Slicing type. Fruits slender, blunt ends, 8 to 9 inches long, holds its dark green color well after picking. Postpaid: Pkt., 25c; ½ oz., \$1.30; oz., \$2.50.

238x WOODRUFF. 62 days. A recent introduction. It is a great shipper and a fine cucumber for the home gardens. Tender flesh, rich dark green in color. Postpaid: Pkt., 15c; oz., 50c; ¼ lb., \$1.50; ½ lb., \$2.90.

226 NATIONAL PICKLING. 56 days. The finest early pickling type. Uniformly smooth. Rounded ends. Flesh thick. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; ½ lb., \$1.30; 1 lb., \$2.50.

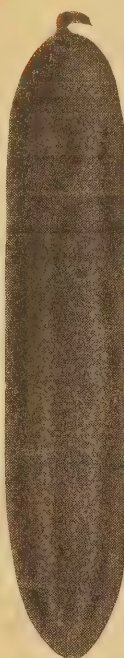

228 CHICAGO PICKLE. 59 days. One of the most popular pickling varieties; also good for slicing. Mid-season. Fruits medium green, uniform in size. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; ½ lb., \$1.30; 1 lb., \$2.50.

233 BOSTON PICKLER. 56 days. Very early and prolific; uniform size, slightly tapered, weigh about 1½ lbs. Dark green. Fine for tables. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; ½ lb., \$1.40; 1 lb., \$2.50.

234 IMPROVED WHITE SPINE. 65 days. Vigorous and productive, fruit uniform, seven to nine inches long, very showy. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 75c; ½ lb., \$1.40; 1 lb., \$2.50.

239 STRAIGHT 8. 66 days. The highest award winner of the All-American trials in 1935. The best new cucumber. Fruits are of excellent quality, uniform size, dark green color. About 8 inches long, 2 inches wide. Vines vigorous and productive. Ideal for the home garden, local market, or shipping. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., 85c; ½ lb., \$1.60.

236 IMPROVED LONG GREEN. 67 days. Standard late variety. Splendid for slicing, excellent quality. Fruits dark green, weigh 3 to 3½ lbs., flesh white, firm and crisp. Postpaid: Pkt., 10c; oz., 32c; ¼ lb., 85c; ½ lb., \$1.60; 1 lb., \$2.95.

Delicious ENDIVE

315—GREEN CURLED ENDIVE. 96 days. A delicious variety with finely curled compact heart. Very desirable for salads. Postpaid: Pkt. 10c; oz. 20c; ¼ lb. 55c; ½ lb. 95c.

317—BROAD LEAVED BATAVIAN OR FULLHEART. 86 days. A medium large plant with a very compact, full heart. The leaves are broad and well blanched. Handsome in appearance, superbly flavored. Postpaid: Pkt. 10c; oz. 20c; ¼ lb. 55c; ½ lb. 95c; 1 lb. \$1.75.

EGG PLANT

312—BLACK BEAUTY. 80 days. Valuable to home gardeners and truckers, for market. Ten days earlier than New York. Entirely spineless, sets fruit freely. Fruits are smooth, holding well after picking. Postpaid: Pkt. 10c; ½ oz. 35c; oz. 60c; ¼ lb. \$1.80.

PEPPY POP-CORN

Culture: Plant when danger of frost is over in hills 3 to 4 feet apart each way, leaving 3 or 4 stalks to the hill. May also be sown in rows 3 feet apart, dropping the seeds 12 to 18 inches apart in the row.

305—WHITE GIANT. Here is something new and different in popcorn. Everyone who likes popcorn should be sure to grow some of it. Kernels as big or bigger than the South American but white instead of yellow in color. Postpaid: ¼ lb. 12c; ½ lb. 20c; 1 lb. 35c.

306x—SOUTH AMERICAN HYBRID. 110 days. A great improvement over the open pollinated type. Larger ears, disease resistant. Can be picked with mechanical picker. Postpaid: ¼ lb. 20c; ½ lb. 38c; 1 lb. 70c.

302x—WHITE HULLLESS HYBRID. 95 days. New Min-hybrid 250 White Hull-less is the variety to grow this year. Gives you bigger yields, earlier maturity, better quality and a premium price. Postpaid: ¼ lb. 20c; ½ lb. 38c; 1 lb. 70c.

307x—IOWA POP. 95 days. This new hybrid is rapidly becoming the most widely grown of the Japanese Hull-less type. It is a white popcorn with excellent plant and popping quality. Postpaid: ¼ lb. 20c; ½ lb. 38c; 1 lb. 70c.

POPPING CORN

Hybrid popping corn is far superior to the open pollinated varieties. Will pop better and the flavor is delicious.

White Hullless
Hybrid

VITAMIN RICH Berry's LETTUCE GRO-COATED

Culture: Plant as early in the spring as ground can be worked. Light frost does not harm this crop. Sow seed sparingly in rows not less than 15 inches apart, covering seed ½ inch deep. In leaf varieties plants should be thinned out from 3 to 4 inches apart. For head lettuce start in a cold frame or hotbed and set out as early as possible.

Great Lakes

HEADING VARIETIES

339—GREAT LAKES. 74 days. All America Winner. New York Imperial type that will really produce hard heads in hot weather. Attractive deep green of good size with thick crisp leaves. Resistant to tipburn. Postpaid: Pkt. 15c; oz. 50c.

332—IMPROVED HANSON. 80 days. An old favorite for home and market gardens. A sure heading, hardy type. Large, compact, tender, sweet heads. Postpaid: Pkt. 10c; oz. 23c; ¼ lb. 70c.

333—BIG BOSTON. 75 days. A popular butter-head variety for forcing and outside culture. Will not stand hot weather. A medium sized, compact head with creamy yellow heart. Leaves smooth glossy tinged with reddish brown. Postpaid: Pkt. 10c; oz. 23c; ¼ lb. 70c.

336—ICEBERG. 84 days. A large late variety. Conical shaped heads—interior white, sweet and crisp. Outer leaves light green tinged with brown. A home garden variety. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 90c.

337—NEW YORK WONDERFUL #12. 77 days. Earlier than regular New York, but with all the good qualities of the older type. The outstanding shipping variety. Best for market gardens. Large solid heads, crisp and of excellent quality, and fine flavor. Postpaid: Pkt. 10c; oz. 33c; ¼ lb. 92c.

LOOSE LEAF VARIETIES

329—EARLY PRIZEHEAD OR BROWN LEAF. 40 days. Prizehead remains crisp and tender longer than others. Plant at least one row and see the difference. Postpaid: Pkt. 10c; oz. 23c; ¼ lb. 70c.

326—BLACK SEEDED SIMPSON. 46 days. Most popular light green variety. Very good for forcing. A heavy producer of large curled leaves. Postpaid: Pkt. 10c; oz. 23c; ¼ lb. 70c.

327—EARLY CURLED SIMPSON. 45 days. A widely used home garden variety. Excellently flavored, curly, crisp and tender leaves. Postpaid: Pkt. 10c; oz. 23c; ¼ lb. 70c.

328—GRAND RAPIDS. 40 days. Excellent for greenhouse forcing and early planting outside. Superior quality with beautiful appearance. Light green heavily fringed leaves. Postpaid: Pkt. 10c; oz. 23c; ¼ lb. 70c.

330—CHICKEN LETTUCE. A hardy tall growing non-heading dark green variety. Ideal for poultry and rabbit feed. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 50c; ½ lb. 90c; 1 lb. \$1.75.

324—SALAD BOWL. An all America Selection for 1952. A truly wonderful lettuce. Loose-leaf variety. Rich green, decorative leaves. Fast grower. Leaves hold their tenderness and fine texture over a long period. Supply very limited. Postpaid: Pkt. 15c; oz. 60c.

Berry's FULL FLAVORED PEAS

GRO-COATED

EXTRA EARLY PEAS

455—ALASKA WILT RESISTANT. Extra early. Smooth seeded pea, ready to use in 53 days. Ideal for first market and home garden use. An old reliable variety. Postpaid: ¼ lb., 16c; ½ lb., 23c; 1 lb., 40c; 3 lbs., \$1.10.

464—SUPREME WONDER. 12 inch—63 days to picking. A good reliable early variety. A favorite of many home gardeners for years. A very heavy bearer. Postpaid: ¼ lb., 17c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

463—LITTLE MARVEL. 18 inch—63 days to picking. The home gardeners favorite in the Middle West. Excellent quality and high yielding ability. This pea produces when many varieties fail. Postpaid: ¼ lb., 17c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

457—PREMIUM GEM. 24 inch—66 days to picking. We think this the best of the Gem Peas. Early and with the fine sugar flavor usually found in later varieties. Reliable for the home garden. Postpaid: ¼ lb., 17c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

460—THOMAS LAXTON. 30 inch—61 days to picking. A very popular home garden variety in the East and South. Fine for canning or market garden. Large and sweet flavored, an exceptional yielder. Postpaid: ¼ lb., 17c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

TABLE FIELD PEAS

479—CALIFORNIA BLACK EYE. Dwarf or half runner. 95 days. Much more productive than the old type. Postpaid: ¼ lb., 17c; ½ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

Fillbasket

Grow PEANUTS

Culture: Shell before planting. Plant in rows 2½ to 3 ft. apart, 10 inches apart in the row. Cover one to two inches. A sandy soil is best.

621—NEW MAMMOTH VIRGINIA. Of upright growth. Large pods and kernels. Always yield less imperfect pods than any other variety. Vines good for stock. Postpaid: ½ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

622—IMPROVED SPANISH. Bunch type. Early maturing with 2 white nuts in each pod. Plant 6 inches apart in 18 inch rows. Postpaid: ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

USE BERRY'S BUG DUST

Don't wait until the pests have destroyed your garden. Order Berry's Bug Dust with your seed order. See pages 46-47.

PARSNIPS

502—IMPROVED HOLLOW CROWN. 95 days. Roots long, white and smooth; hollow crowned. Tender and of excellent flavor. A good keeper. Grows 10 to 12 inch roots. Many gardeners prefer to leave parsnips in the ground over winter. Freezing is not harmful to this vegetable and improves the flavor. Postpaid: Pkt. 10c; oz., 20c; ¼ lb., 60c; ½ lb., \$1.05; 1 lb., \$1.95.

CULTURE

Plant as early as anything in garden. Light freezing does not hurt peas. Make successive plantings about one week apart. Peas will grow on poorer soils than most crops. Smooth varieties are hardiest, wrinkled varieties of finest quality. Plant about 2 inches apart, 2 inches deep.

Early and Mid-Season Peas

465—EARLY FILLBASKET. 24 inch—70 days. Pods 3 to 3½ inches long, slender and straight. Excellent for home gardens, canning or freezing. Postpaid: ¼ lb., 17c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

458—FREEZONIAN. 24 inch—70 days. Pods 3 inches long, medium green, slightly curved, containing 6 to 8 large tender peas. An excellent mid-season canning and freezing variety of fine quality. Be sure and try this variety in your garden this season. Postpaid: ¼ lb., 17c; ½ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

468—EVERBEARING. 28 inch—75 days. A long bearing, large seeded variety for home and market gardens. Wilt resistant and hardy with a superior flavor. A very popular mid-season variety. Postpaid: ¼ lb., 17c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

476—DWARF GREY SUGAR OR EDIBLE POD. Grows 2 to 2½ feet tall—65 days. A sweet, tender, and delicious edible podded variety that is very productive and wilt resistant. Small, smooth, sweet flavored. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

BERRY'S FAVORITE PEA COLLECTIONS

An early all season pea collection. Plant these four varieties on the same day and have a succession of peas for table, canning and freezing. They will mature in the order listed. **450—**¼ lb. Alaska W.R.; ½ lb. Little Marvel; ¼ lb. Fillbasket; ½ lb. Everbearing. 2 lbs.—4 varieties only **80c**; 4 lbs.—4 varieties only **\$1.45**. Postpaid. Save money on peas. Our stock is Western grown and will produce peas of unsurpassed flavor.

Freezonian

Berry's HIGH QUALITY PEPPERS

GRO-COATED

HOT VARIETIES

521—HUNGARIAN YELLOW WAX. 65 days. Peppers pungent and measuring 5 to 6 inches in length, rather slender but meaty, and tapering to a somewhat twisted point. They are waxy canary yellow in color, presenting a handsome appearance, and turn to a beautiful crimson at maturity. Very prolific and desirable. Also known as Bulgarian Yellow Wax. Postpaid: Pkt., 10c; ½ oz., 45c; oz., 80c; ¼ lb., \$2.40; ½ lb., \$4.50.

512—CAYENNE. 70 days. A favorite hot variety used largely for canning, pickles and drying. Plants large and productive. Fruits long, tapering; deep green changing to brilliant red. Postpaid: Pkt., 10c; ½ oz., 40c; oz., 75c; ¼ lb., \$2.25; ½ lb., \$4.25.

519—CHILI. 80 days. Used for canning and drying. Fruits long and tapering, deep green changing to bright scarlet; extremely hot. Postpaid: Pkt., 10c; ½ oz., 40c; oz., 75c; ¼ lb., \$2.25; ½ lb., \$4.25.

For Plants See Page 52

Ruby King Pepper

Culture: Sow seed ¼ inch deep in hotbed during February and March and when all danger of frost is over, transplant in the open in rows 3 feet apart and plants 2 feet apart in the row. Peppers require a warm, mellow rich soil.

SWEET VARIETIES

518—CALIFORNIA WONDER. 75 days. One of the finest mild sweet flavored peppers, with thicker flesh than other varieties. Upright, prolific, vigorous grower. Very attractive, smooth, uniform and deep green. Excellent for shipping home or market gardening. Postpaid: Pkt. 10c; ½ oz., 45c; oz., 80c; ¼ lb., \$2.40; ½ lb., \$4.50.

514—GOLDEN QUEEN. 78 days. A large yellow variety with sweet and mild flavor. Resembles Ruby King in size and shape. A deep green turning to attractive yellow. Postpaid: Pkt. 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; ½ lb., \$3.75.

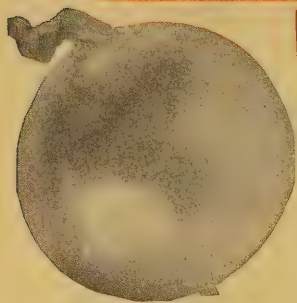

513—KING OF THE NORTH. 65 days. A sweet pepper like Ruby King but earlier. 65-70 days from time of setting out until fruit is ready to use. Plants 22-26" tall, erect, very heavy yielding and hardy. Postpaid: Pkt. 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.80; ½ lb., \$3.50.

517—PIMIENTO. 85 days. A good canning variety. Fruits heart shaped and very smooth; color dark green changing to crimson. Flesh thick, sweet and mild. Postpaid: Pkt. 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50.

515—RUBY KING. 70 days. Excellent for home and market garden and shipping. Plants medium dwarf, erect, productive. Fruits dark green turning to ruby red. Flesh thick, mild and sweet. Used for mangoes. Postpaid: Pkt. 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.80; ½ lb., \$3.50.

Berry's ONION

SEED AND SETS

Yellow Sweet Spanish

YELLOW ONION

435—YELLOW GLOBE DANVERS. 105 days. A splendid variety for home gardens and market. Nearly globe shaped with pure yellow skin, white flesh, and mild flavor. Very productive with fine keeping qualities. Postpaid: Pkt., 10c; oz., 55c; ¼ lb., \$1.65; ½ lb., \$2.95.

425—YELLOW SWEET SPANISH. 110 days. The most popular onion grown. Golden yellow, extra large and mild, very pleasant

flavored white flesh. An unusually heavy yielder. Postpaid: Pkt., 10c; oz., 60c; ¼ lb., \$1.80; ½ lb., \$3.50.

RED VARIETIES

432—SOUTHPORT RED GLOBE. 110 days. The finest of the red onion. Good for sets or storage. Uniform in size, handsome perfect globe shaped. An excellent keeper. Skin glossy red, flesh white, fine grained and tender. Postpaid: Pkt. 10c; oz. 60c; ¼ lb. \$1.80; ½ lb. \$3.50.

GARLIC SETS

448—GARLIC SETS. A bulbous root of the onion type, easily grown, used for flavoring. When leaves turn yellow, dig and dry in shade. Postpaid: ½ lb. 35c; 1 lb. 60c.

PUMPKINS

Culture: Plant seed in moderate rich soil when ground has become warm and danger of frost has past, in hills about 6 feet apart, covering lightly. Keep each variety separate as they are liable to mix. Pumpkin seed may be planted with corn with very satisfactory results.

481—MAMMOTH PRIZE. 115 days. The largest of all Pumpkins. Valuable for stock feeding, but is also fine for pies. Flesh is thick, of a beautiful bright yellow, fine grained, solid and tender. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 70c; ½ lb., \$1.35; 1 lb., \$2.50.

483—SWEET, OR SUGAR PIE. 105 days. Standard variety for pies. Flesh thick, dry and sweet, orange-yellow and of superior quality. Fruits weigh 6 to 8 lbs., keep well. Will make pies that will melt in your mouth. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

485—KENTUCKY FIELD. 115 days. Used largely for canning. Grow large, flat, weigh 10 to 15 lbs. Flesh deep yellow, coarse, thick and nutritious, and of good flavor. Also used for stock feeding. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

486—CONNECTICUT FIELD. 115 days. The standard cornfield pumpkin. Fruits grow large, weigh 15 to 25 lbs. Smooth, hard, orange-red skin; flesh orange-yellow, thick, coarse, and sweet. Fine for pies, canning, or feeding to stock. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

484—CUSHAW OR CROOKNECK. 110 days. Very popular variety. Very large, often 2 ft. long, crookneck shape. Creamy white shell; flesh yellow, solid, sweet. Excellent for pies; use also for stock feeding. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

487—GREEN STRIPED CUSHAW. 110 days. Cream with dark green stripe. 16-20 in. long, weigh 12 to 16 lbs. Yellow flesh. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

GRO-COATED BRAND

Garden Seed is far superior to ordinary seed. Big bumper yields.

Stronger Plants.
Disease Resistant.
Yet cost no more.

Mammoth Prize

NEW CROP—HIGH GERMINATION—Gro-Coated Brand

Culture: Onion seed germinates well in cool weather and may be planted very early in spring as soon as the ground can be prepared, in rows 12 to 15 inches apart, covering about ½ inch with fine soil well pressed down. When plants are 3 or 4 inches high, thin to 4 inches apart in the row.

WHITE ONION

434—WHITE SWEET SPANISH. 110 days. The largest and mildest of all onions. Globe shaped, pure white flesh, very firm, and mild. An unusual producer. Postpaid: Pkt. 10c; oz. 70c; ¼ lb. \$2.10; ½ lb. \$3.95.

440—WHITE BERMUDA OR CRYSTAL WAX. 93 days. Clear white, mild, delicate flavored large flat onion of superior quality. You can grow Bermudas from seed. Postpaid: Pkt. 10c; oz. 55c; ¼ lb. \$1.65; ½ lb. \$2.95.

433—SOUTHPORT WHITE GLOBE. 110 days. A splendid commercial onion, attractive in color, size and shape. A smooth globe type, flesh mild, fine grained and tender. A very heavy producer. Postpaid: Pkt. 10c; oz. 55c; ¼ lb. \$1.65; ½ lb. \$2.95.

441—WHITE PORTUGAL OR SILVER SKIN. 100 days. The most widely used white onion. This all purpose variety can be used for sets, pickling, green bunching or storage. Bulbs are medium size, flat, clear white, hard, fine grained, and of pleasing flavor. At picking stage bulbs are small, smooth and round. Raise your own this year. Postpaid: Pkt., 10c; oz., 55c; ¼ lb., \$1.65; ½ lb., \$2.95.

ONION SETS

Our onion sets are small sets. This means they are produced under the most ideal conditions. Berry's sets are long keepers, uniform in size and of finest quality. We guarantee delivery of your set order free from sprouts.

444—YELLOW. Postpaid: ½ gal., 60c; 1 gal., \$1.10.

Onion sets will be available from February 15th until supply is exhausted. We cannot ship onion sets after April 15th.

QUALITY ONION PLANTS. SEE PAGE 52.

Southport Yellow Globe

Berry's CRISP RADISHES

GRO-COATED

Culture: Sow seed as early as ground can be worked in rows about 15 inches apart. Cover with ½ inch of fine soil firmly pressed down. Sow the winter varieties in the last summer or early fall. Like the turnip they make their growth in the autumn.

530—EARLY WHITE TURNIP. 20 days. This popular radish is the earliest white radish and ready for the table in 24 days. Pure white, crisp and tender. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

526—CRIMSON GIANT. 28 days. The largest early radish. Will still be crisp and tender after growing to a huge size. We have had radishes two inches in diameter that were still sweet and crisp. The best all season radish in our trials. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

525—SPARKLER OR SCARLET TURNIP WHITE TIP. 26 days. The best of the white tip radishes from our observation. A very solid, tender, sweet, flavored radish, second only to Crimson Giant in ability to withstand pithiness. A most attractive variety, the scarlet top contrasts with the white bottom producing a showy product. Very popular with market gardeners as well as home gardeners. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

528—EARLY SCARLET TURNIP. 25 days. An early maturing variety. Roots small, round with red skin. Flesh very white, mild and crisp. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

533—FRENCH BREAKFAST. 25 days. A popular variety for forcing or early outdoor planting. Gets hollow in warm weather. Medium sized, olive shaped. Scarlet with white tip. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

541—ICEICLE. 27 days. The most popular white variety. Grows long and slender, free from side roots. Flesh clear white, brittle, mild flavored. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

542—CHINA ROSE WINTER. 52 days. Bright rose-red in color, 4 to 6 inches long, 2 inches in diameter, cylindrical shape. Flesh white, crisp, and mild flavored. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 50c; 1 lb., \$1.35.

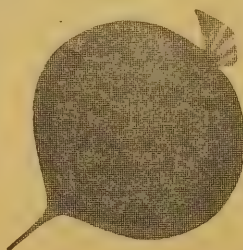

543—LONG BLACK SPANISH. 50 days. One of the hardest and best winter keeping varieties. Large, firm, jet black skin, flesh snow white. Solid, crisp and pungent. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 50c; 1 lb., \$1.35.

3 DELICIOUS SNAPPY RADISHES

The three best radishes for the home garden. Extra early, tender, snappy, delicious. Each one a superior variety. No. 539—35c Value at 24c. Postpaid.

1 Pkt. Cherry Belle
1 Pkt. Crimson Giant
1 Pkt. White Iceicle

24c Postpaid

Crimson Giant

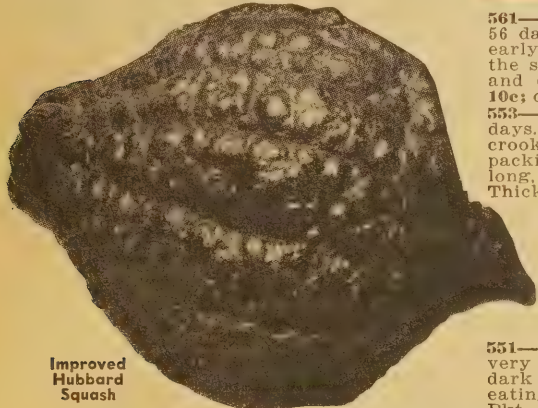

Benny's TABLE SQUASH

Culture: Plant in hills 4 to 6 feet apart each way. Put about 6 to 8 seeds in a hill and after plants are well established, thin out to three or four of the most vigorous plants.

552—GOLDEN HUBBARD. 100 days. Earlier than improved Hubbard. Fruits 8 to 10 pounds with a hard warty orange skin. Thick, yellow, fine grained, dry flesh; excellent quality for canning and freezing. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.45; 1 lb. \$2.50.

554—IMPROVED HUBBARD. 100 days. Standard winter variety for home and market gardens. The best shipper. Our strain is very early. Dark bronze-green, rind hard and tough, slightly warted. Fruits weigh about 12 pounds, flesh very thick; orange-yellow, fine grained, sweet and dry. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.45; 1 lb. \$2.50.

558—BUTTERNUT. 100 DAYS. An ideal home garden baking type, of highest quality. Flesh dry, light yellow with nutty flavor. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c.

Improved Hubbard Squash

SUMMER SQUASH

561—MAMMOTH WHITE BUSH SCALLOP. 56 days. A favorite with all our trade. An early maturing round flat squash, largest of the summer varieties. Fruit is clear white, and excellent for stewing. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.40; 1 lb. \$2.50.

553—GIANT GOLDEN STRAIGHTNECK. 55 days. A new variety selected from the crookneck. The straight neck permits easy packing and handling. Fruits 18 to 20 inches long, heavily warted, deep orange color. Thick and meaty flesh. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.40; 1 lb. \$2.50.

560—CASERTA. 50 days. All America Selection Gold Medal Winner. Earliest of all squash. Fruits 15 to 18 inches long, 4 to 5 inches wide. Attractive color, excellent flavor. Postpaid: Pkt. 10c; oz. 45c; ¼ lb. \$1.35.

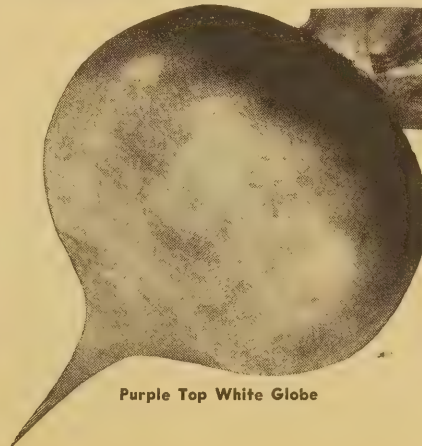

551—BLACK ZUCCHINI. 60 days. Fruits very nearly cylindrical, straight, smooth, dark green-black. Flesh greenish white at eating stage, very good flavor. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.45; 1 lb. \$2.50.

Culture: For summer use, sow seed during the early months of the year, ½ inch deep, covering with fine soil well pressed down. When very young thin plants to 4 or 5 inches apart. For fall and winter crop, sow in the late summer in the same manner as directions for an early crop.

603—SHOGGIN. 30 days. The most popular foliage turnip. Grown for early greens and small roots. Tops 18 to 20 inches tall, erect, bright green, strap leaved. Roots round, white, tender and mild. The fastest grower of all. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 35c; ½ lb. 60c; 1 lb. \$1.10.

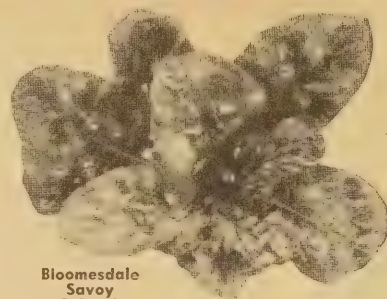

609—COWHORN. 70 days. A stock-feeding turnip. Roots 12 to 15 inches long, tapering. Flesh is sweet and tender. A good keeper. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 35c; ½ lb. 60c; 1 lb. \$1.10.

612—RUTABAGA, AMERICAN PURPLE TOP. 90 days. A dependable variety for home or market garden. Roots are large, round, yellow with purple top; flesh is light yellow, firm, sweet and tender. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 35c; ½ lb. 60c; 1 lb. \$1.10.

Purple Top White Globe

SPINACH

Bloomesdale Savoy Spinach

585—NOBLE GIANT. 45 days. Easy to wash. Leaves medium thick, green, very large, broad and smooth, with slight crumpling. Very good quality. The best of the large smooth-leaved type. A long-standing variety. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 45c; ½ lb. 75c; 1 lb. \$1.40.

583—BLOOMESDALE SAVOY. 40 days. An early variety. Popular for local and long distance markets, for canning, and home use. A long keeper after cutting. Leaves medium size, crumpled, glossy dark green. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 45c; ½ lb. 75c; 1 lb. \$1.40.

582—LONG STANDING. 45 days. A quick-growing, long-bearing variety for mid-summer use. Plants grow low and spreading, with pointed dark green leaves. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 45c; ½ lb. 75c; 1 lb. \$1.40.

581—NEW ZEALAND. 70 days. It thrives in hot, dry weather, and almost any soil. May be cut throughout the summer, but can not stand frost. Leaves small, broad and pointed, while plants are large and spreading. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 75c.

MUSTARD

712—TENDERGREEN OR SPINACH MUSTARD. 50 days. A quick-growing variety that does not go to seed as soon as other varieties. Resistant to heat and drought. Distinctive superior flavor. Rich in vitamins and iron. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 30c; ½ lb. 55c; 1 lb. 95c.

713—SOUTHERN GIANT CURLED. 65 days. The most popular and best-known mustard for greens. Leaves long, wide, light green, heavily crumpled and curled at the edges. Best known in the South. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 30c; ½ lb. 55c; 1 lb. 95c.

711—FLORIDA BROAD LEAF. 55 days. A large upright plant with unusually large, thick, bright green, smooth leaves. A popular variety. Postpaid: Pkt. 10c; oz. 15c; ¼ lb. 30c; ½ lb. 55c; 1 lb. 95c.

TOBACCO

729—JUDY'S PRIDE. Broad attractive leaves. Easy to cure. Used for fillers and wrappers; smoking or chewing. Postpaid: Pkt. 10c.

727—HAVANA. An early variety used largely for cigar wrappers on account of thinness and fine quality. Postpaid: Pkt. 10c.

SALSIFY

571—MAMMOTH SANDWICH ISLAND. Vegetable Oyster. An improved variety with roots 6 to 8 inches long, thick, tapering, smooth. Decided oyster-like flavor. Fine for soups, etc. Postpaid: Pkt. 10c; ½ oz. 30c; oz. 50c; ¼ lb. \$1.25.

MAMMOTH SUNFLOWER

MAMMOTH SUNFLOWER. This variety has a high feeding value and is easy to grow. Bears large heads 12 to 20 inches in diameter and sometimes yields 1000 pounds per acre. ¼ lb. 20c; ½ lb. 30c; 1 lb. 50c.

CALIFORNIA WONDER. Sweet. 75 days from plants. Very attractive, smooth, uniform and deep green. The outstanding variety for market gardeners and ship-

PERFECTION. 80 days. Heart shaped. Smooth, glossy green becoming crimson at maturity. Thick flesh and good flavor. Very Sweet.

Postpaid: 25 for 79c; 50 for \$1.19; 100 for \$1.98; 200 for \$2.98; 500 for \$4.98; 1000 for \$7.50.

50 of a variety minimum.

We cannot ship plants to California

If you do not specify the date you want your plants shipped, we will ship at the proper planting time for your territory. Plants are guaranteed to arrive in perfect condition for transplanting or we will replace plants or refund your money. Days listed after each variety indicates the time it takes for your plants to produce a crop. Plants often bleach to a yellowish-green or wilt when shipped. This does not hurt the plants and they will resume their natural green soon after transplanting. Complete planting instructions sent with your order.

CERTIFIED TOMATO PLANTS

They have proved to be the most satisfactory for large canning factory and home gardeners. Ready April, May, June.

EARLIANA. 66 days from plants. First early. Bright red.

MARGLOBE. 77 days from plants. Fruit thick, round, deep scarlet, wilt resistant.

RUTGERS. 86 days from plants. It ripens from inside out, wilt resistant. Bright red fruit.

Please state variety and shipping date. Tied 25 of one variety to a bundle.

1240—FOUR O'CLOCKS. (A) This old-fashioned flower bears profusely flowers of white, yellow, crimson and pink. Use it for hedges, for foundation plantings, and large beds for public places. Pkt. 10c.

Berry's

LAWN

Seed

SEEDING THE LAWN

The best time to sow the lawn is in early spring. However, beautiful lawns can be obtained from early fall seedings. If the seed is to be sown by hand it should be divided into two equal amounts. Sow one part East to West about six feet in width, and the second part North to South covering the same distance. This method assures equal distribution of seed and prevents patchy, uneven lawns. After seeding the lawn, rake it lightly and roll with a light roller. Keep the entire area moist for about twelve to fifteen days.

1 lb. sows 200 square feet, 10x20.
5 lbs. sows 1000 square feet, 20x50.

BERRY'S SUPREME LAWN SEED

This makes a fine, smooth lawn in the northern half of the United States. Contains chiefly Blue Grass, Red Top, Fescues and Rye Grasses. The quicker growing grasses provide a nice green stand while the slower kinds are coming on. It is our most popular mixture, because it gives such wonderful satisfaction. Postpaid Price: 1 lb. 95c; 3 lbs. \$2.65; 5 lbs. \$4.15; 10 lbs. \$8.00.

SHUR-GRO GRASS MIXTURE

Though less expensive than our Supreme Lawn Seed, this mixture gives very good results. It will produce a quick cover of green grasses. This mixture contains some White Dutch Clover. High germinating and free from chaff. Postpaid: 1 lb. 75c; 3 lbs. \$2.10; 5 lbs. \$3.25; 10 lbs. \$5.95.

New! STOP-GRASS New!

When sprayed on grass early in season, this NEW chemical inhibits growth for 4-5 months! No mowing or edging necessary during this period. Grass remains beautifully green. Saves tiresome work of mechanical edging. Spraying grass in Fall inhibits grass growth in following season! **FOR EDGING ONLY! NOT FOR USE ON MAIN BODY OF LAWN!** 1 1/4 oz. for strip 800 ft. by 6 inches or 400 ft. by 12 inches \$1.00; 4 oz. for 1600 ft. by 6 inches \$2.25. Postpaid.

There is nothing that will enhance the attractiveness, and add to the value of a home more than a well planned and well kept lawn.

BERRY'S SYLVAN FOR SHADY AREAS

This contains grasses naturally adapted to growing in shade, such as Chewings Fescue and Poa Trivialis. Fine for grounds shaded by trees or buildings. In heavy shade a light application of lime in addition to fertilizer will improve results. This is a dandy mixture. Postpaid: 1 lb. \$1.05; 3 lbs. \$3.00; 5 lbs. \$4.75; 10 lbs. \$8.50.

WHITE DUTCH LAWN CLOVER

The small white clover so popular for lawns. This may be mixed with any lawn grass you have on hand or sown on an old lawn in the early spring. Very drought resistant. Helps soil fertility. Seed is very small. A pound sows 1,000 or more square feet, depending on how heavy percentage of clover is desired. Postpaid: 1 lb. 90c; 3 lbs. \$2.55; 5 lbs. \$4.00; 10 lbs. \$7.85.

EXTRA FANCY KENTUCKY BLUE GRASS See also page 17

Most satisfactory all purpose lawn grass for the entire U. S. except for extreme southern areas where Bermuda grass will do better. Stands drought. Makes excellent turf. Grows from early spring to late fall. Postpaid: 1 lb. \$1.00; 3 lbs. \$2.85; 5 lbs. \$4.50; 10 lbs. \$8.50.

OTHER GRASSES FOR LAWN

CHEWINGS FESCUE. Does well on any kind of soil. Produces a fine firm matted turf. Plant spreads by a development of new shoots and a single plant often covers an area several feet in diameter. Sow 1 lb. to 200 square feet. Postpaid: 1 lb. \$1.00; 3 lbs. \$2.85; 5 lbs. \$4.50.

CREeping RED FESCUE. Fine round bladed grass, and has a deep green color. This grass thrives on all types of soil. It maintains its color the year round and is excellent for shady places. Can withstand wear and will not winter kill. Ideal for lawns and playgrounds. Very hardy, slightly red at the base. Sow 1 lb. to 150 square feet. Postpaid: 1 lb. 90c; 3 lbs. \$2.35; 5 lbs. \$4.00.

ILLAHEE FESCUE. A new strain of creeping red, spreading from the roots, creeping under the ground. The texture is fine and the color delightful green. This strain is desirable for areas subject to heavy wear. Should be sown with a nurse crop. Postpaid: 1 lb. \$1.00; 3 lbs. \$2.85; 5 lbs. \$4.50.

HIGHLAND BENT. A popular grass for golf courses. Also used as a lawn grass. Makes a beautiful lawn. Rain will not wash ditches in your terrace or your sidewalk will not be covered with dirt if you use bent grass. Sow 1 lb. to 200 square feet. Postpaid: 1 lb. \$1.05; 3 lbs. \$3.00; 5 lbs. \$4.75.

RED TOP. A fine bladed grass that succeeds on most any soil. Does best under moist conditions. Used in almost all lawn mixtures. Sow 1 lb. to 200 square feet. Postpaid: 1 lb. 85c; 3 lbs. \$2.40; 5 lbs. \$3.50.

RYE GRASS. Provides green growth while other grasses are getting started. Used in most lawn mixtures as a nurse crop and thrives well in most any soil. Sow 1 lb. to 200 square feet. Postpaid: 1 lb. 35c; 3 lbs. 90c; 5 lbs. \$1.35.

BERMUDA GRASS. Most valuable grass for the South. Will withstand drought and the hot summer heat. Makes a beautiful lawn and gives quick results. Unhulled only. Sow 1 lb. to 500 square feet. Postpaid: 1 lb. 80c; 3 lbs. \$2.10; 5 lbs. \$3.25.

Berry's QUALITY NURSERY STOCK is Guaranteed

All NURSERY PRICES ARE PREPAID Save an Extra 20%

Berry's guaranteed nursery stock is grown by experts, wherever possible in northern sections for extra-hardiness. Transplanted, pruned and root pruned, to insure sturdy, well rooted, well branched plants that will thrive anywhere. Do not be misled by claims of superior quality—we offer high quality at very low prices.

If you can not plant your stock when you receive it, dig a shallow trench or hole, lay the plants in this, covering the roots with earth. When planting be sure the holes are plenty large to allow full spread of the roots. Sprinkle fine top soil around the roots, water thoroughly, then rake some dry soil over the top. Keep moist but not waterlogged until growing.

Berry's send you complete instructions for planting your nursery stock. These are included in the package. Read them carefully and you will succeed.

LIBERAL GUARANTEE
 Berry's guarantee all their Nursery Stock to be as good or better than described and to reach you in proper planting condition. If not, we will replace it free of charge but you must notify us within 45 days after you receive it.
 Our Nursery Stock is guaranteed true to name. If proven otherwise we will replace such stock free or refund the exact amount paid us but you should notify us during the first blooming or fruiting season.
 Vigorous growth depends upon proper planting, pruning, soil, climatic conditions and other factors we can not control. But, if any stock does not start growth, we will share the loss with you by replacing such stock at half the catalog price. To take advantage of this very liberal offer, you must notify us before August 1st, next. The half price replacement will be shipped prepaid during the next planting season.

Berry's HARDY PERENNIAL PLANTS EASY TO GROW BLOOM FOR YEARS

4 to 5 ft. Prepaid.....Each \$4.50; 2 for \$8.50

SEEDLING TREES FOR WINDBREAKS

Our tree seedlings are well rooted, hardy and vigorous. They are easy to start, planting instructions being furnished. We ship prepaid at proper planting time early in the Spring and guarantee satisfaction.

We suggest planting all sizes of tree seedlings in rows where it is convenient to cultivate them often the first two or three years—rows about 36 inches apart with the seedlings 12 to 24 inches apart in the row—they grow more bushy when planted 24 inches apart. After 2 years, when the trees are well rooted and about 5 feet tall, transplant into permanent location.

LOW PREPAID PRICES ON SEEDLINGS

All items on this page can be shipped in Spring or Fall.

Fine EVERGREENS at LOW COST

LARGE EVERGREENS FOR WINDBREAK

Our special value for this season. We make this offer only on the 4 varieties listed below. These twice transplanted evergreens are an ideal size for windbreak. Large, well branched, 1 foot trees. May be planted in their permanent location, 8 to 12 foot apart.

WHEN ORDERING IN QUANTITIES OVER 10 PLEASE GIVE US YOUR NEAREST EXPRESS STATION

NORWAY PINE

One of the best of the larger growing pines. Used for windbreaks or screen plantings.

PONDEROSA PINE

A hardy long needed tree that will do well where many evergreens fail. Excellent for poor soil.

AMER. ARBOR VITAE

An old standby. Responds well to shearing. Excellent for hedges, windbreaks, foundation plantings.

NORWAY SPRUCE

The aristocrat of evergreens. Popular for windbreak plantings. The most rapid grower of any spruce.

Red Cedar

Norway Spruce

1 Foot Size EVERGREENS

Big transplants to be set in permanent location as low as 31c each. Fine for either landscaping or a windbreak planting.

SCOTCH PINE. (50-70 ft.) One of the fastest growing pine, and the best of the pine family for poor soil and adverse conditions. Excellent for Christmas trees, windbreaks, background and reforestation planting.

PFITZERS JUNIPER. Most popular of the dwarf evergreens. Its spreading habit lends a grace captured by no other evergreen. Very hardy, easy to grow. One of the most popular evergreens for foundation plantings.

NORWAY PINE. (60-70 ft.) One of the best of the larger growing pines. Excellent for windbreak, background or screen plantings. Has rich, dark, long, heavy needles and relatively rapid in growth.

COLORADO BLUE SPRUCE

Now you can have America's favorite of all ornamental evergreens in your lawn—famous Colorado Blue Spruce. We are fortunate in being able to offer you this variety at this low price. These 4 year old transplants 10-12 inches tall can be set in a permanent location. If you have room for a larger planting order two or more collections. **No. 725**—1 collection of 4 trees **\$1.95**; 2 collections **\$3.85**, postpaid.

HARD Sugar MAPLE

While these trees are rather slow growing, the years go by pretty fast. You'll be surprised how quickly they make a nice showing. These trees last for years and make a living monument to foresight. Extremely hardy. A tree of rare beauty. At this special very low introductory price you can get out a lot of them. Plant them in lawns, along streets and roads. All prices are prepaid!

MAPLE TREE PRICES

1 to 1½ ft. size: 10 for **\$1.55**; 25 for **\$3.40**; 50 for **\$5.95**; 100 for **\$10.20**.

EVERGREENS for Lawn Planting

POSTPAID: Your Choice

1 of any variety **\$1.40**
2 of any variety **2.55**
4 of any variety **4.25**

PFITZERS JUNIPER. Exceptionally beautiful, graceful and hardy in shade or sun. Spreading branches 3 to 4 feet at maturity. 12 to 15 inch size.

PYRAMIDAL ARBOR VITAE. Of dense, compact growth and Pyramidal in form, deep rich green in color, and reaches a height of 15 to 18 feet. With few exceptions it has but one main stem which makes it less liable to damage. 12 to 15 inch size.

GLOBE ARBOR VITAE. A hardy bright green globe type round bushy and compact tree. An old well known favorite always in demand for foreground planting. Contrasts well with Pfitzers Juniper. 10 to 12 inch size.

A DOORWAY Planting

This collection includes 2 Pyramidal Arbor Vitae for the foreground 1 to 1½ ft. size; 2 Pfitzers Junipers for the side 9 to 12 inch size; and 2 Globe Arbor Vitae for the background 8 to 10-inch size. Start landscaping your home now. Directions for planting enclosed with each order. **No. 726**—6 trees, 2 of each **\$4.69**, postpaid.

EVERGREEN SEEDLINGS

Evergreen Seedlings should be planted in beds and cultivated like garden plants. Rows may be 18-24 inches apart with the Evergreens 10-15 inches apart in the row. Provide some shade for the first year. A covering of lath spaced about 1½ inches apart with slats running north and south is good. When 18-24 inches high, transplant into permanent location. For further planting instructions and windbreak ideas ask for our Free Circular giving a full description of all varieties.

- 2 American Arbor Vitae
- 2 Black Hills Spruce
- 2 Colorado Blue Spruce
- 2 Scotch Pine
- 2 Red Cedar

No. 720—10 trees for **\$2.30** Postpaid.

COLORADO BLUE SPRUCE. (35-50 ft.) The aristocrat of the evergreen family. Will always be the most popular variety in the middle West. Very hardy, easy to grow. Symmetrical and beautiful.

AMERICAN ARBOR VITAE. (30-40 ft.) An old standby in the Arbor Vitae family. Grows well on either high or low locations. Responds well to shearing. Excellent for hedge purposes, windbreaks, foundation plantings and reforestation.

PYRAMIDAL ARBOR VITAE. One of the best type of dwarf evergreens. Ideal for foundation plantings, particularly at the entrance way or the corners of the home. Grows slim and compact. Responds very readily to shearing.

100 EVERGREEN SEEDLINGS

Our favorite collection containing the best varieties. An ideal combination for any windbreak. These seedlings are easy to start and cost less than 5c each.

25 Colorado Blue Spruce, 25 Norway Spruce, 25 American Arbor Vitae, 25 Scotch Pine. All 100—3 to 6 inch seedlings. **No. 722**—**\$4.65**, postpaid.

ROSA MULTIFLORA

The Multiflora Rosa now seems to offer the solution for the high cost of farm fencing. This thorny shrub is easy to establish yet not difficult to eradicate when no longer needed. Crops may be planted right up to the hedge as it does not compete seriously for soil moisture. Requires no pruning. Has ornamental foliage. Fruits and flowers an excellent cover for wild life. Postpaid:

Berry's QUALITY FRUITS ARE ALL Prepaid

FINEST QUALITY

Our enviable reputation is built on high quality at low prices—superior values. We have developed the largest business of its kind in the country on this sound policy.

These same high standards prevail in our nursery department. Each and every item is carefully tested before Berry's will put their name behind it. You can order our nursery stock with full confidence that it is accurately and honestly described, that the quality is of the highest and the prices the lowest.

In the fall, we can supply all nursery stock except Cannas, Dahlias, and Gladiolus Bulbs, Peaches, Sweet Cherries, Apricots and Roses. Most kinds of nursery stock can be very successfully planted in the Fall, even in severe climates.

EVERY ITEM

WHEN WE SHIP

In the spring, we study the weather reports and ship at the proper planting time in your locality. Don't be alarmed if your shipment is not received on the first warm day, for you may be sure your order is having careful attention.

When spring opens up all over the Central States, we are not always able to ship as promptly as we would like because of the manpower problem. As your order will be shipped as soon as possible, it is not necessary to write us. You may be sure that even in the rush season, your order will be received in time for successful planting.

Strawberries, Cannas, Dahlias, Peonies, Gladiolus and Perennials are shipped separately and not included in the same package with Fruits, Shrubs, etc.

GIANT FRUIT TREES

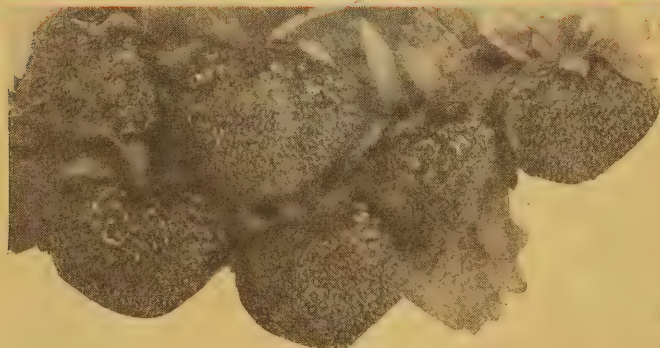

These are larger than regular sizes. Have grown at least 3 yrs. in the nursery, making them extra well rooted and branched. Will bear 2 to 3 yrs. quicker than regular size.

DWARF FRUIT TREES

Low growing compact trees. Fine for limited space, growing only 8 to 10 ft. tall. Same fruit as larger growing trees. ½ ft. tall, ½ inch trunk diameter.

Delicious STRAWBERRIES

FOR YOUR GARDEN

SURE CROP

No. 4004—BLAKEMORE. New early market berry. Extra vigorous grower, heavy bearer, very drought resistant, healthy and good plant maker. Recommended for Northern States. BLUEBERRIES

2 FOR
\$2.75
POSTPAID

You can now grow these large, sweet, tasty and cultivated Blueberries in your own garden. Have plenty of luscious berries for your table, for pies, muffins, etc. Do best in a moist, acid soil. If your soil is sweet you can easily acidify it by the use of peat moss or partially rotted vegetable matter around the plants. The bushes grow 3 to 4 ft. high and should be planted 4 ft. apart in the home garden. Plant at least two varieties for the best fruiting.

No. 6820—**JERSEY**. Extra large, firm, sweet berries. Make delicious blueberry pies. Midseason. 2 yr. plants, 2 for \$2.75, 6 for \$7.25; 3 yr. plants, 2 for \$3.45, 6 for \$9.35.

No. 6819—**RUBEL**. Ripens late. Clusters of large delicious dark blue berries. 2 yr. plants, 2 for \$2.75; 6 for \$7.25; 3 yr. plants, 2 for \$3.45; 6 for \$9.35.

No. 6818—**RANCOCAS**. A good producer of large berries that are sweet and tender. Early to midseason. 2 yr. plants, 2 for \$2.75, 6 for \$7.25; 3 yr. plants, 2 for \$3.45, 6 for \$9.35.

Blueberry Garden: 1 each Jersey, Rubel and Rancocas.

No. 6821—2 yr. plants, 3 for \$3.65.

No. 6822—3 yr. plants, 3 for \$4.55.

GOOSEBERRIES

Delicious for pies, sauce, jelly or canning. Lots of fruit with no work. Extremely hardy, bear every year. Sturdy, well rooted 2 yr. No. 1 plants.

No. 6841—**DOWNING**. Very large, light green, juicy berries of extra quality. Strong, vigorous, hardy. Commercial variety.

Postpaid: 75c each; 5 for \$3.25

No. 6840—PIXWELL GOOSEBERRY

A new, improved variety—very fine quality. Heavy producer. Fruit hangs below branches for easy picking. Postpaid: 95c each; 5 for \$4.25.

BERRY'S PREPAID NURSERY PRICES Save You Money!

Peaches

THE BIG MONEY CROP

Bear well third year after planting! Should be planted early in the spring and not in fall. Berry's prepaid prices save you at least 20%. The 4/6" and 5/7 ft. sizes are usually shipped by prepaid express. Be sure to give name of most convenient express station.

PREPAID PEACH PRICES

Description of Grade below. Mailable	1-3	4-7	8 or more
Economy 2/3', 3/4"	\$.70	\$.80	\$.55
Commercial 3/5', 3/4"	.85	.85	.80
Home Orchard 4/6', 3/4"	1.40	1.30	1.25

Giant size available in 3 varieties only: Elberta No. 6460; J. H. Hale No. 6461; Golden Jubilee No. 6464.

No. 6402—**EARLY ELBERTA**. Freestone. Large golden yellow with red cheek. Yellow flesh, firm, juicy, luscious flavor. Earlier than Elberta.

No. 6403—**ELBERTA**. Best known freestone, commercial variety. Yellow with reddish cheek. Excellent for canning. Giant Size No. 6460 (5/7', 3/4") \$1.75 each, Prepaid.

No. 6405—**GOLDEN JUBILEE**. Yellow freestone. Firm, juicy. 15 to 20 days earlier than Elberta. Giant Size No. 6464 (5/7', 3/4") \$1.75 each, Prepaid.

No. 6406—**HALE HAVEN**. Best early freestone. Strong grower, very hardy—heavy bearer of fine flavored yellow peaches. No. 6407—**J. H. Hale**. Earlier and larger than Elberta. Unusually fine flavor. Good yellow with red blush. Good keeper. Plant with other varieties. Giant Size No. 6461 (5/7', 3/4") \$1.75 each, Prepaid.

No. 6413—**POLLY**. A very fine, white freestone peach. The fruit is large, blushed and ripens just before Elberta. The flesh is juicy white, but firm. Rich, delicious flavor. It bears young and is a heavy, consistent bearer. An excellent peach for all-around home use and for local markets. A self pollinizer. One of the hardest Peaches!

No. 6415—**RED HAVEN**. The peach with all the "extras"—extra early, extra hardy, extra juicy, extra red, and extra heavy bearer. New and highly recommended.

No. 6412 VALIANT PEACH

Canadian Introduction. Large, hardy freestone. Flesh is firm, juicy and sweet. 4 to 5 ft. size. Postpaid: \$1.65 each; 4 or more \$1.50 each.

No. 6200—**MAX-RED BARTLETT PEAR**—Patent No. 741. Newest and finest ever! This new, bright red pear is as delicious as it is beautiful. The creamy white flesh is firm, and has more natural sugar content by actual test than the parthenocarpic Bartlett that we all know. Be one of the first to enjoy this new, delicious pear.

Prepaid Price 3 to 4 ft. trees \$2.50 each.

No. 6220—**DWARF MAX-RED BARTLETT PEAR**

Same wonderful fruit as described above. Dwarf sized tree. Postpaid Price. \$3.50 each.

Cherries

EVERY HOME SHOULD HAVE SOME

SWEET CHERRIES

These varieties are deliciously sweet, and especially adapted for eastern states. Not as hardy as Sour Cherries, so not recommended for severe climates. Order in Spring only.

Prepaid Prices	1-3	4-7	8 or more
Commercial 3/5', 3/4".....	\$1.55	\$1.45	\$1.40
Home Orchard 4/6', 3/4".....	1.85	1.75	1.70
Quick Crop 5/7', 1/2".....	2.25	2.10	2.00

No. 6301—**BLACK TARTARIAN**. Very large, purplish-black cherries of finest flavor. Rich, juicy. Excellent for eating fresh. Popular in the East.

No. 6303—**SCHMIDT'S BIG**. New attractive sweet cherry, rich mahogany in color. Grows in clusters. Yields an abundant crop.

No. 6304—**YELLOW GLASS**. Hardest of all sweet cherries. Golden yellow fruit is juicy and well flavored.

No. 6307—**BING**. Unusually large, heart-shaped, dark maroon fruit that is extremely attractive for market. Flesh is firm and juicy, full of rich, delicious flavor. Vigorous grower. Ripens in late June.

SOOR CHERRIES

These varieties are hardy anywhere and bear young. A big profit crop used for eating, canning, preserves and pies.

Prepaid Prices	1-3	4-7	8 or more
Commercial 3/4', 3/4".....	\$1.35	\$1.25	\$1.15

ORDER ALL PLUMS IN SPRING OR FALL

European and Japanese Group

These favorite varieties are not as hardy as American varieties so they are especially suited for states east of Illinois. Fine for eating or market. Plant at least 2 for proper cross pollination.

No. 6506—**ITALIAN BLUE PRUNE**. Old favorite Italian dark blue Prune Plum. Juicy and well flavored. Excellent for eating fresh or canning. Not used for jelly.

No. 6507—**GREEN GAGE**. Large sweet yellowish green fruit. Juicy and tasty for eating fresh or canning. One of the best late Plums. Stemmy cling stone.

No. 6508 — **STANLEY PRUNE**. The most profitable Plum for Commercial or Home Orchard. Earliest, hardest European variety. Consistent bearer of large, blue, richly full flavored fruit. Freestone, sub-acid.

Hardy American Varieties

No. 6500—**SUPERIOR**. Qualities of California Plums, extra hardy, will quickly bear large crops. The huge dark red plums have juicy, full flavored tender yellow meat. Best for eating fresh, canning, or plum butter. Giant Size No. 6566 (5/7', 3/4") \$2.35 each. Prepaid.

No. 6501—**RED WING**. An unusually large, dull red Plum developed in Minnesota. Flesh is rich, yellow, firm, juicy and sweet. Fine for eating or canning.

No. 6502—**UNDERWOOD**. Freestone. Extra large, deep red fruit. Ripens early and bears large crops. Very hardy.

No. 6504—**TOKA**. Highly recommended as a pollinizer for other Plums. Fruit is quite large and freestone. Apricot color with firm yellow, rich flavored flesh. Very hardy.

No. 6525 — **PIPESTONE**. Very large, red fruit. Firm, juicy plums with a wonderful flavor. Extra hardy, ripens early and yields heavily.

All Apples Can Be Shipped in Spring or Fall

The Apples that can be furnished in Dwarf or Giant size have the lot number shown in descriptions below. See opposite column and page 60 for information on these special sizes.

WINTER APPLES

No. 6107—DELICIOUS YELLOW. GIANT NO. 6169. Considered even better than Red Delicious. Superior in flavor, texture, and keeping qualities. The very best golden apple.

No. 6108—DELICIOUS NEW RED. GIANT NO. 6160, DWARF NO. 6145. America's Sweetheart! Supreme in flavor and keeping qualities. Young bearing. Thrive anywhere.

No. 6104—McINTOSH, RED. DWARF NO. 6147. GIANT NO. 6165. Extra hardy, strong long lived trees. Fruit uniformly well shaped and colored. Juicy, full flavored. Especially recommended for Northern States.

No. 6112—STAYMAN'S WINESAP. GIANT NO. 6166. The extra large, hardy Winesap. Fine for eating or cooking. Good keeper.

No. 6118—NORTHWEST GREENING. Keeps until spring. Excellent for eating or cooking after Xmas. Bears young.

No. 6116—JONATHAN—DARK RED. DWARF NO. 6149. Most profitable apple in many localities. Heavy, consistent bearer of rich, juicy, tart, good keeping apples.

No. 6111—RED ROME BEAUTY. Large, juicy, pleasantly flavored red winter apple. Excellent for eating or cooking. Good keeper. Vigorous, hardy, and a heavy yielder. Bears young.

No. 6101—CRIMSON WINESAP. Large, very dark red, full flavored. Excellent for eating or cooking. Best for late storage. Best Winesap for home or commercial orchards.

No. 6103—GRIMES' GOLDEN. Golden yellow apple with firm, white flesh, and sparkling, cidery flavor. Not recommended in severe climates.

SUMMER APPLES

No. 6102—DUCHESS. Best and hardiest red summer apple. Tart. Fine for cooking, sauce, pies, apple butter, etc.

No. 6110—ANOKA. An extra hardy variety, bears young. Bright yellow fruit striped with red. Excellent for cooking. Often bears 2 or 3 years after planting.

No. 6123—RED JUNE. A very good early summer sweet red apple. Perfectly hardy. Fruit is bright red with crisp, white flesh. Excellent for eating and cooking.

QUINTUPLET APPLE TREES

5 Varieties—all in one strong tree. Have an apple orchard in your own back yard. If you have room for only one or two trees, here is an opportunity to have 5 different kinds of apples ripening at different times, all on one tree. Red and yellow apples—Fall and Winter apples.

FALL APPLES

No. 6105—WEALTHY. The favorite Red Fall Apple—delicious flavor, extra juicy. Very hardy, excellent keeper.

No. 6113—YELLOW TRANSPARENT. GIANT NO. 6164. Bears very young. Big crops, juicy, full flavored apples in early fall.

CRAB TREES

No. 6124—WHITNEY. A wonderful large early crab for eating, canning or pickling. Tree very hardy, bears very young.

BERRY TREE SIZES

COMMERCIAL SIZE. Being lower priced, usually preferred for large Orchard planting. 3/5 ft. tall, $\frac{1}{8}$ to $\frac{1}{4}$ in. diameter. Extra value at Berry's prepaid prices that save you at least 20%.

HOME ORCHARD SIZE. Strong $\frac{1}{8}$ to $\frac{1}{4}$ inch diameter—4/6 ft. tall. Very well branched and well rooted.

QUICK CROP SIZE. 5/7 ft. tall— $\frac{1}{4}$ to 1 inch diameter—extra heavily branched and well rooted. Plant this size for better results.

GIANT SIZE. 5/7 ft. tall. $\frac{1}{4}$ to 1 inch diameter. These extra large, sturdy trees will bear crops quicker.

DWARF SIZE. 3/4 ft. tall. $\frac{1}{8}$ inch diameter. Grow only 8 to 10 ft. tall. Fine for limited space.

See Page 60 for further description on Giant and Dwarf size trees.
